Roseville Fire Implements GIS to Streamline Planning for Emergency Response

Track: EMS, Fire, Disaster Management

Author(s): Paul Keating

Roseville City Fire Department has implemented GIS technology to strategically plan for growth and assess our standards of coverage. Roseville is one of Northern California's fastest growing cities. GIS has been crucial in the city's station placement resource allocation study. Roseville City Fire is currently conducting a review of its "Standards of Coverage." GIS is proving invaluable in assessing the areas of greatest risk and place the resources where they are needed.
