Streamlining Map Production

Clint Loveman

The cartographic workflow

Overview of cartographic workflow

- **Planning**

- Which message needs to be communicated?
- Why does the map need to be created?
- What are your design controls?

- **Data**

- Which data supports the objective?
- Does the data support cartography?
- Is the data available?

Overview of cartographic workflow

- **Symbology**

- Is the data qualitative or quantitative?
- Do symbol standards exist?
- Which type of symbols best meet the objective?

- **Layout**

- Which page size should be used?
- Landscape or portrait page orientation?
- Is there a standard layout or template?
- Will multiple maps be needed?

- **Output**

- How will the map be delivered?

Planning – Map Scale

Area of Interest
(AOI)

Small
scale

Large
scale

Planning - Coordinate System

Map objective

Area of interest

Select GCS

Projection properties

Select PCS

Modify properties

Data

- **Selecting Existing Data**
 - Help orient the map reader?
 - Support the map objective?
 - Explain the distribution of other data?

Creating cartographic Data

- Manual
- Derived

Basemap layers

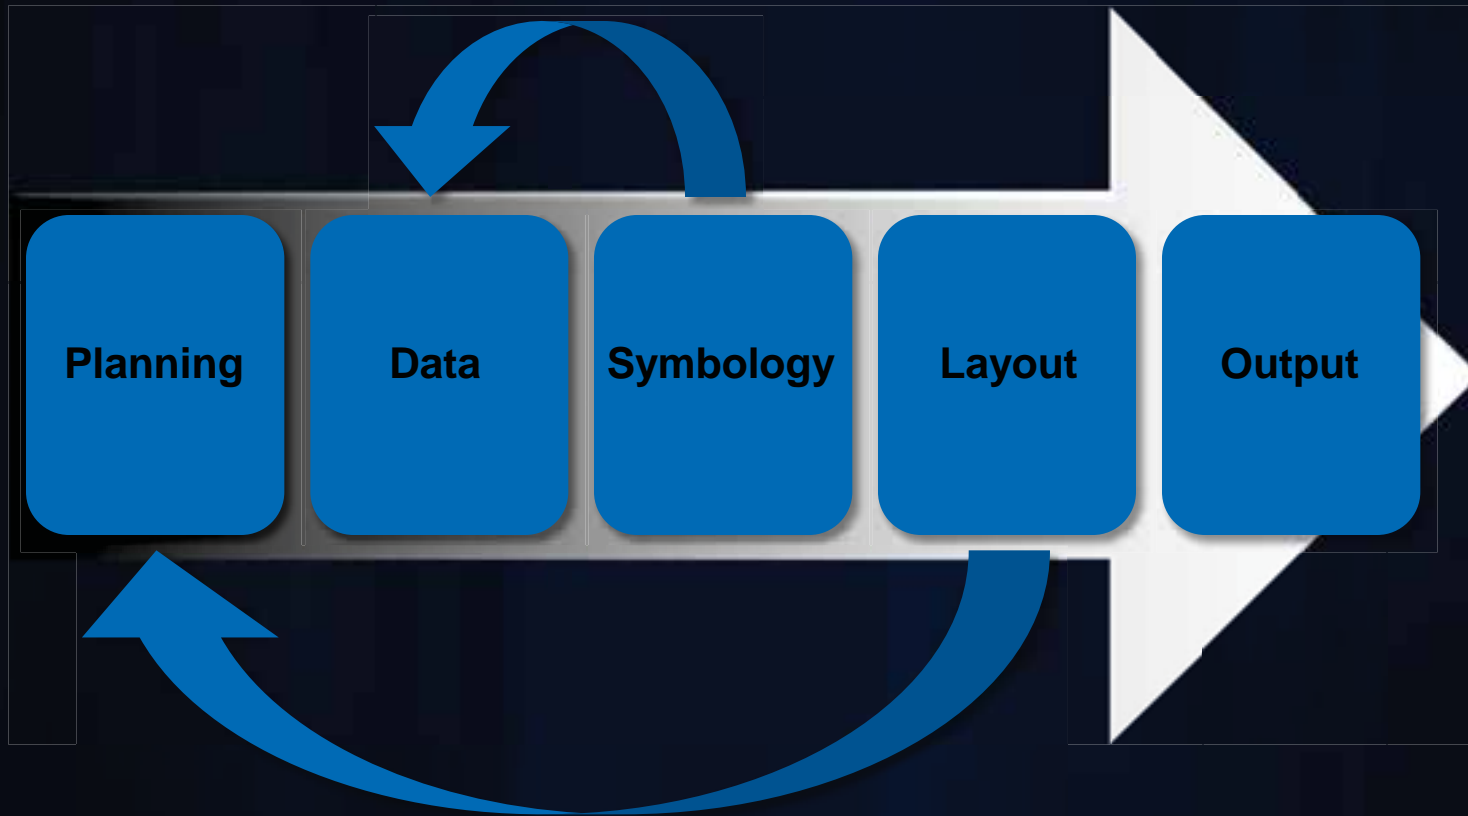

Streets
Cities
Boundaries

Operational layers

Water pipes
Valves
Fire perimeter

The cartographic workflow

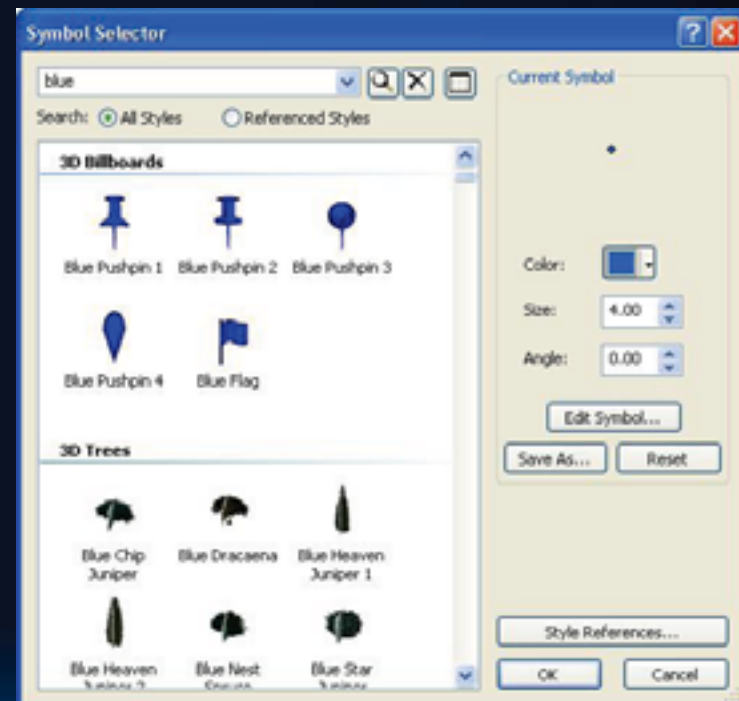

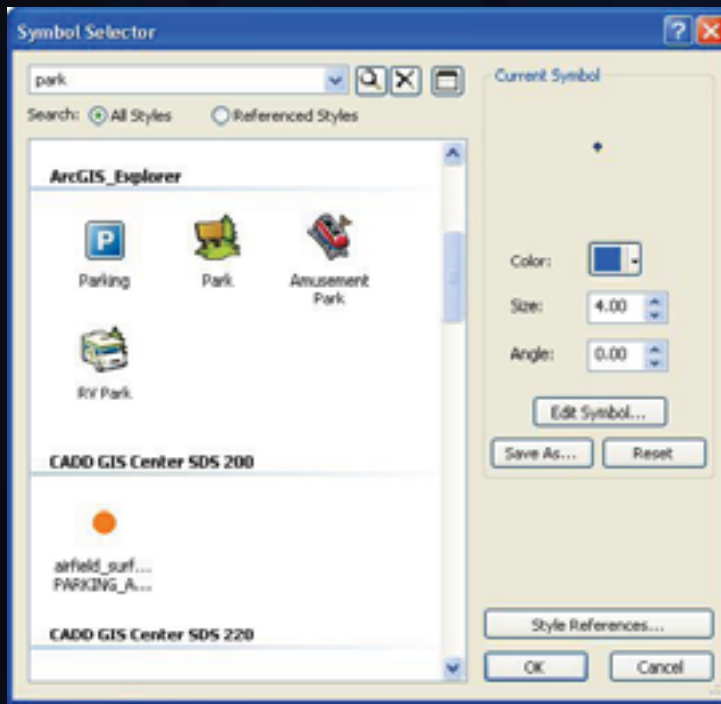

Planning and Data

Symbology – Search Styles

- All or Referenced styles
- Symbol names and tags
- Common search strings “color”

Symbology – Symbolization methods

Crop Acres by County

Graduated Colors

2005 – 2030 Growth of Housing Units

Proportional Symbols

Number of Farms by County

Graduated Symbols

Symbology – Symbolization methods

Acres of Cropland

Dot Density

City of Yakima Traffic Safety Analysis

Charts

Troop-Contributing Countries to United Nations Missions

Multiple Attributes

- Contributing country
- Non-contributing country

- Broadside collisions
- Rear-end collisions
- All other collisions
- Non-intersection collisions

Size of chart related to Broadside collisions

 Peak hour traffic count

Symbology – Feature Class Representations

Symbol enhancement and masking

Create geometric effects

Create custom symbols

Control clipping of fill symbols

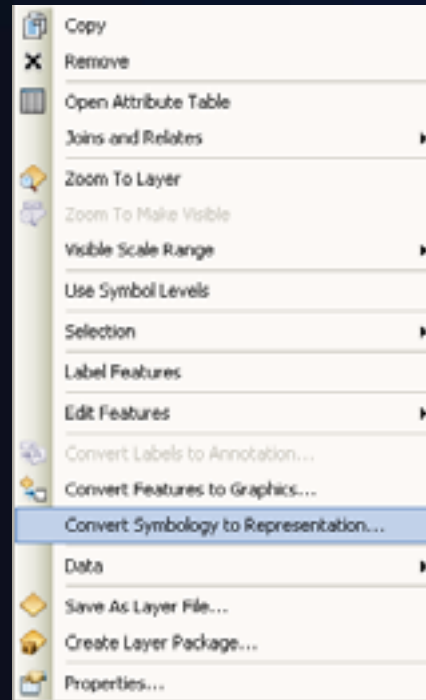

Move symbology independently of geometry

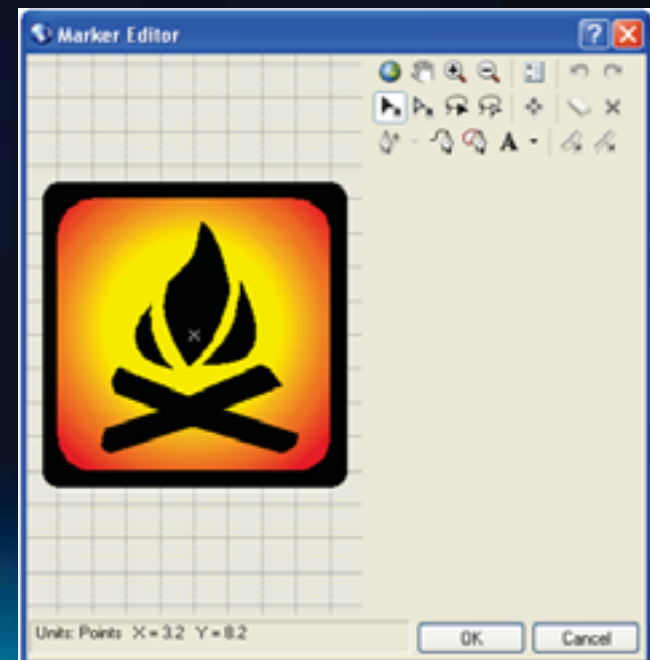

How to Make Representations

- **Conversion**
 - Layer in TOC

- **Style Manager or Layer**
 - Representation Rule Editor
 - Marker Editor
- **When and Why?**

Symbology – Visual Specifications

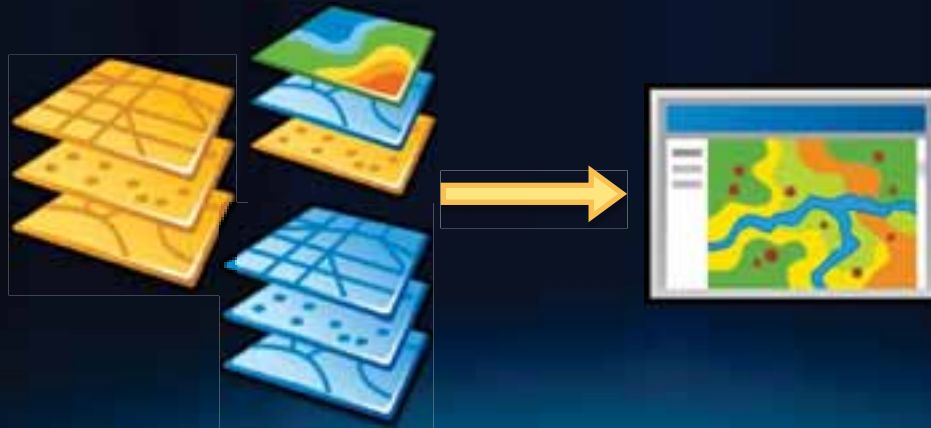

- **Production Mapping Extension**
 - **Manage representations across many layers**
 - **Link feature attribution to representation rules**
 - **Apply symbology using relational queries**
 - **Single production workflow for symbology and text**

Symbology – Views

- **Production Mapping Extension**
 - **Centralized Data Frame and Layer settings**
 - **Stored and managed in a geodatabase**
 - **Allow maps settings within a single document to be updated quickly**

Symbology

Layout – Elements

- Supplement the geographic information
- Insert menu & Drawing toolbar
 - Data frame, titles, north arrows, scale bars, etc...
- Production Mapping Extension
 - Graphic table
 - Topographic
 - Declination diagram (north arrow)
 - UTM Grid reference

Layout – Page Management

- **Scroll Bars; Rules, Guides and Grids**
 - View menu
- **Production Mapping Extension**
 - Element window
 - list of elements for centralized management
 - Layout rules
 - Relational placement of surround elements

Layout – Document Management

- **Data Driven Pages**

- Single layout
- Index feature layer
- Multiple pages based on feature extents

- **ArcPy**

- Update symbology
- Change data source
- Map export

Layout – Document Management

- **Production Mapping Extension**

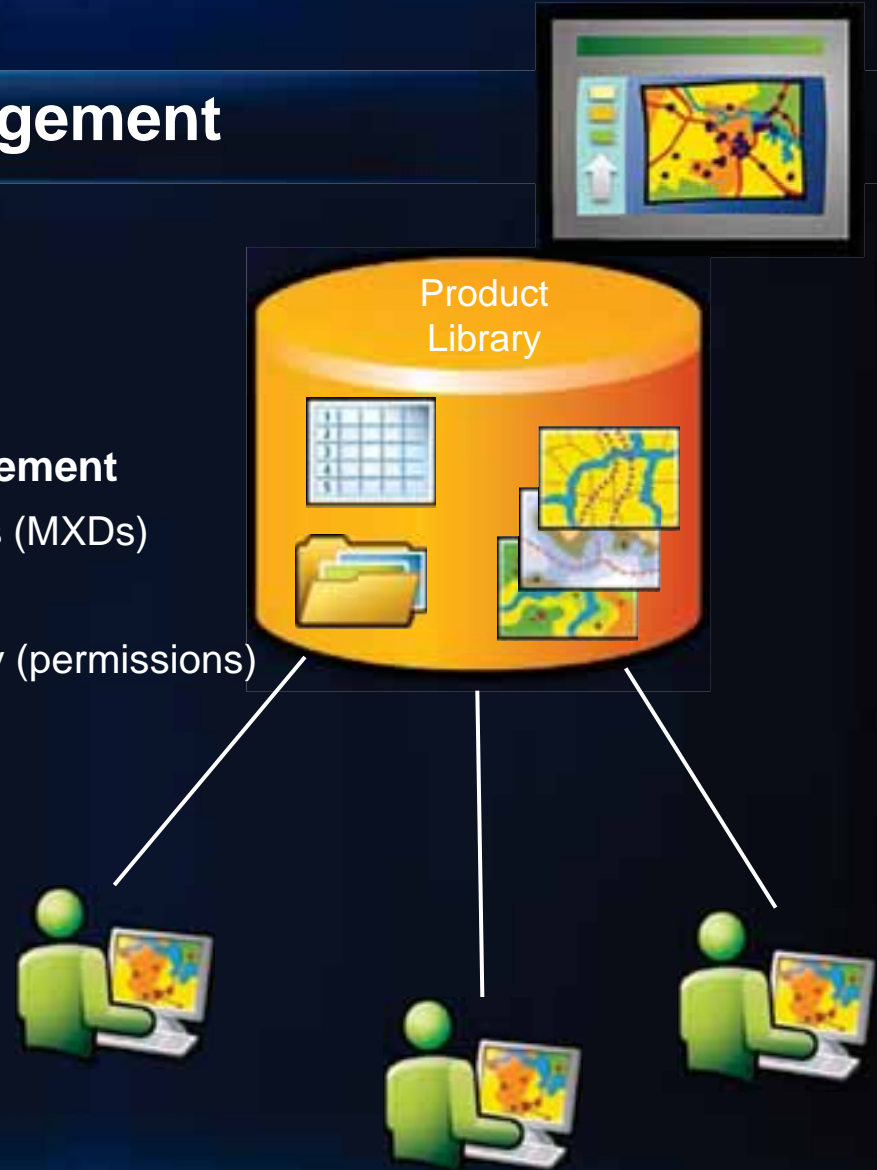

- **Product Library**

- **Spatial enabled document management**

- Map Sheets & Data Driven Pages (MXDs)
- Associated documents
- Check in/out, undo, get local copy (permissions)
- Versions
- Searching

- **Centralized business rules**

- Cartographic display
- Data quality rules
- Data editing and attribute display

Output

- **ArcPy**
 - **Export**
 - PDF Multipage support
- **Production Mapping Extension**
 - **Layout GeoTIFF**
 - **Color Separation**
 - Raster TIFF
 - Vector EPS Spot Color

Layout and Output

Product Information

- Enables high volume, high quality production
- Facilitates standard, repeatable workflows
