ArcGIS Runtime SDK for iOS & OS X

Build native applications
using Objective-C & Swift

OS X (Mountain Lion, Mavericks, Yosemite, El Capitan)

iOS (6.x, 7.x, 8.x, 9.x)

Before you begin...

- **Mac**
 - **OSX 10.9, 10.10, 10.11**
(Mavericks, Yosemite, El Capitan)
- **Xcode 5.x, 6.x, 7.x**
 - Apple's iOS & OSX SDKs
 - iOS Simulator
 - Instruments
- **ArcGIS Runtime SDK**
 - iOS - Latest release : **Version 10.2.5**
 - OS X - Latest release : **Version 10.2.4**

DEMO 1 - SDK Resources

ArcGIS Runtime SDK for iOS

[Install the SDK](#) [Download SDK](#)

Version 10.2.5 August 2015

[Home](#) [Guide](#) [API Reference](#) [Sample Code](#) [Forum](#)

Build mapping apps for iOS devices

Get the SDK that lets you build native iOS apps with Swift & Objective-C. Integrate a wide range of mapping and GIS capabilities online or offline, including editing, geocoding, routing, and data visualization.

Quartz Beta

Be among the first to test-drive newly released features in this Beta!

[Check out the Beta](#)

[Install the SDK](#) | [Release notes](#) | [System requirements](#) | [View samples](#) | [What you get](#)

Add a map to your app

Use the ArcGIS Runtime SDK for iOS to create your mapping app and deploy it

View sample code

Access samples and fork the repo on GitHub to jump start your app development project.

Use ArcGIS basemaps

Build an app to switch basemaps and display map content from ArcGIS services, Bing Maps, Open

Display Map Content

Displaying a Map

- UI Component : **AGSMapView**
 - Responds to gestures
 - Touch
 - Trackpad
 - Mouse
 - Keyboard
 - In-built Magnifier & Callout
 - Displays device location
 - Auto pan for location updates

A Map is composed of Layers

Sources of map data

- **Tiled layers – subclasses of AGSTiledLayer**
 - **ArcGIS Map Services (Cached), OGC WMTS, Bing, OpenStreetMap**
 - Fetch pre-cached tiles from services and assemble on screen
 - Extremely fast. Good for static data.
- **Dynamic layers - subclasses of AGSDynamicLayer**
 - **ArcGIS Map Services, ArcGIS Image Services, OGC WMS**
 - Generate map images from service on-demand.
 - Good for changing data, or customizing map display
- **Feature layers – AGSFeatureLayer**
 - **ArcGIS Feature Services**
 - Download raw features and draw natively on screen
 - Good for editing

Layer pattern

1. Construct & Connect

- URL to web service

```
//Construct layer
```

```
let tiledLayer = AGSTiledMapServiceLayer(URL: serviceUrl)
```

1. Add to mapview

```
//Add to map view
```

```
self.mapView.addMapLayer(tiledLayer, withName:"World Street Map")
```

Web Maps

- Author on ArcGIS Online or on-premise ArcGIS Portal
 - Predefined list of layers
 - Initial map configuration
 - Extent, scale range, symbology etc
- AGSWebMap
 - Creates layer objects when opened into mapview

```
//Create webmap
self.webmap = AGSWebMap(itemId: "b31153c71c6c429a8b24c1751a50d3ad", credential:nil)

//Open into mapview
self.webmap.openIntoMapView(self.mapView)
```

Popup Configuration

- Popups make it easy to view
 - Attributes
 - Graphs, Charts
 - Attachments
 - Picture
 - Video
 - PDF/MS-Office attachments

Demo 2 – Display map

San Diego Map

OS X sample app - popups

Xcode

- load a webmap
- fetch popups
- show popups

Searching for Content

Common workflows

Searching for Content

ArcGIS Online
Portal

Search Portal /
ArcGIS Online

Search for Places

Search for Features

Searching on Portals

Webmap

Tile Layer

Map Image Layer

Feature Layer

Create portal

```
let url = NSURL(string: "http://maps.arcgis.com")
let credential = AGSCredential(user: "john_doe", password: "<password>")
self.portal = AGSPortal(URL: url, credential: credential)
```

Searching for content

Searching on Portals

Adopt protocol

```
class MyViewController: UIViewController, AGSPortalDelegate {  
    ...  
}
```

Set delegate

```
self.portal.delegate = self
```

Searching ArcGIS Org or Portal

Create Query Parameters

Predefined Queries

```
//1. Searching for groups based on its owner or a title.  
let queryParams = AGSPortalQueryParams(forGroupsWithOwner: "<username>", title: "<title>")  
  
//2. Searching for all items in a group.  
let queryParams = AGSPortalQueryParams(forItemsInGroup: "<group_id>")
```

Custom Queries

```
//Define the query criteria  
let queryString = "title:\"San Francisco\" AND type:\"tile package\" "  
//Create the query params object  
let queryParams = AGSPortalQueryParams(query: queryString, limit: 10)
```

Searching ArcGIS Org or Portal

Execute Queries

```
portal.findGroupsWithQueryParams(queryParams)  
portal.findItemsWithQueryParams(queryParams)
```

Query Results – Async Callback

```
func portal(portal: AGSPortal!, operation: NSOperation!, didFindGroups resultSet: AGSPortalQueryResultSet!) {  
    //process group results  
}  
  
func portal(portal: AGSPortal!, operation: NSOperation!, didFindItems resultSet: AGSPortalQueryResultSet!) {  
    //process item results  
}
```

Demo 3 – Search portal

iOS – Portal Explorer

Query parameters – text

Find items with query parameters

Found items

Displayed the map

ArcGIS Online
Portal

Search Portal /
ArcGIS Online

Search for Places

Search for Features

Searching for content

Search for Places

- Geocode Service
 - http://<server>/ArcGIS/rest/services/Locators/ESRI_Geocode_USA/GeocodeServer
- Geocoding – Address to Locations
- Reverse Geocoding – Locations to Addresses

Create locator

```
let locator = AGSLocator(URL: url)
locator.delegate = self
```

Set delegate

Search for Places

Geocoding

Set Parameters

```
let address = [{"Address": "380 New York St", "City": "Redlands", "State": "CA", "Zip": "92373"}]
```

Execute

```
locator.locationsForAddress(address, returnFields: outFields)
```

Search for Places

Delegate Methods for Results

```
func locator(locator: AGSLocator!, operation op: NSOperation!, didFindLocationsForAddress candidates: [AnyObject]!) {  
    //AGSAddressCandidate Objects  
}
```

Handle Geocoding Results

- Address Candidate objects
 - Location
 - Attributes
- Display in Map

Demo 4 - Geocoding

OS X – Geocoding
Source Code

- Locator Task
- Delegate
- Text Parameters
- Execute
- Results

OS X – Offline Geocoding

ArcGIS Online
Portal

Search Portal /
ArcGIS Online

Search for Places

Search for Features

Searching for content

Search for Features

In a single layer

Query Task

At a map location

Identify Task

Searching for content

Search for Features

- Single layer or table
- ArcGIS Map Service, Feature Service
- Query for Features, ObjectIDs

Query Task

Create a Query task

```
let url = NSURL(string: "http://<server>/<instance>/services/<service>/MapServer/<layer_or_table_ID>")
let queryTask = AGSQueryTask(URL: url)
queryTask.delegate = self
```

Search for Features

Types of Queries

Attribute Query - Attributes of the layer
- *where, outFields etc*

Statistics - *Count, Std Dev etc*
- *Group By*

Spatial Query - Input geometry
- *Intersects, Within, Touches etc*

Temporal Query - Input time extent

Order By - Attributes
- Asc or Desc

Related Features - Relationship query

Search for Features

```
let query = AGSQuery()

//Attribute Query
query.whereClause = "POPULATION > 1000000"
query.outFields = ["STATE_NAME", "POP2010"]

//Spatial Query
let env:AGSEnvelope = ...
query.geometry = env
query.spatialRelationship = .Intersects

//Temporal Query
let start:NSDate = ... //Dec 3, 2014
let end:NSDate = ... //Mar 17, 2015
let time_period = AGSTimeExtent(start: start, end: end)
query.timeExtent = time_period

queryTask.executeWithQuery(query)
```

```
func queryTask(queryTask: AGSQueryTask!, operation op: NSOperation!, didExecuteWithFeatureSetResult featureSet: AGSFeatureSet!) {
    //Query Results.
}
```

Search for Features

- Multiple layers
- ArcGIS Map Service

Identify Task

Create Identify Task

```
let url = NSURL(string: "http://<server>/<instance>/services/<service>/MapServer")
let identifyTask = AGSIdentifyTask(URL: url)
identifyTask.delegate = self
```

Searching for content

Search for Features

Identify Task Parameters

layerIDs
tolerance
spatialReference
layerOption
size
geometry
mapEnvelope
returnGeometry

Execute Identify Task

```
identifyTask.executeWithParameters(identifyParams)
```

Demo 5 – Query Task

OS X – Query
Source Code

- Query Task
- Delegate
- Query - Parameters
- Execute
- Results

ArcGIS Online
Portal

Search Portal / ArcGIS Online

Find featured maps
Find Items/Groups
Predefined/Custom queries

Search for Places

Geocoding

Search for Features

Query Task
Identify Task
Graphic

Searching for content

Recap: Task Pattern

1. **Construct & Connect.**
 - URL to web service
 - File path or App Bundle
2. **Assign** a delegate
3. **Set up** input parameters. **Invoke.**
4. **Process** results in the delegate.

Route Analysis

- Plan routes - **AGSRouteTask**
 - Point to Point, or multi-point
 - Optimize based on distance or travel time
 - Reorder stops for best sequence
 - Time windows, Barriers & Restrictions
- Compute service areas - **AGSServiceAreaTask**
- Find closest facilities – **AGSClosestFacilityTask**

- ArcGIS Online World Route service
 - 100+ Countries. Live & Historical Traffic data
 - Requires subscription. Consumes credits
- On-premise Route services for custom data

Spatial Analysis

- **AGSGeoprocessor**
 - Invoke geoprocessing services
- **ArcGIS Online Spatial Analysis service**
 - Summarize Data (Aggregate points, etc)
 - Analyze Patterns (Watershed, Viewshed, etc)
 - Use Proximity (Density, HotSpot, Interpolate, etc)
- **On-premise Geoprocessing services**
 - Custom geoprocessing tools & models

Editing

Editing

Feature Layer Feature Layer
in webmap

What **layer** is required for Editing?

ArcGIS Server ArcGIS Online/Org Portal Developers Site

What are possible Feature Layer **sources**?

Spatial Features Non-Spatial Tables Related Records Time Aware

What **types** of features can be edited?

Online Offline

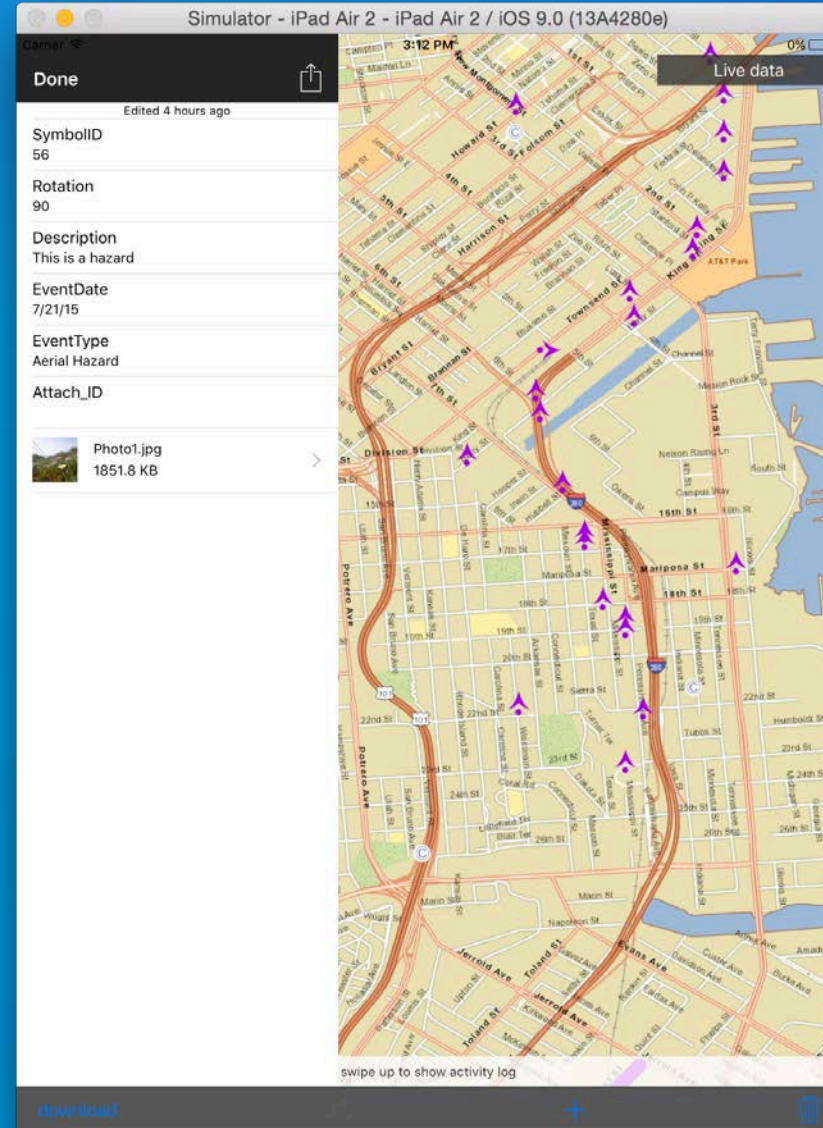

What are available Editing **modes**?

Popups

Display Feature Information

Edit Attributes & Attachments

Edit Geometry through Sketch Layer

Popups

Editing

Editor Tracking

- *User & Timestamp of Create/Update*

Ownership Based Access Control

- *Limit editing depending on user*

Capabilities

- *Limit editing for all users*

Data Validation

- *Non null, Coded and Range Values etc*

Popups handle all this!

Sketch Layer

Create, Edit Geometries

Interactive

No Code *almost!*

Geometry used for Feature Layer Editing

Demo 6 – Online Editing

iOS – Feature Layer Editing

Source Code

- Sketch Layer
- Touch Delegates
- Popup Delegates

Offline

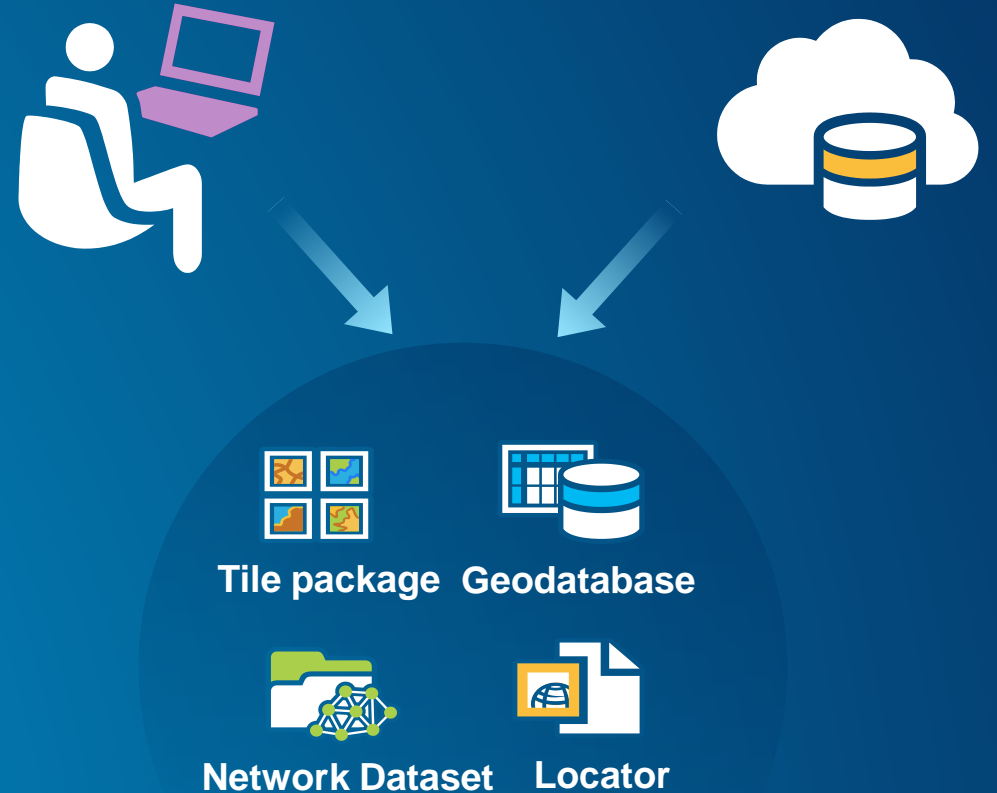

Patterns for generating offline content

- **Desktop Pattern**

- Package data through ArcMap or Pro
- Side load onto device, or bundle in application

- **Services Pattern**

- Extract data from services on-the-fly
 - Tile package - `AGSDownloadTileCacheTask`
 - Geodatabase - `AGSGDBSyncTask`

Offline Mapping

- **View & Interact with maps**
 - Display Tile package - *AGSLocalTileLayer*
 - Display Geodatabase - *AGSFeatureTableLayer*
 - Query using SQL or spatial criteria
 - Edit existing or create new features
- Layer pattern remains the same
 1. **Construct & Connect**
 - Path to local data
 2. **Add to mapview**

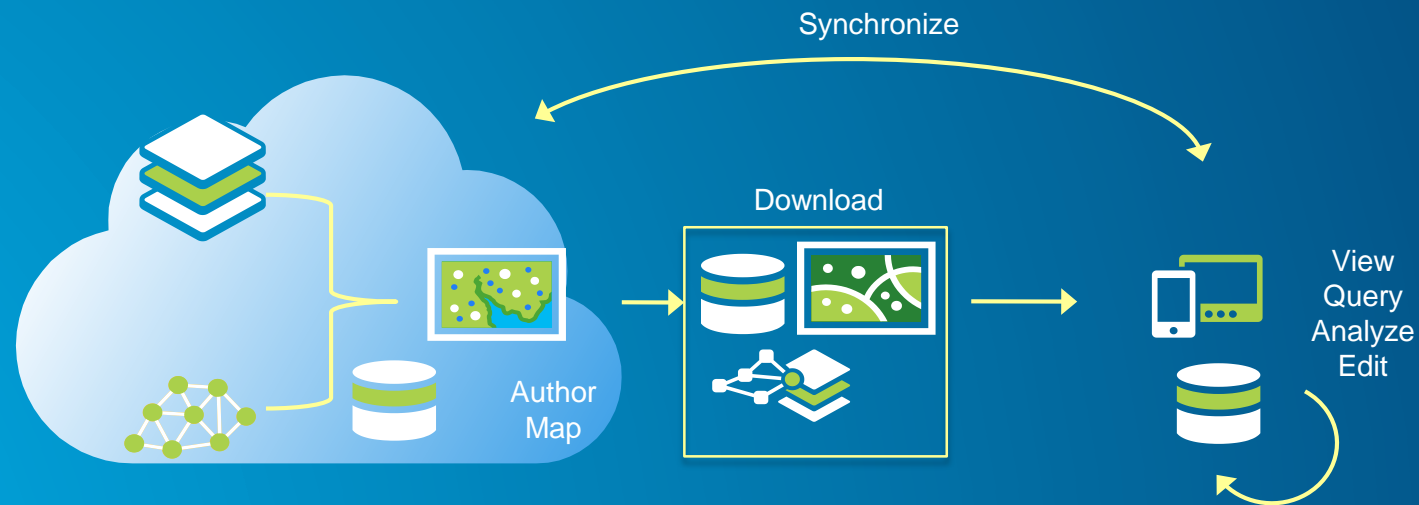

Offline Analysis

- Find addresses
 - AGSLocator using Locator files
- Get directions
 - AGSRouteTask using Network dataset
- Task pattern remains the same
 1. **Construct & Connect.**
 - Path to local data
 2. **Assign** a delegate
 3. Set up input parameters. **Invoke.**
 4. **Process** results.

Offline Editing

- Edits persisted in the geodatabase on the device
- Changes can be synchronized with the service
 - Upload only, Download only, or Bidirectional

Offline

Geocoding

Routing

Feature Editing (Offline Session)

Quartz

What's coming?

ArcGIS Runtime Quartz

Numbers were not working, so we picked something solid, sharp and shiny...

Quartz

- **Major release**

- Many new capabilities
- New and changed APIs
- Improved internal architecture

- **Goals**

- Support the ArcGIS Platform
- Synchronize APIs across all ArcGIS Runtime platforms

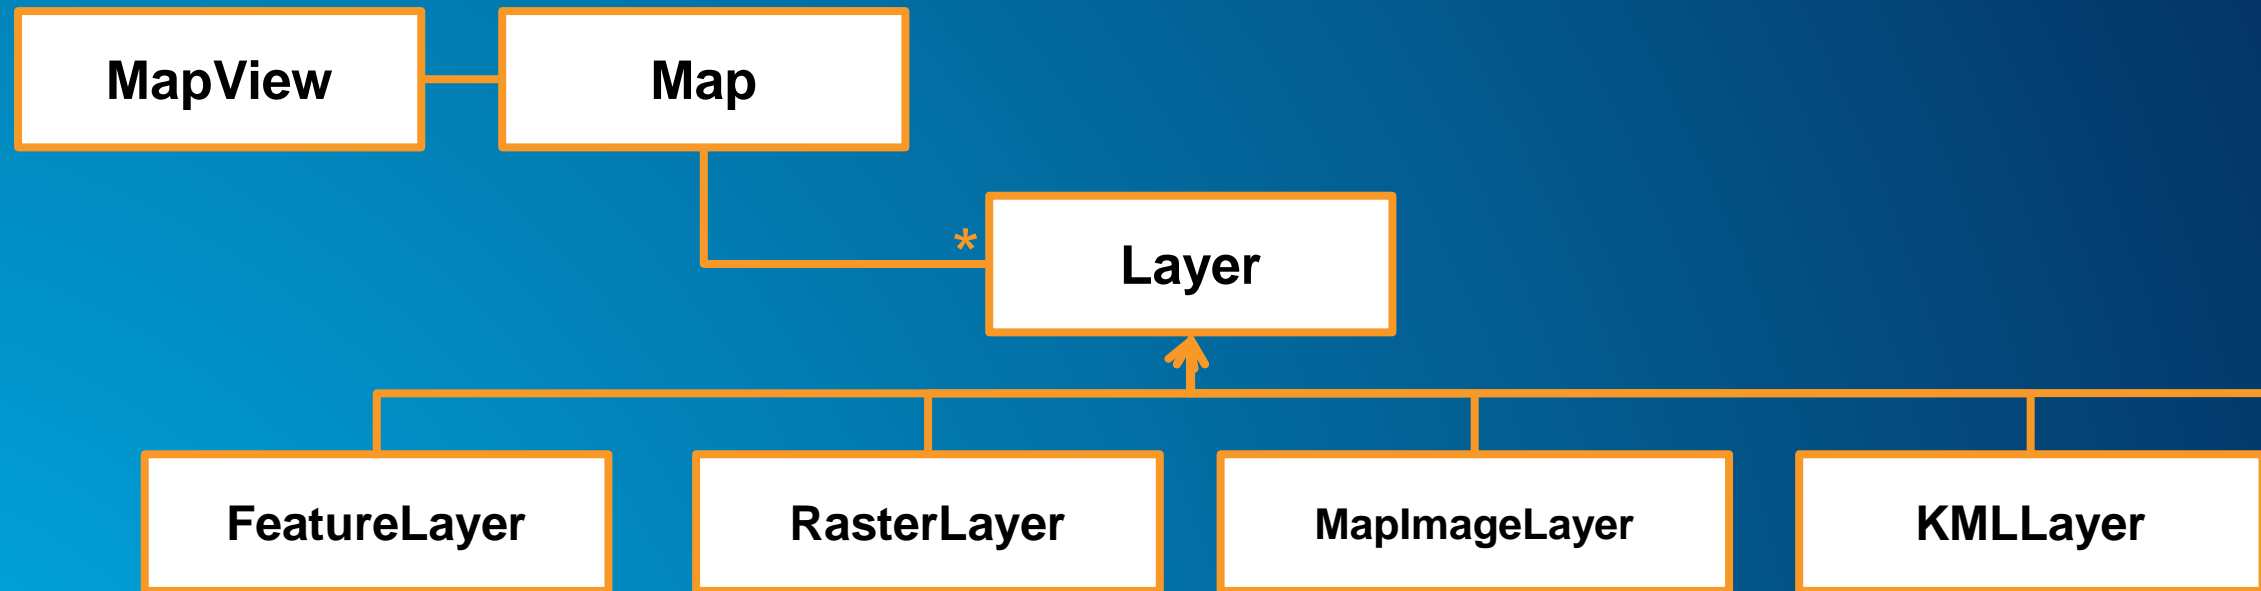

What does Quartz API include?

- Full map authoring support
- Taking maps offline
- Maps offline
- Layers offline
 - Support for Local Data and data taken offline
 - Shapefiles, KML etc.
- Analysis offline
- 3D content

All this requires new and changed apis...

What does Quartz mean for iOS & OS X?

- **SWIFT 2 integration**
 - Generics, Nullability, Kind Of, Error handling
 - Dynamic and Static frameworks
 - Bitcode
- **Better SDK features**
 - iOS interactive sample app
 - Inline editing
- **Target tvOS**
- **Apple in 2016?**
