

Esri International Developer Summit  
Palm Springs, CA

# Publishing and Using Map Services with ArcGIS for Server

Craig Williams, Ty Fitzpatrick, & Tanu Hoque

# Agenda

- **Platform overview**
- **Publishing services**
  - Demo: Publishing hosted feature service
  - Demo: Publishing in the enterprise
- **Map services and dynamic layers**
  - Demo: Dynamic layers including data upload
- **Standardized queries with services**
- **Questions**

# The ArcGIS Platform

- Online / Portal
- Desktop
- Server
- Mobile
- Developer
- Solutions

# Publishing services

# Information Sharing is Critical

*Transparency and easy information access are now expected...*

# Sharing as Services

Professional to Everyone

- Our goal: make it easier to share GIS resources
  - Unified sharing experience
  - Comprehensive analysis
  - Sharing to servers in the enterprise, cloud, and to ArcGIS Online / Portal

# Vision

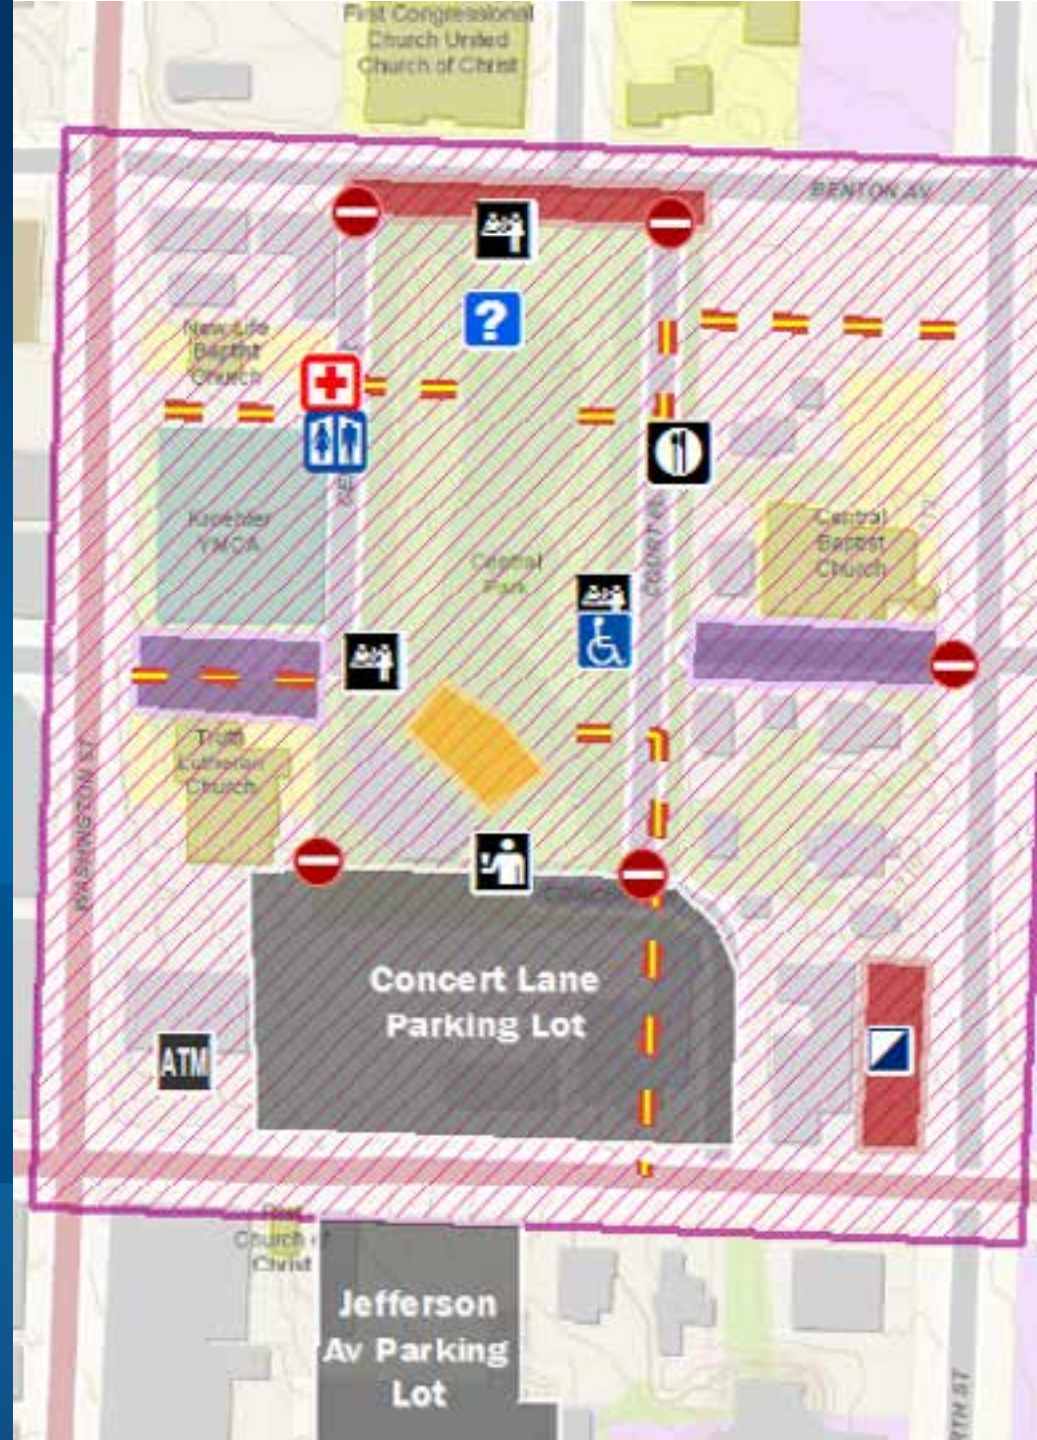

# Sharing as Services

# Sharing Layers Online

Hosted feature services

# Hosted Mapping on ArcGIS Online

- **Sharing the easy way**
  - **No Server to buy, install, or maintain**
  - **Scales automatically**
  - **No Firewall or IT issues**
- **Limitations**
  - **Only Tiled Map and Feature Services supported**
  - **Data is private to each service**

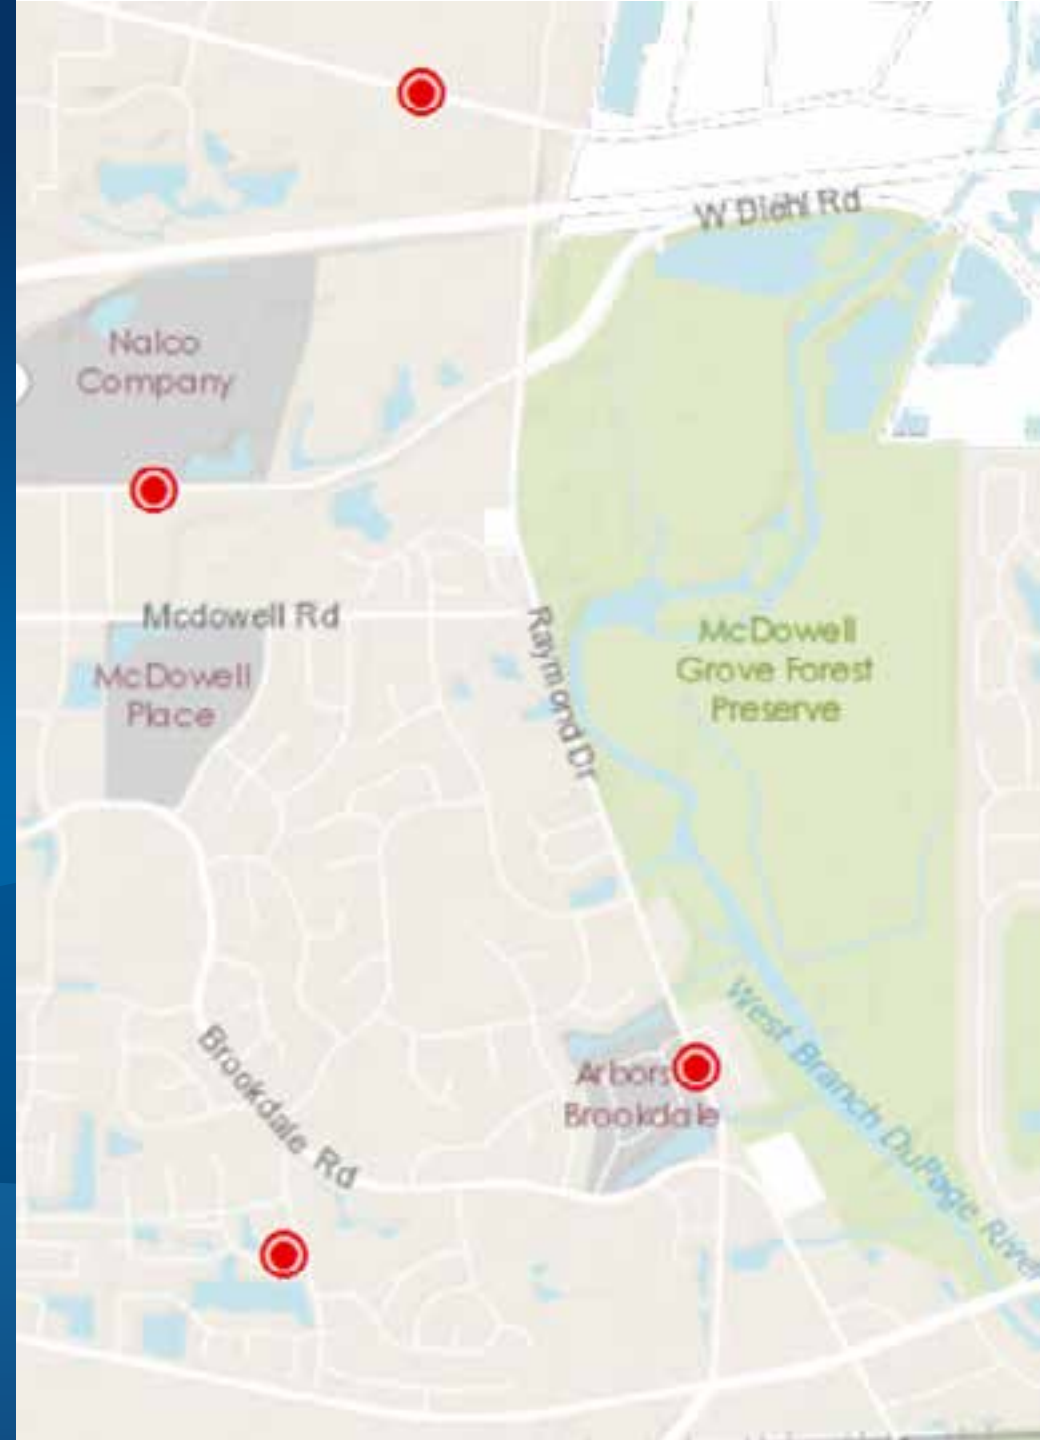

## Service Definition (.sd)

- **File format for publishing all services**
  - For all services (Map, Geoprocessing, etc.)
- **Contains everything required to create a service:**
  - GIS resources (Map, Globe, etc.)
    - embeddable fonts (if needed)
  - Service Configuration
  - Data (if it needs to be copied to the server)
- **Uploaded to the server when publishing**
- **Can be saved and published later**
  - Using Catalog or Server Manager

# Sharing Layers in the Enterprise

ArcGIS Server feature service shared via Portal

# ArcGIS Server in the Enterprise

- **Recent improvements**
  - Successful publishing of shared data
  - Comprehensive analysis
  - Simple publishing with copying of data
- **When to use?**
  - Need the full functionality of ArcGIS Server
  - Want full control over all hard and software
  - Want to publish services on live, shared data

# ArcGIS Server Data Stores

- **Server has a list of registered Data Stores**
- **Data Store is of type**
  - Enterprise Geodatabase
  - Folder
    - **Tip:** register top-most folder level possible for maximal benefit
- **Access to the Data Store is validated during registration**
  - On all machines in the site
- **Replicated data stores for separate data instances**
  - **Tip:** Read Help Topic [About registering your data with the server](#)

*Data Stores are a key concept for publishing to ArcGIS Server*

# Map Services: Dynamic layers, statistics, queries

# Review of Map Services Since ArcGIS 10.1

- **One unified map service**
  - An updated optimized map service
  - Supports additional capabilities, data types, layers, renderers
- **New extension capabilities:**
  - Network Analysis
- **New approach for Geoprocessing results**

# Dynamic Layers: The Concept

- **Capability with the map service that allows for per-request changes to the map**
  - **Optional capability of map services**
- **Allows for:**
  - **Updating renderers and symbols**
  - **Removing and reordering layers**
  - **Changing layer data sources**
  - **Adding new layers from registered data sources**

# Dynamic Layers: Use Cases

- **Simple updates to the map service**
  - Remove layers or reorder layers
- **Thematic mapping**
  - Updates to renderers
- **Adding content to the map service**
  - Add data from registered workspaces
    - Including query layers
- **Add to the map on a per-request basis**
  - ArcGIS APIs handle this for you

# Thematic Mapping

- **Special case of dynamic layers supported via**
  - Ability to change renderer
  - Ability to change data sources – including joins
  - Map service API for constructing renderer classes
- **Generate renderer operation**
  - Supports class breaks and unique value class generation
  - Popular classification types from ArcGIS for Desktop

# Thematic Mapping

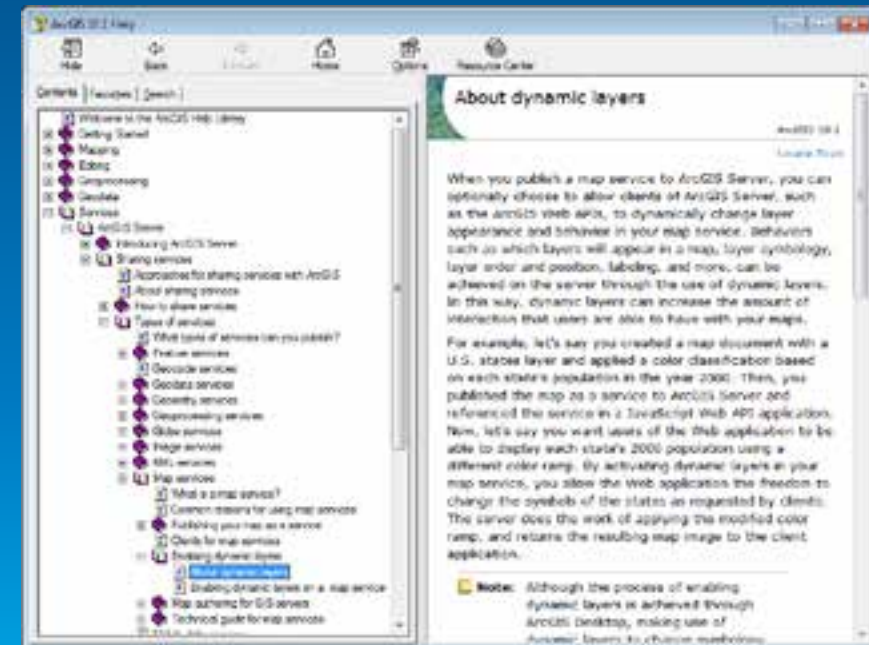

## When to use?

- **When do I use dynamic layers instead of feature layers on the client for thematic mapping?**
  - large number of features
  - complex geometries that cannot be generalized
  - when it provides a performance advantage
- **Each approach has tradeoffs**
  - e.g. Client side features scale better and provide more interactive behavior
  - Generate renderer can be used with both approaches

# Dynamic Layers

## More Information

- See the topic [About dynamic layers](#) in the ArcGIS Server help
- REST API – See the [Dynamic Layer / Table](#) resource help

## Query in Map Services

- Support for order by, output statistics, and group by statistics was added for both layers / tables
  - count | sum | min | max | avg | std dev | var
- Optional ability to return M and Z values for features
- Can query a specific geodatabase version
- Query response contains a flag when maxRecordCount was reached by the query

# Database Agnostic Way to Query

Standardized Queries - Introduced at ArcGIS 10.2

- **One SQL syntax runs against all databases!**
  - e.g. one date query syntax --- YEAH!
- **Based on SQL92 query syntax and functions**
  - Does not accept any DB vendor specific queries
- **StandardizedQuery is turned on by default**
- **Limitations at 10.2**
  - Only a subset of functions available
  - Not supported for
    - Joined table/layer from multiple workspaces or OLE DB tables
- **Server level property**
  - To switch back:
    - <http://<server>/arcgis/admin/system/properties/update>
    - {"standardizedQueries":"false"}

# Dynamic Layers

How to enable dynamicLayer?

Change layer's renderer

Add new layer

Use client side data with map service

Query layer

- 2000 Population Density
- White Population
- Total Household
- Avg Household Size
- African American Populat
- Asian Population
- Hispanic Population
- Multi Race Population
- Male Population
- Female Population
- Age < 5
- Age 5-17
- Age 18-21
- Age 22-29
- Age 30-39
- Age 40-49
- Age 50-64
- Age 65+
- Total Households
- Avg Family Size
- Vacant Housing Units
- Owner Occupancy

# Enabling Dynamic Layers

The screenshot shows the ArcGIS Server Manager interface. The top window is the 'Service Editor' for a service named 'Counties2'. The 'Mapping' tab is active, showing the REST URL: `http://tanu9:6080/arcgis/rest/services/Counties2/MapServer`. Below this, the 'ArcGIS Server Manager' window is open, showing the 'Services' tab. The 'Editing: Site (root) > Counties' path is visible. The 'Capabilities' tab is selected in the left sidebar. The main area shows the 'Select and configure capabilities' section with the following options:

- Mapping (always enabled)
- WMS
- Schematics
- WCS
- Feature Access
- Mobile Data Access

Below this is the 'Operations Allowed' section with the following options:

- Map
- Query
- Data

The 'Dynamic Workspaces' section has the following option checked:

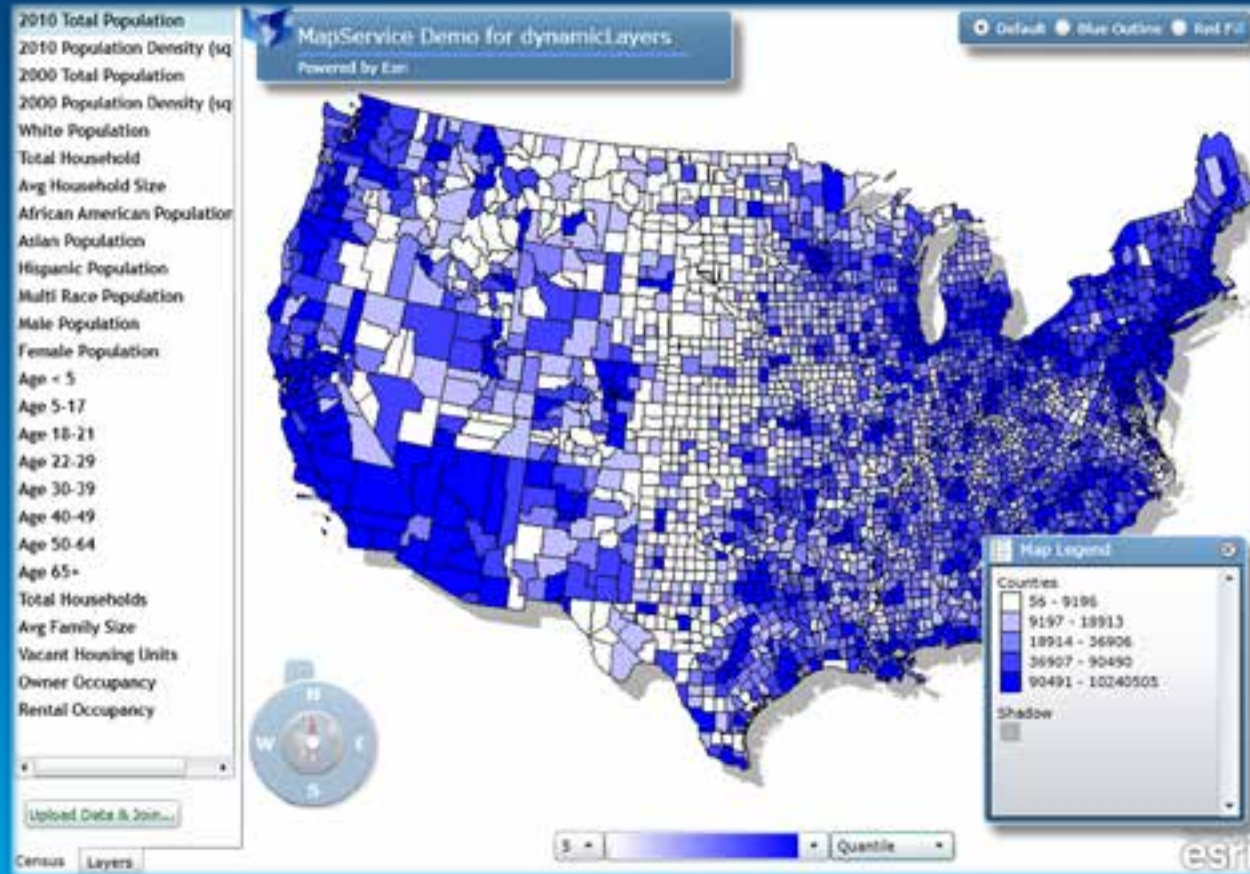

- Allow per request modification of layer order and symbology

To register a database, file geodatabase, shapefile or raster workspace, click Add

Workspace ID	Type	Connection String
fgdb_county	FileGDB	Show Connection String

# Demo #1: Modify Drawing Info

# Dynamic Layers: Generate Renderer

REST request

<http://esriurl.com/5978>

<http://.../MapServer/2/generateRenderer?>

```
classificationDef = {  
  "type": "classBreaksDef",  
  "classificationField": "POP2007",  
  "classificationMethod": "esriClassifyQuantile",  
  "breakCount": 5,  
  "colorRamp": {  
    "type": "algorithmic",  
    "fromColor": [255, 255, 255, 255],  
    "toColor": [0, 0, 255, 255 ],  
    "algorithm": "esriCIELabAlgorithm"  
  }  
}
```

# Dynamic Layers: Update Renderer

REST request

<http://esriurl.com/5979>

`http://.../Census/MapServer/export?....&`

```
dynamicLayers = [ {  
  "source": {  
    "type": "mapLayer",  
    "mapLayerId": 0  
  },  
  "drawingInfo": {  
    "renderer": {  
      "type": "classBreaks",  
      "field": "POP2007",  
      "classBreakInfos": [ ... ]  
    }  
  }  
}
```

# Dynamic Layers: Generate Renderer

JavaScript API

<http://esriurl.com/5968>

1 `var generateRenderer = new  
esri.tasks.GenerateRendererTask("http://serv../cens/MapServer/2");`

2 `var params = new esri.tasks.GenerateRendererParameters();  
params.classificationDefinition = classDef;`

3 `generateRenderer.execute(params, applyRenderer, errorHandler)`

# Dynamic Layers: Update Renderer

JavaScript API code

<http://esriurl.com/5973>

1

```
generateRenderer.execute(params, applyRenderer, errorHandler);
```

```
function applyRenderer(renderer) {
```

```
    var drawingOptions = new  
    esri.layers.LayerDrawingOptions();
```

2

```
    drawingOptions.renderer = renderer;
```

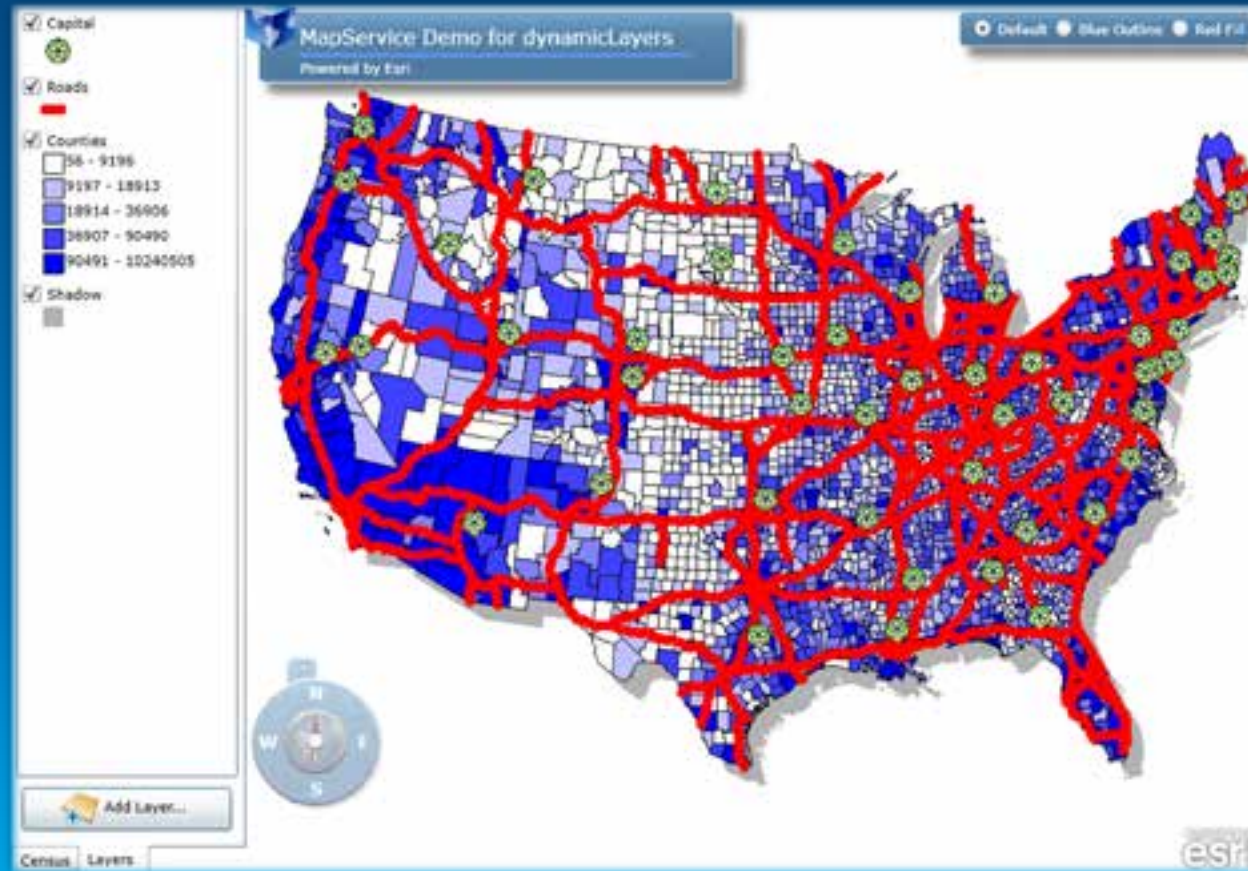

```
    optionsArray[2] = drawingOptions;
```

```
    usaLayer.setLayerDrawingOptions(optionsArray);
```

```
    usaLayer.show();
```

```
}
```

## Demo #2: Add New Layer

# Dynamic Layers: Add Layer from Registered Workspace

REST request

<http://esriurl.com/5980>

`http://.../USA/MapServer/export?....&`

```
dynamicLayers = [ {  
  "id": 104,  
  "source": {  
    "type": "dataLayer",  
    "dataSource": {  
      "type": "table",  
      "workspaceId": "MyDatabaseWorkspaceIDSSR2",  
      "dataSourceName": "ss6.gdb.Lakes"  
    }  
  },  
  "drawingInfo": {...}  
} ]
```

# Dynamic Layers: Add Layer from Registered Workspace

JavaScript API code

<http://esriurl.com/5974>

1

```
var dynamicLayerInfos =  
usaLayer.createDynamicLayerInfosFromLayerInfos();
```

2

```
var dataSource = new esri.layers.TableDataSource();  
dataSource.workspaceId = "MyDatabaseWorkspaceIDSSR2";  
dataSource.dataSourceName = "egdb.DBADMIN.USLakes";  
var layerSource = new esri.layers.LayerDataSource();  
layerSource.dataSource = dataSource;
```

3

```
var dynamicLayerInfo = new esri.layers.DynamicLayerInfo();  
dynamicLayerInfo.source = layerSource;
```

4

```
dynamicLayerInfos.splice(0, 0, dynamicLayerInfo);  
usaLayer.updateDynamicLayerInfos(dynamicLayerInfos);
```

# Demo #3: Use Client Side Data

Blog: <http://esriurl.com/5993>

Click browse button to pick a csv file containing atleast 2 fields - one named FIPS (used for joins) and a numeric field.

Here is a [sample data in CSV format](#) to be used with the predefined renderer

E:\Projects\10\F\Blog\1.

Use Renderer:

Predefined for [Population Change data](#)

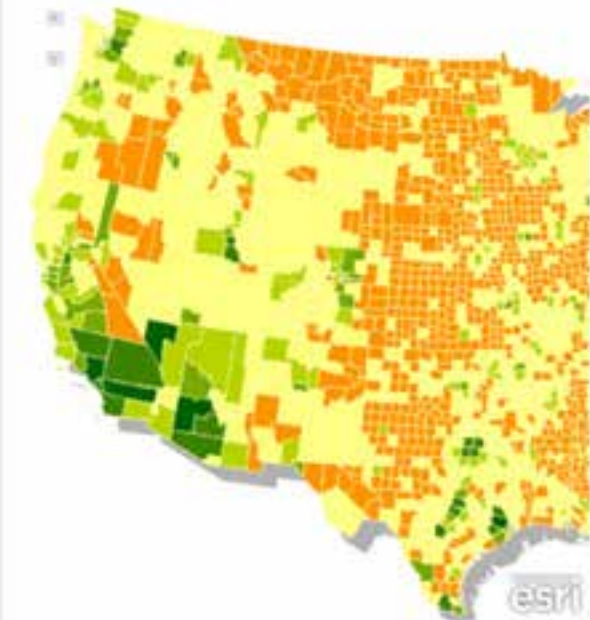

Auto Generated

**US Counties**

Counties

	< -35,000
	-15,000 - 0
	0 - 15,000
	15,000 - 55,000
	55,000 - 150,000
	150,000 - 500,000
	> 500,000

# Dynamic Layers: Add Query Layer

REST request

<http://esriurl.com/5982>

```
http://.../USA/MapServer/export?....&
dynamicLayers = [ {
  "source": {
    "type": "dataLayer",
    "dataSource": {
      "type": "queryTable",
      "workspaceId": "MyDatabaseWorkspaceIDSSR2",
      "query": "SELECT * FROM ss6.gdb.Lakes",
      "oidFields": "objectid",
      "geometryType": "esriGeometryPolygon",
      "spatialReference": { "wkid": 4326 }
    }
  },
  "drawingInfo": {...} } ]
```

# Dynamic Layers: Add Query Layer

JavaScript API code

<http://esriurl.com/5977>

1

```
var dynamicLayerInfos =  
usaLayer.createDynamicLayerInfosFromLayerInfos();
```

2

```
var queryDataSource = new esri.layers.QueryDataSource();  
queryDataSource.workspaceId = "MyDatabaseWorkspaceIDSSR2";  
queryDataSource.query = "SELECT * FROM ss6.gdb.Lakes";  
queryDataSource.oidFields = ["objectid"] ;  
queryDataSource.geometryType = "polygon";  
queryDataSource.spatialReference = new esri.SpatialReference({wkid:4326});
```

3

```
layerSource.dataSource = queryDataSource;  
var dynamicLayerInfo = new esri.layers.DynamicLayerInfo();  
dynamicLayerInfo.source = layerSource;
```

4

```
dynamicLayerInfos.splice(0, 0, dynamicLayerInfo);  
usaLayer.setDynamicLayerInfos(dynamicLayerInfos);
```

## SQL Query to Compute Population Mean Center

```
select 1 as oid,  
       geometry::Point(  
           sum(a.shape.STCentroid().STX * b.Yr_1930) / sum(b.Yr_1930),  
           sum(a.shape.STCentroid().STY * b.Yr_1930) / sum(b.Yr_1930),  
           '102008') as shape  
from STATES as a  
       inner join  
           USPOP1900TO2013 as b  
on a.STATE_ABBR = b.STATE_ABBR
```

# Session Survey

- **Please fill out the survey for this session**
  - <http://www.esri.com/events/devsummit/session-rater>
  - Search by session name: *Publishing and Using Map Services with ArcGIS for Server*
- **Your comments help us with sessions for future conferences**

**Questions?**

Understanding our world.
