2009 ESRI Education User Conference July 11–14, 2009

Introduction to ArcGIS Online

Miriam Schmidts mschmidts@esri.com

Overview

- What is ArcGIS Online?
- What's new at 9.3.1?
- ArcGIS Online Membership System
- ArcGIS Online Base Maps, MS Virtual Earth
- Licensing
- Supported item types for Sharing
- Layer packages
- Current status

What is ArcGIS Online?

 A system for sharing, finding and using GIS content across the Web

- ArcGIS Online includes the following features:
 - A search engine for geographic information
 - A system for storing and sharing geographic information online
 - Base maps and GIS tools from ESRI and the GIS community
 - Simple Web maps, Web applications, and online SDKs
 - A community of users
 - Online resources

What's new at 9.3.1?

New Base Map Services

- -Virtual Earth services for all ArcGIS products
- Topo Maps and World Imagery
- Demographics and BA reports
- Image services
- Map templates
- Data downloads

• New Location Services

- Geocoding, Routing, Drive Time services

New and Updated Online SDKs

-JavaScript, Flex, and Silverlight

New Community GIS Feature

- Explore, share, and create GIS resources
- -Lightweight, online GIS

ArcGIS 9.3.1 Layer Packages

- Single compact file that is easily shared
- Create using ArcGIS Desktop (ArcMap and ArcGlobe)
- Use in ArcGIS Desktop and ArcGIS Explorer
- Share via E-mail, network, DVD, or ArcGIS Online

ArcGIS Online Membership System

ArcGIS Online is a membership system

- -Register your global account
- Login to use it
- Membership has privileges
 - -You control access to items you share
 - You are granted access to items shared by others
 - You join and share information using groups
 - Organizations self-administer their own users and groups
- Anonymous use supported

ArcGIS Online Licensing

 ArcGIS Online is a product that you license and pay for. Some aspects/levels of the product are free, but others are not.

• Available to all ArcGIS users for free are:

- Base map services and layers from ESRI and the GIS community
- Online SDKs for developing web maps with JavaScript, Flex, Silverlight, etc.
- Search, item storage (limited), and group membership (requires registration)

• For purchase are:

- Subscription services to maps and GIS tasks
- Additional storage for geographic information sharing
- -Access to Web Mapping APIs (free for ArcGIS Server users)

ArcGIS and Virtual Earth (Bing Maps) services

- Global high-performance base maps and services seamlessly integrated with ArcGIS
 At 9.3.1 seamlessly integrated into ArcGIS
 Up-to-date, multi-scale base map (aerial imagery, roads, hybrid)
- Included at no cost with ArcGIS Desktop as part of maintenance
- Free, built-in, 90-day evaluation for ArcGIS Server
 - Free 90-day built-in evaluation
 - Includes .NET ADF and Web SDKs (Java Script, Flex and Silverlight)

ArcGIS Sharing

- Explore and Use maps published by ESRI and ArcGIS users
 Upload maps and register ArcGIS Server map services
- Share maps and data • Create online maps **Share with ArcGIS Online** Serve with **ArcGIS Server** 0 A 2 - 1 = Use with Layer packages ArcGIS Desktop/ Map templates Author with **Explorer/Web**

ArcGIS Desktop

Sharing – Supported item types

Maps

- ArcMap document (MXD)
- -ArcGIS Explorer Document (NMF)
- ArcGlobe Document (3DD)
- ArcScene Document (SXD)
- ArcReader Documents (PMF)
- -ArcGIS Explorer Custom Application (NCFG)
- Layers
 - -Layer file (LYR)
 - -Layer package (LPK)
 - ArcGIS Explorer Layer (NMC)
 - ArcGIS Server services (Map, Globe, Image, Geodata)

• Tools

- -ArcGIS Explorer Tools (EAZ)
- -ArcGIS Server services (Network Analyst, Geoprocessing, Geocoding)

Current Sharing Status

Public Beta Release planned for mid-June

- Application open to all users
- Registered users may store up to 1GB of content each for free
- Anticipate Beta Period of 3-4 Months

Full Release targeted for early Q4

- -Users may purchase and manage additional storage
- Organizations may administer their users

Questions?

Exercise overview

- Create an ArcGIS Online account
- Navigate ESRI base layers
- Create a web-map using ESRI base layers in combination with user-provided layers
- Geocode a table of addresses using an ArcGIS Online service
- Create and upload layer packages
