

# Improving Gas Equipment Inspections Using GIS

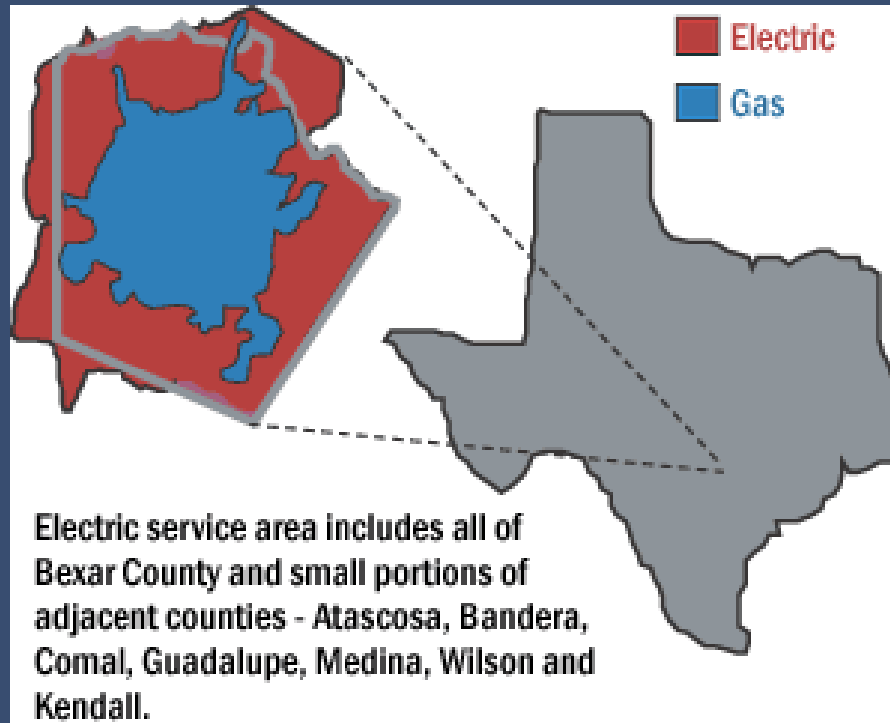

ArcFM Viewer , SAP, and  
Ventyx  
Integrations

Edward De Leon  
Enrique Figueroa

# San Antonio

# Highlights

- ◉ Nation's Largest Municipally Owned Utility serving Gas and Electric
- ◉ Over 330,000 Gas Customers
- ◉ 5155 miles of Distribution Gas Mains
- ◉ 90 miles of Transmission Gas Mains

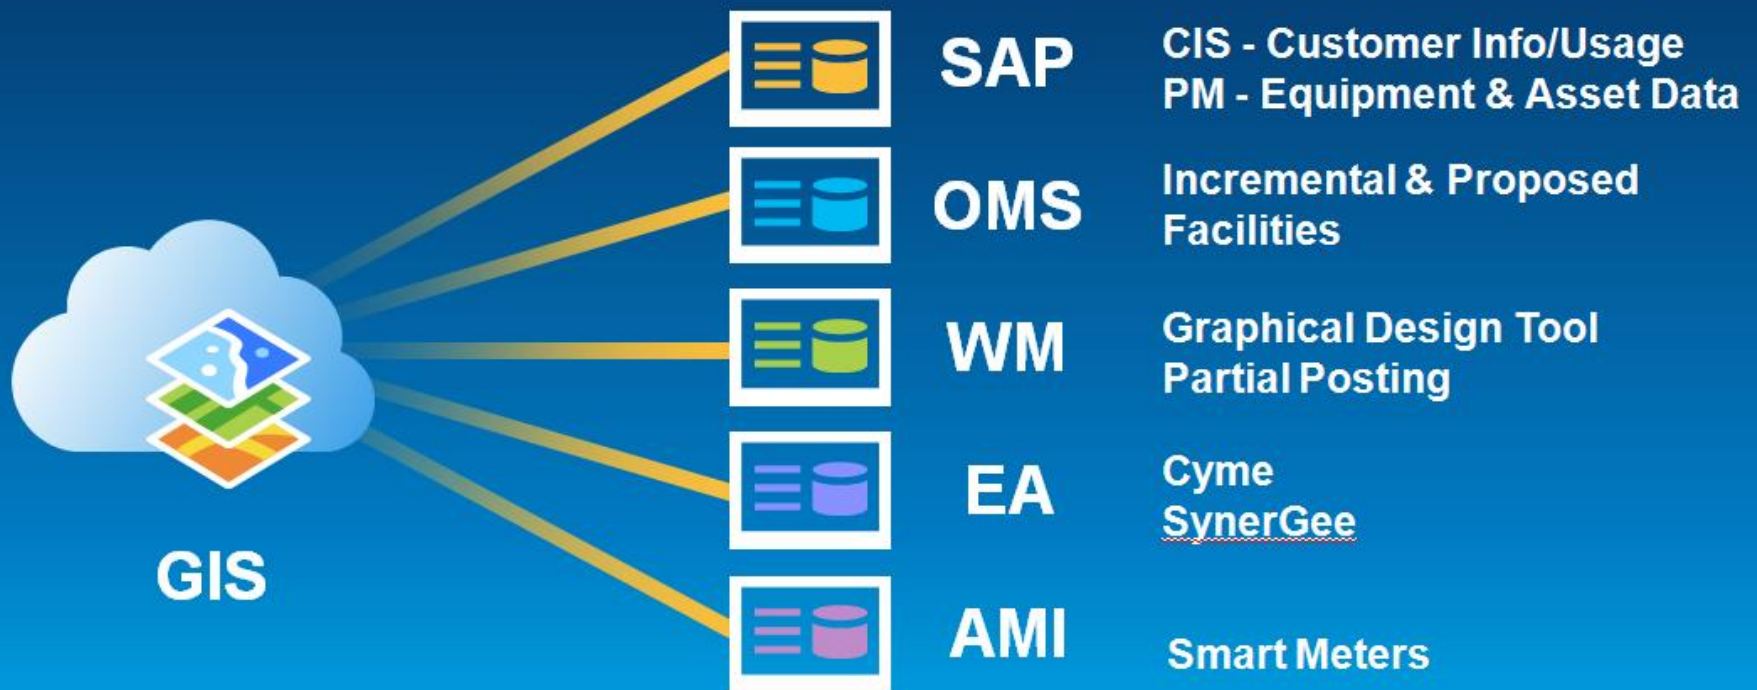

# Highlights

- 741,467 Electric Customers
- 12,506 miles of Distribution
- 1,511 miles of Transmission
- Schneider ArcFM Designer 9.3.1

# Interfaces

## Enterprise GIS & Spatial Integration

# Mobile GIS

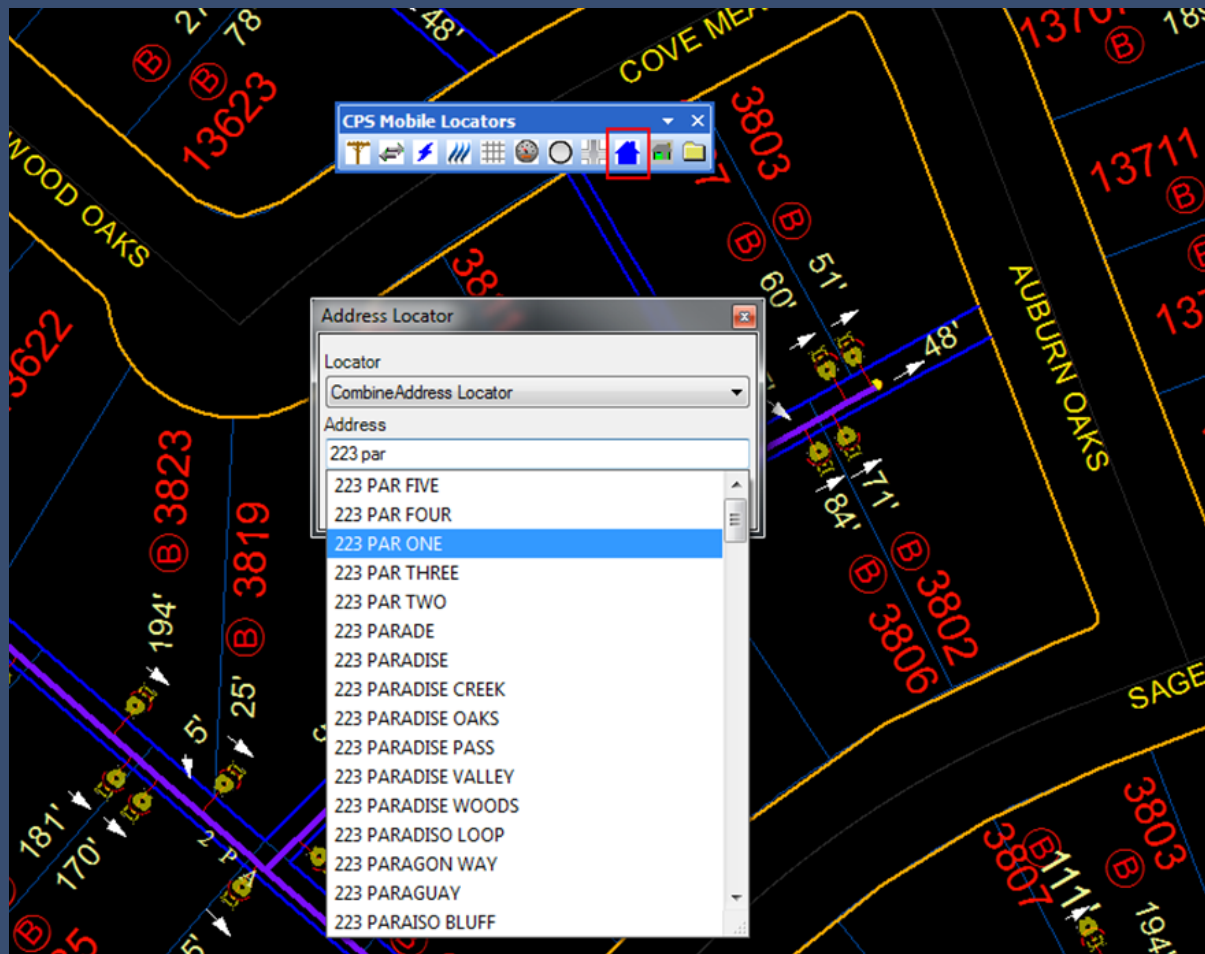

---

- Schneider's ArcFM Viewer
- Replication of Electric, Gas and Land
- Over 400 Mobile Users

# Locate by Address

# Memphis 2002

---

# Overview

---

- Mobile Data upgrade opportunity
- Utilize SAP PM
- ArcFM Viewer and Ventyx interface
- Store in Service Suite Historical DB

# Send Gas Data to SAP

## ➤ Added Gas Data to SAP PM process

1. Valves
2. Regulators
3. Odorizer Station

# Mobile Data Inspection Forms

---

- ◉ Carbon Monoxide Complaint
- ◉ Casing Vent
- ◉ System Regulator Inspection
- ◉ Valve Inspection

# Get Map Workflow

---

- Current Method
- Orders originate in SAP with a ping to GIS
- Orders Created in Service Suite
- Dispatched to Mobile User
- Option to Identify Orders on Map (Green House)

# Get Map Workflow

Mobile Application (CPS Energy)

# Get Map

# Why Extend the Ventyx / Schneider Integration?

---

- ◉ Take advantage of key application strengths
- ◉ Scheduling of maintenance activities through orders
- ◉ Deriving feature metrics e.g. what has or has not been inspected by planned inspection dates
- ◉ Deriving personnel performance metrics e.g. who has or has not met planned inspection dates

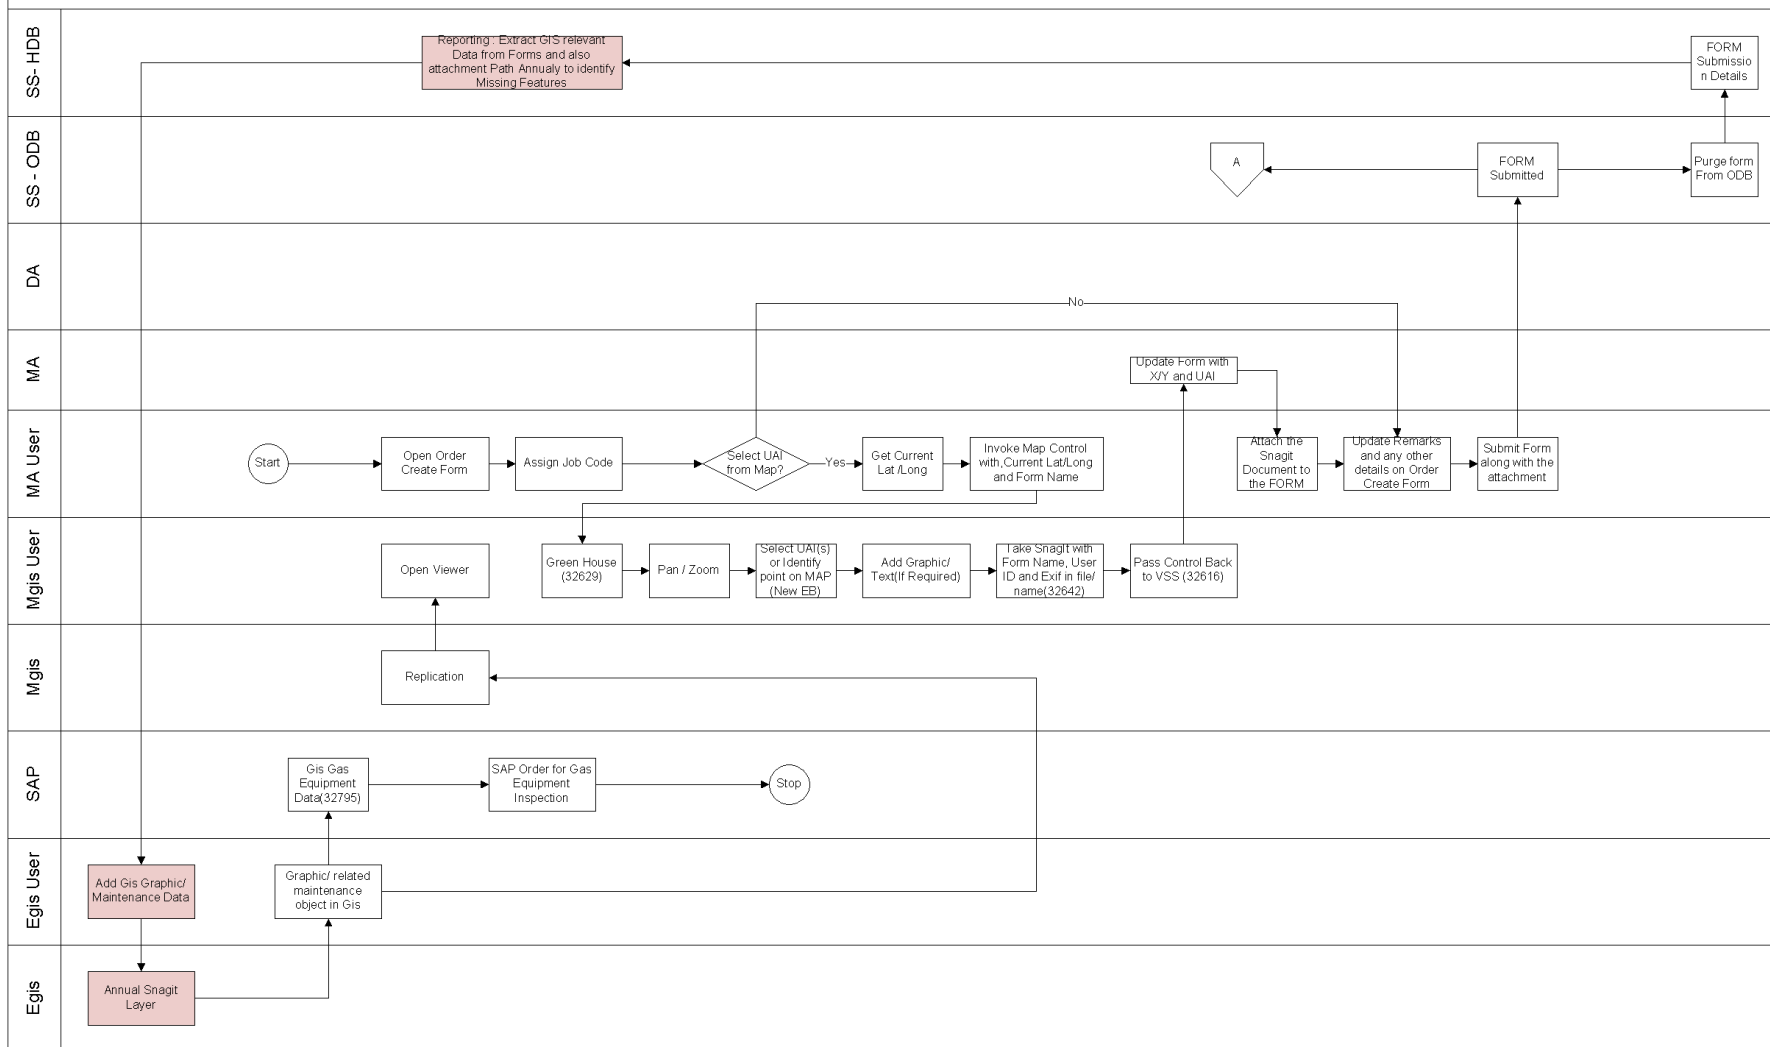

# Tech Order Create Workflow

---

- Modified Method
- Orders Created in Mobile Application by Field Tech
- Option to Select UAIs from Map. Forms are auto-created and filled with data from selection.
- Text and Graphic markups in ArcFM Viewer and Snagit for missing GIS features
- Route to Service Suite Historical DB
- Send Snagit with Exif to GIS

# Tech Order Create Workflow

MDS Upgrade Gas Maintenance Forms: Tech Order CREATE Workflow

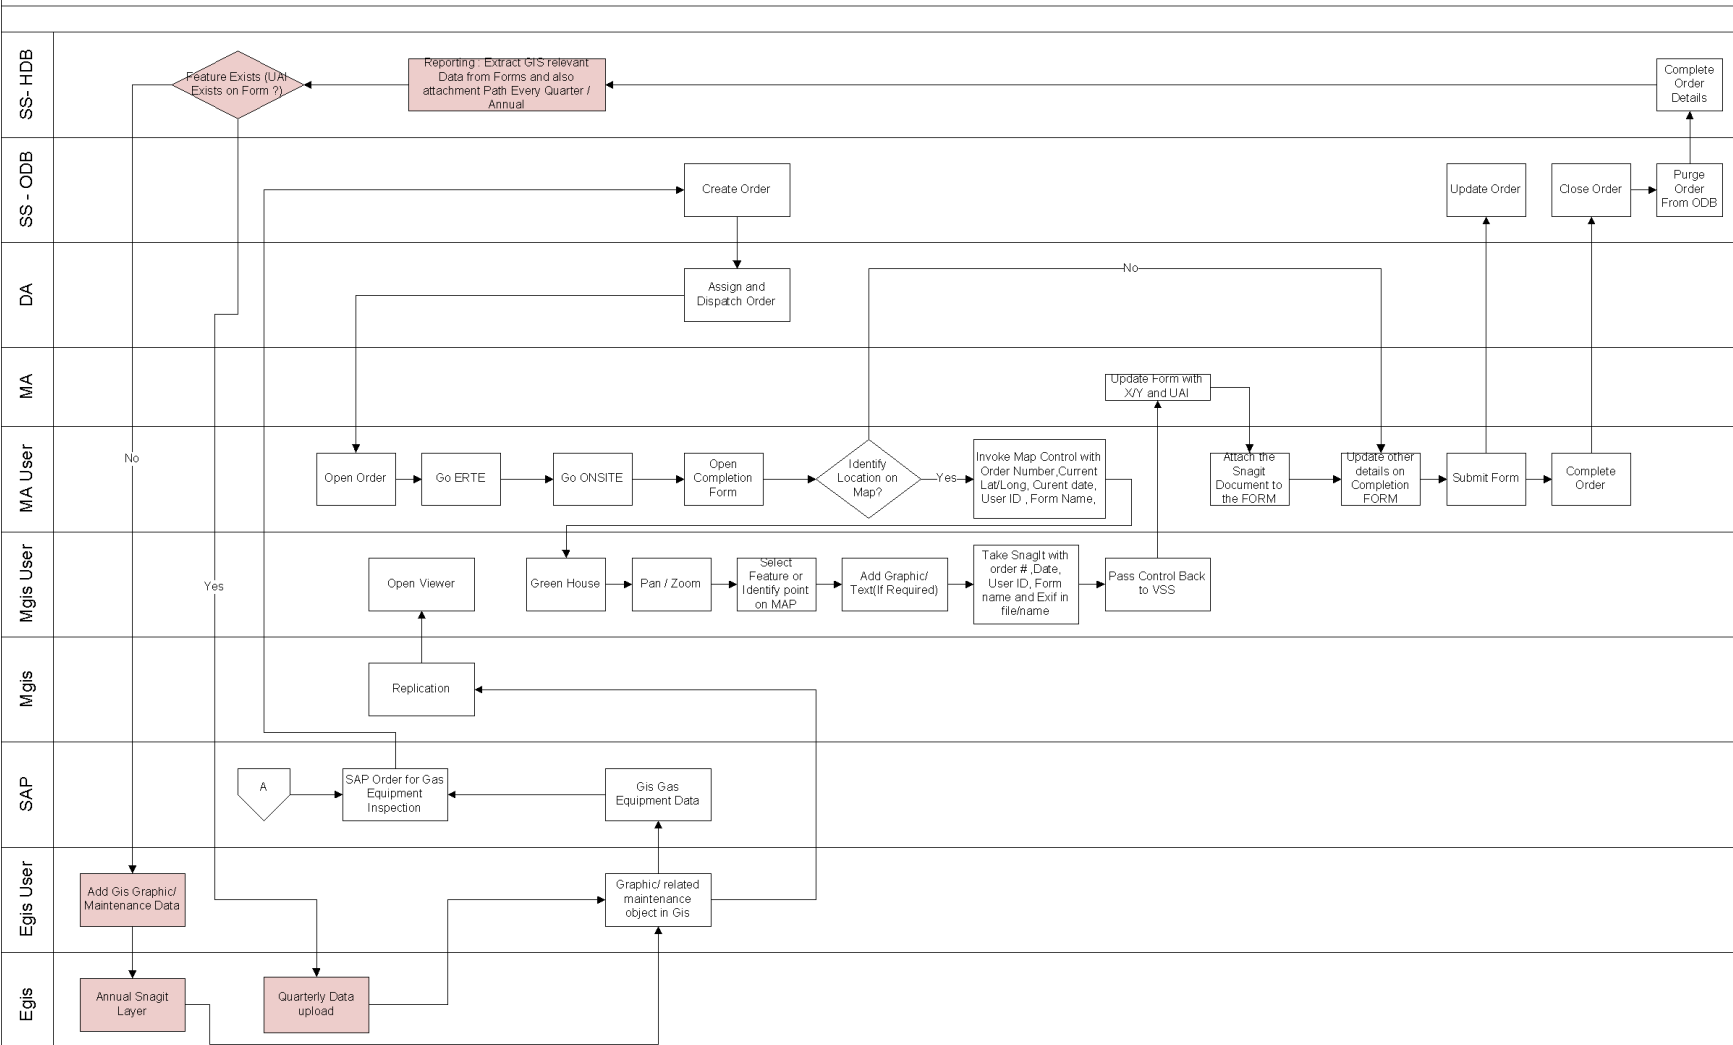

# SAP Order Workflow

---

- Modified Method
- Orders generated from SAP with UAI and asset info
- Sent to Service Suite and dispatched
- Field Tech will have pre-filled forms available
- Text and graphic markups in ArcFM Viewer and Snagit for missing GIS features
- Route to Service Suite Historical DB
- Send Snagit with Exif to GIS

# SAP Order Workflow

## MDS Upgrade Gas Maintenance Forms: Order Workflow

# Customizations

- Auto-Updaters
  - ⦿ Send To SAP when Gas Features are edited
- Leveraged previous customization to SAP PM interface to be configurable
  - ⦿ Freedom to make changes without a change request
- Required additional Ventyx to ArcFM Viewer integration (more than GetMap)

# Planned Integration

---

Service Suite  
Historical DB

GIS

# Conclusion

---

- Added new interfaces and modified workflows
- Provides for Gas Inspection Data in GIS to meet regulatory compliance
- Automate inspection schedules and derive performance metrics
- Questions, comments or suggestions?
