

# SIGMA

From rail design to multi-usable data, the road ahead in nowadays rail management

Robert Voute, CGI  
Sabine Geldermans, ProRail

# CGI is a global end-to-end IT and business process services leader

High-end business and IT consulting

69,000 professionals,  
85% shareholders\*

10,000 clients across the globe

System integration, IT and business process outsourcing

400 offices,  
40 countries around the world

Client satisfaction:  
9.1/10

100+ mission-critical IP-based solutions

\$10B annualized revenue

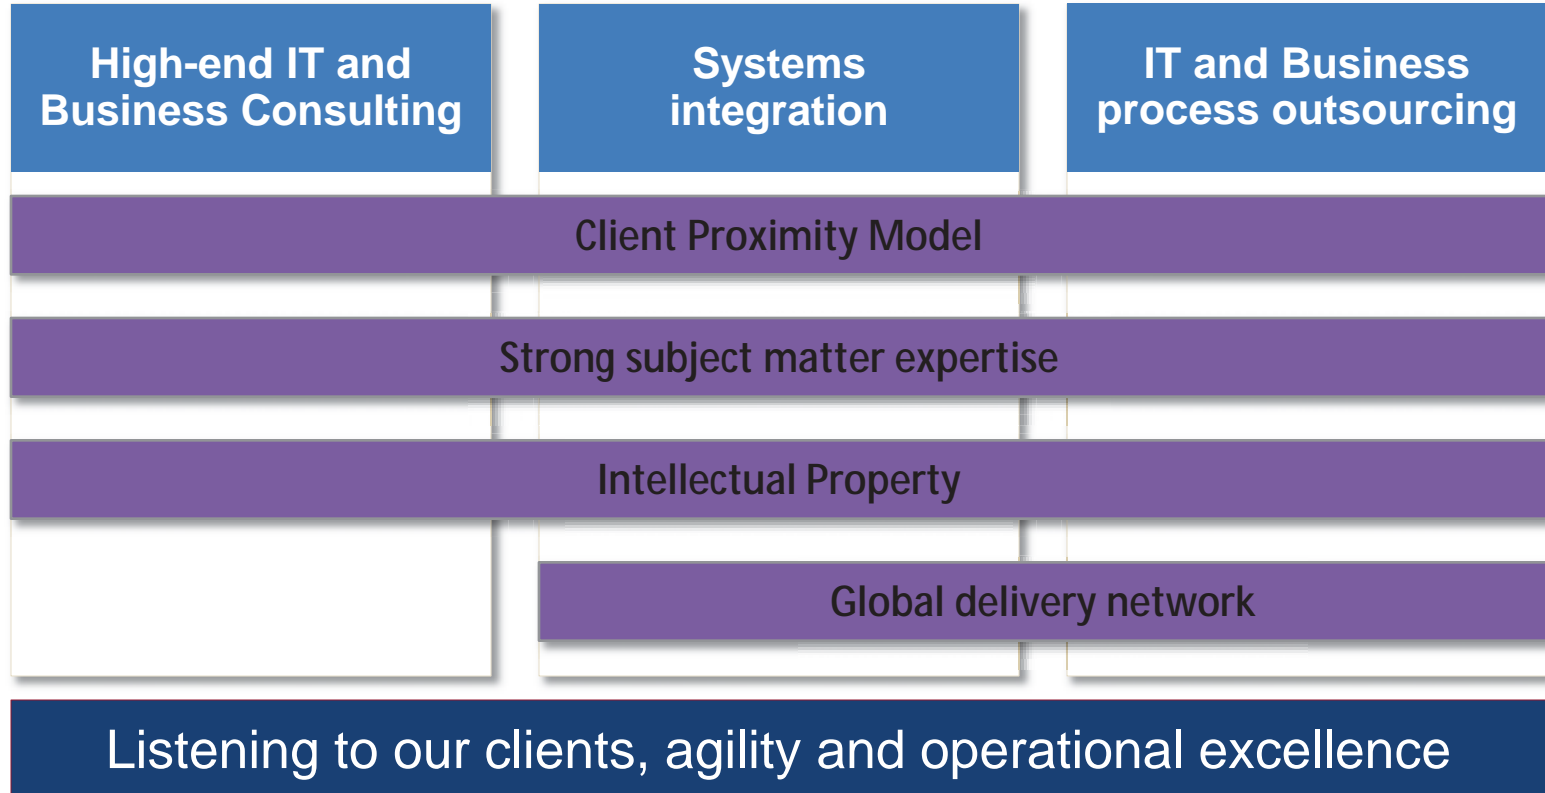

World's 5<sup>th</sup> largest independent IT and BPS firm

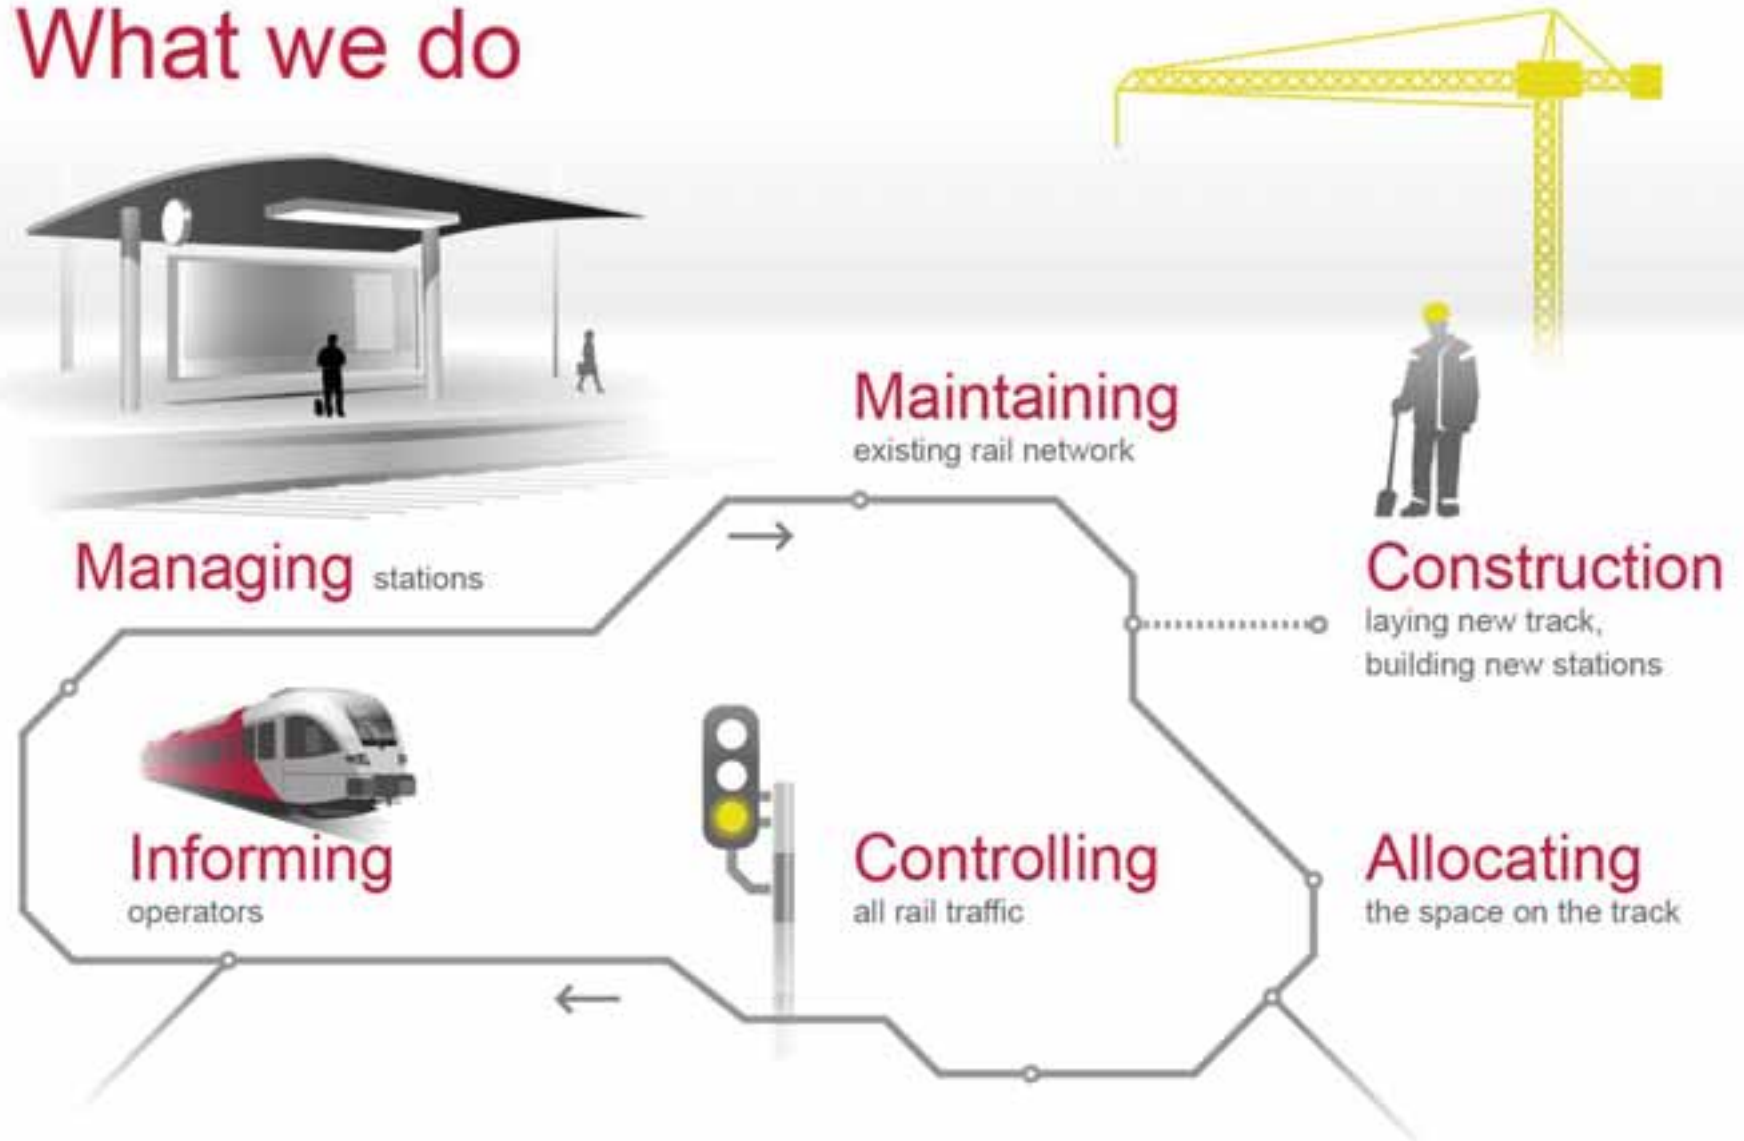

\* Before Logica

**CGI**

# Our range of services

## What we do

## 24/7

24 hours per day / 7 days a week / 365 days a year

**1,083,000**  
passengers per day

population **16,7 M**  
**4 M** local residents

safety  
reliability  
punctuality  
sustainability

**3,300,000**  
trains per year

**115,000**  
tonnes of freight per day

**9** passenger operators

**19** freight carriers

passenger transport per year: **139 M km.**

freight transport per year: **10 M km.**

# Infrastructure

# Asset Management

Rail track geometry

- XYZ and cant (3d model)
- very accurate: centimeters

Business processes

- Construction: design
- Maintenance: survey data

# Background

- Current system is end of life
- Survey data in bulk

New system: SIGMA  
Soll Ist Geometry Monitoring Absolute

# Alignment

Alignment = 3D geometry of track layouts  
(mathematically correct)

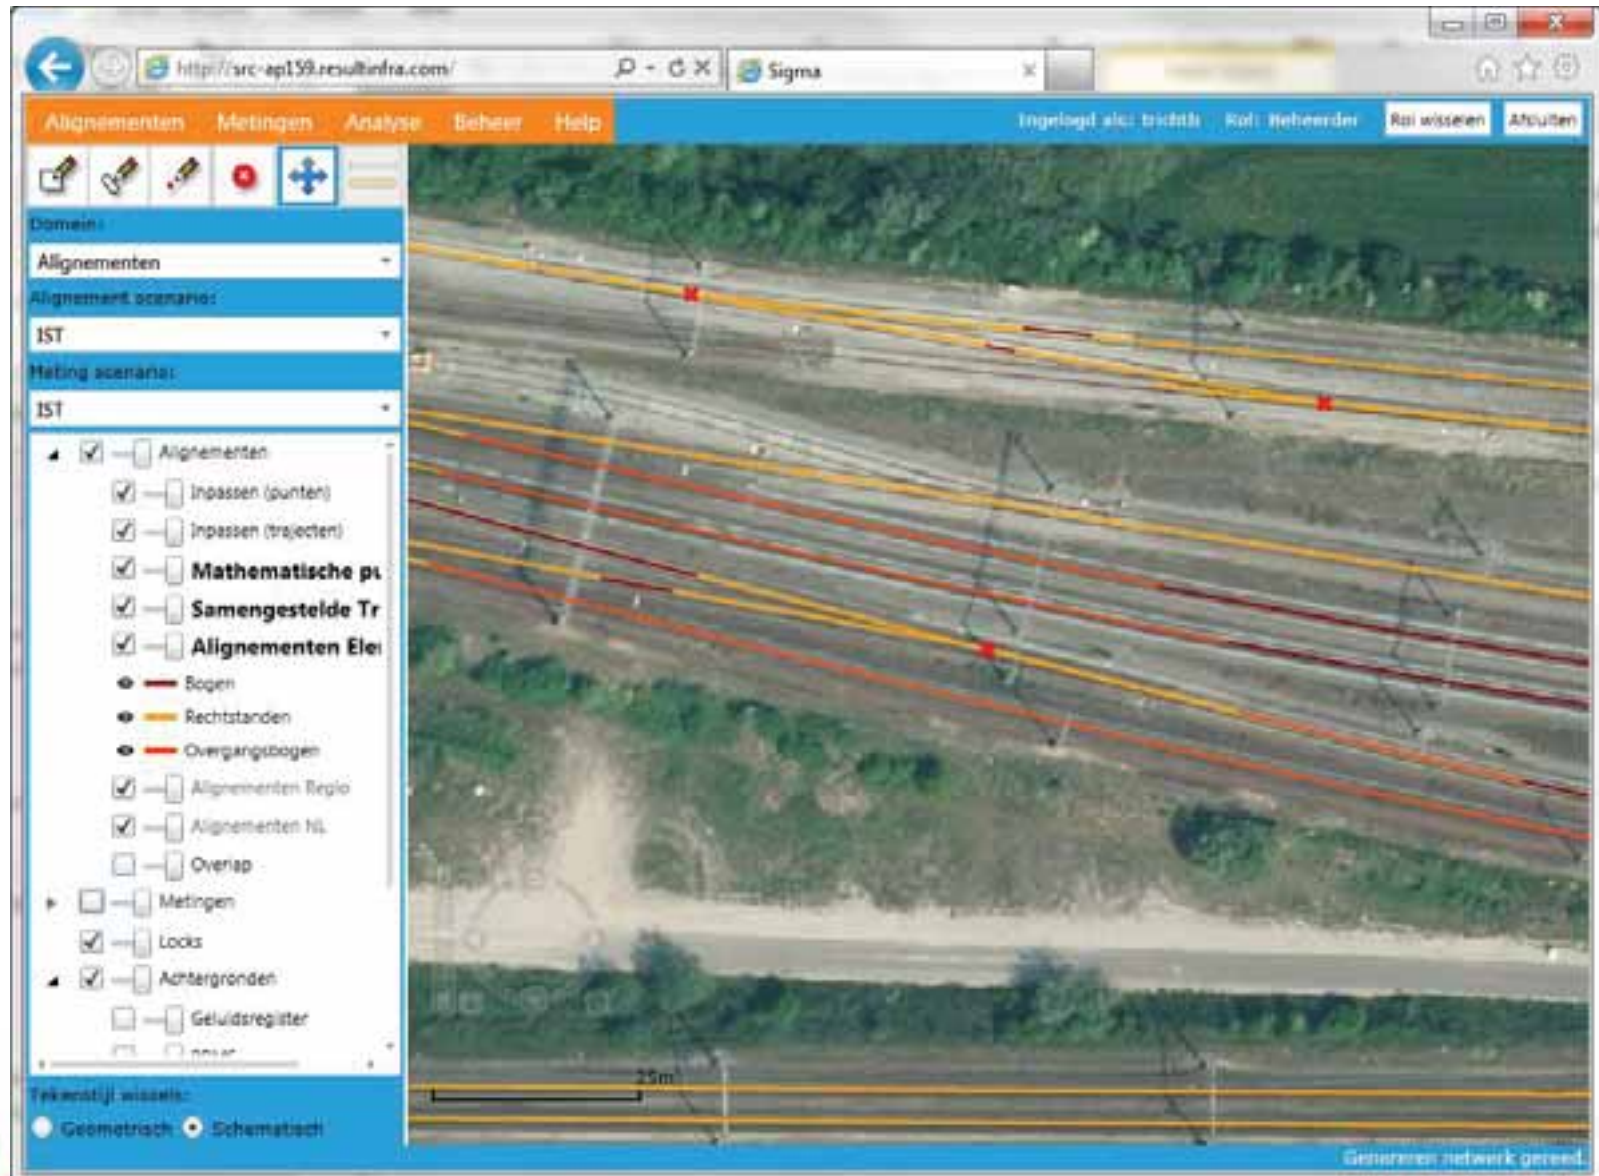

- Horizontal alignment defines physically where the route or track goes (the XY component).
- Vertical alignment defines the elevation, rise and fall (the Z component).
- Very accurate: 1.5 cm

# Alignment – horizontal component

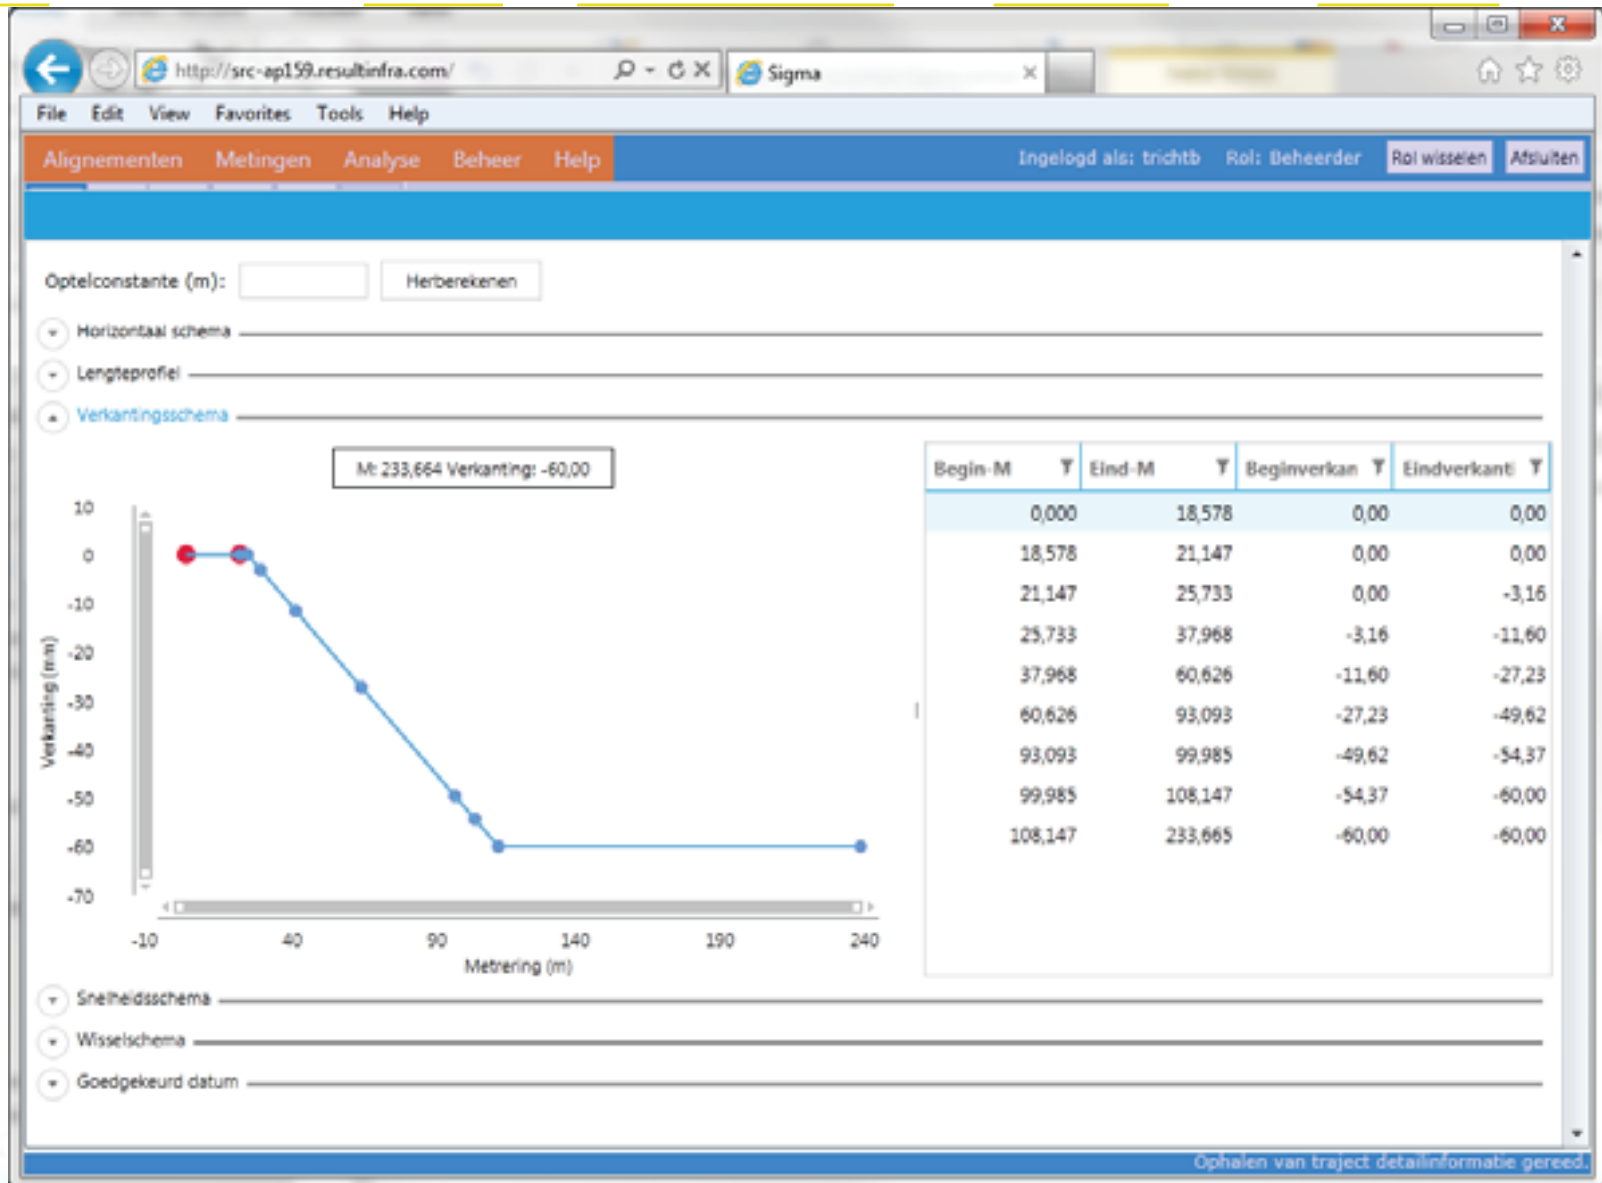

With transition curves

# Alignment – cant / superelevation

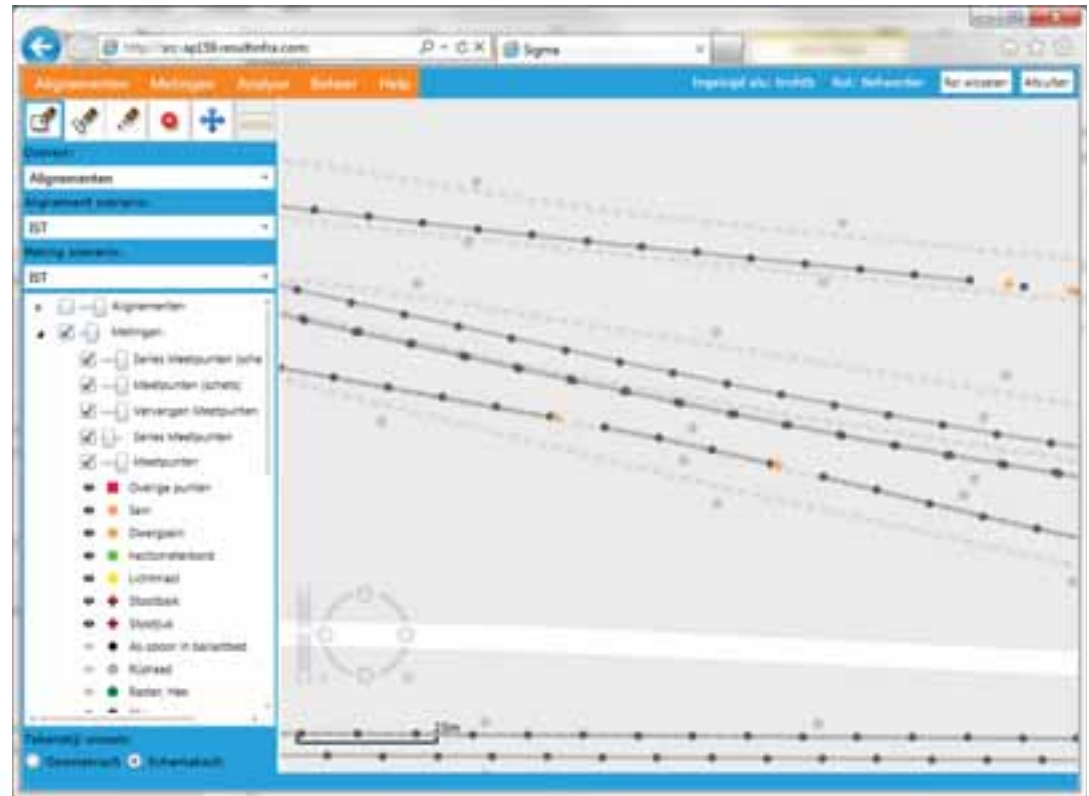

## Survey data

Measuring of track geometry

- XY of centerline rail
- Z of lowest rail
- cant

# Products / Analyses

## Asset Management

- CAD drawings
- Analysis alignment – measurement value

## Planned:

- Deviation of design rules
- Trend analysis

# Products / Analyses

“Schift” drawing

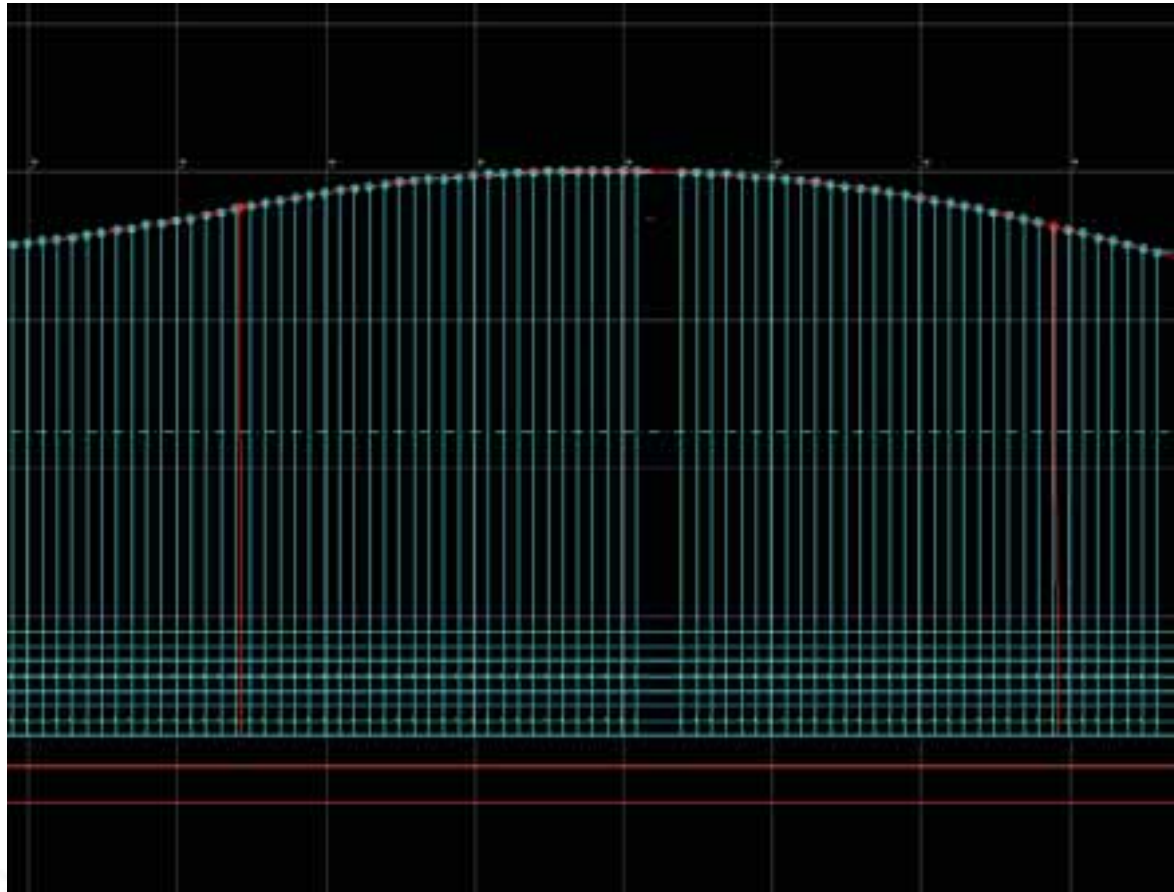

# Products / Analyses

“Licht” drawing

# Products / Analyses

# Products / Analyses

Internal ProRail customers

- GIS services (map and feature services)
- ERTMS
- Sound Check
- Incident management

## The road ahead

SIGMA delivers track geometry data to ProRail users and contractors: designs (alignments) and survey data (measurement values)

More use of GIS data and functionality in ProRail business processes

## From IT to business

### IT:

- Highly accurate (3D) data to authentic base data.
- Single source and multi use.

### Business:

- Fulfill INSPIRE in the future
- Improving the common operational picture (COP) of the rail network and its users

# Single source, multi use

Asset Management

SIGMA

# Single source, multi use

Asset Management

- Railmaps
- 3D calculations
- Asset management in general
- ERP connection
- **ALSO: extend with real time statuses**

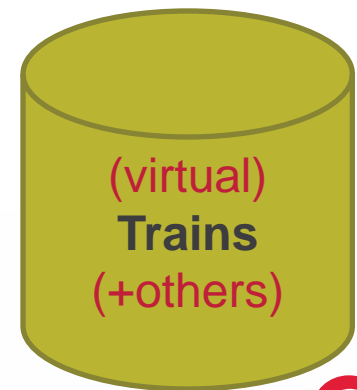

# Looking at real time...

Operations and control

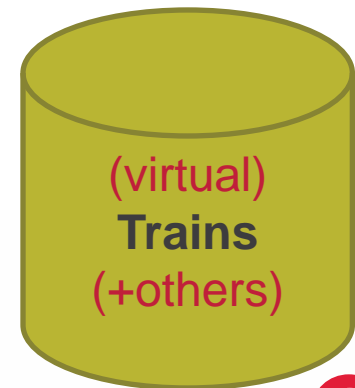

# Next step to take

Asset Management

Operations and control

# Real time information

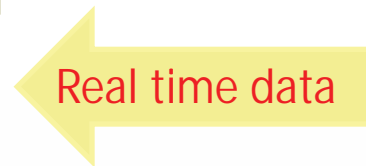

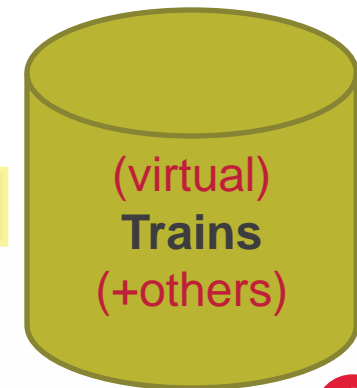

- Incident management
- Operations and control
- Predictive analysis
- Capacity analysis

Maintenance

Planning

## So what do we need?

### (Virtual) Assets:

- 3D Rail data (SIGMA)
- Track switches (incl. real time status)
- Signals (incl. real time status)
- Network topology
- Schematics

### (Virtual) Trains and Others:

- Real time locations
- Front and rear side
- ID
- Status (speed, content)
- Operator

### Real time data processing:

- Both assets and trains
- External data
  - Also public data; surprises a lot of people!

### Views:

- Geographical vs Schematic
- Scale

# Geographical

# Schematics

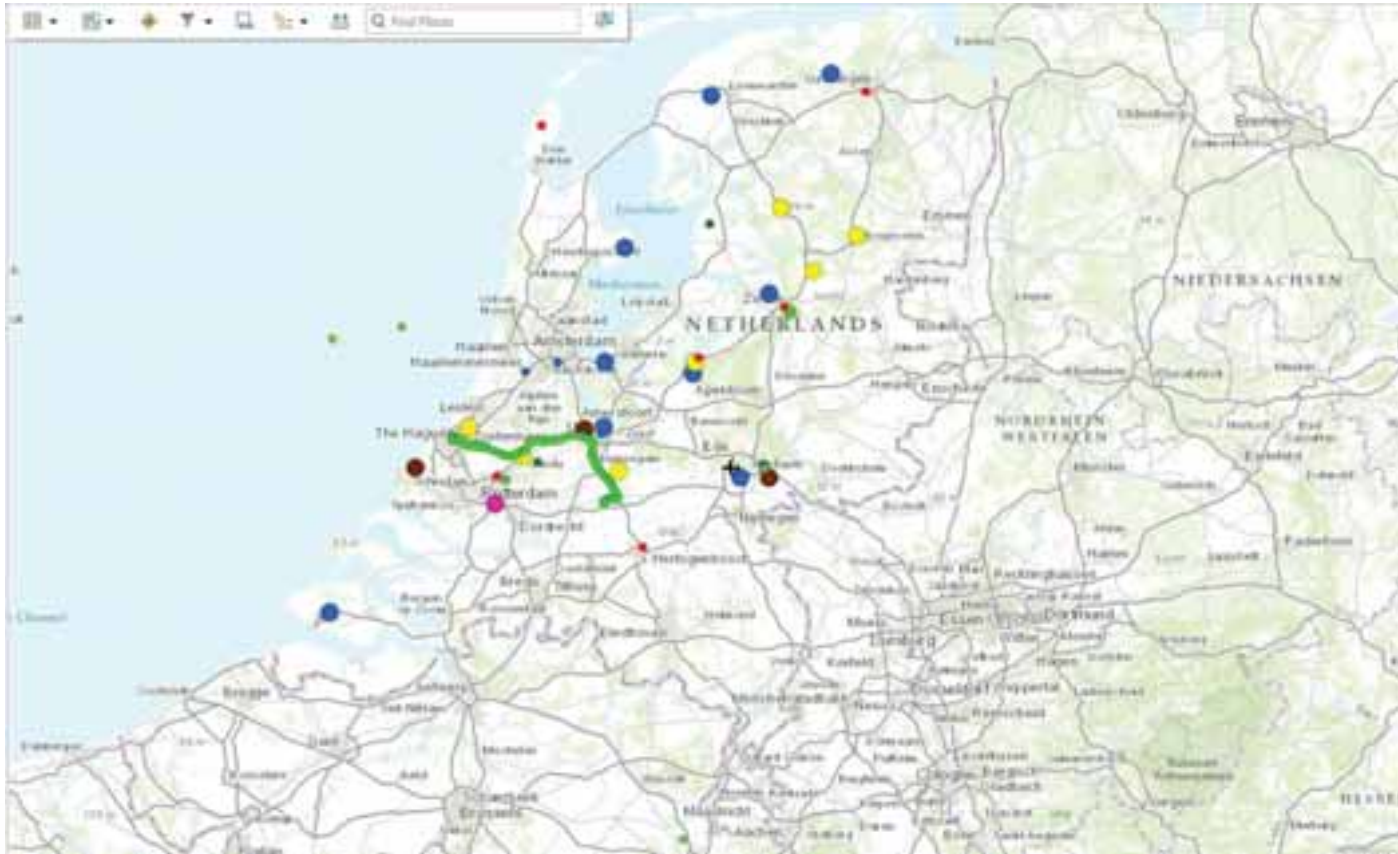

Large scale

Small scale

# Operational view

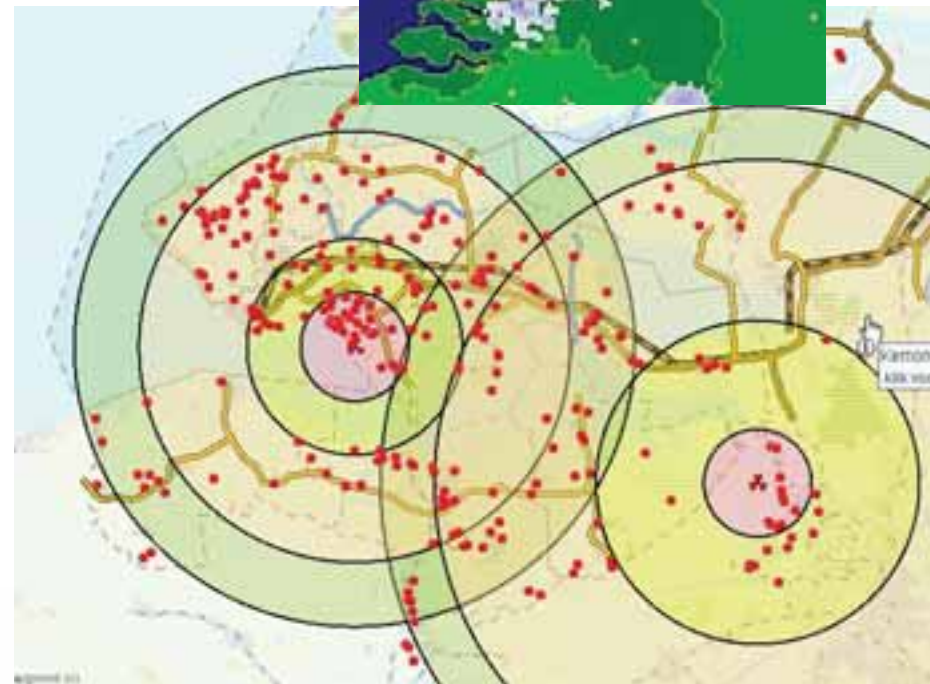

# Possibilities

## Combinations:

- Built up area's
- Meteo (rain and snow) and other public data
- Other crisis management systems (sensitive area's)

## Add on functionality:

- Warnings
- Exchange of information with and from field workers
- KPI's real time

# From operations view to app

Warnings and views

Updates

Mobile:

- using own location
- Operational view
- Data of assets close to you
- Adding data (i.e. inspection report or status)

## What are we doing right now

- PoC's for:
  - Crisis teams
  - Real time location of trains
  - Dashboards for operations (COP)
- MEAP platforms for mobile
- Going from Silverlight to HTML5
- Changing SIGMA into authentic base registry

# What is surprising?
