and Africa User Conference**

October 23-25 | Munich, Germany

GeoEvent Processor und Feeds

Dr. Peter Saiger-Bonnas

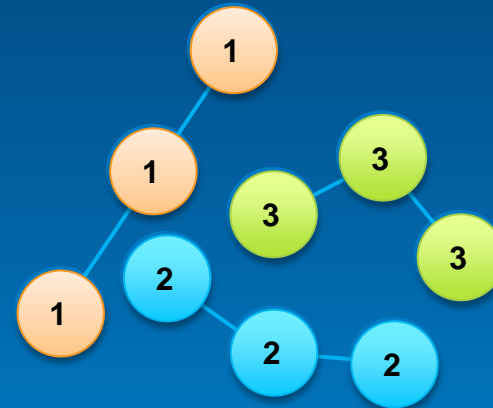

Raum-Zeitliche Daten

Gruppierung nach Zeit

Darstellung geographischer Daten zu einem bestimmten Zeitpunkt.

Gruppierung nach Attributen

Darstellung von Tracks

Raum-Zeitliche Daten

Dynamisch

Räumliche Bewegung

- Flugzeuge
- UAV
- Fahrzeuge
- Tiere
- Wirbelstürme

Diskret

Irgend etwas passiert
irgendwo

- Kriminalität
- Blitzeinschläge
- Unfälle

Stationär

Räumlich nicht
veränderbar

- Wetter Stationen
- Verkehrs Sensorik
- Luft Qualität
- Windräder
- Smart Meter
- Pegelstände

Veränderlich

Wachstumsänderung

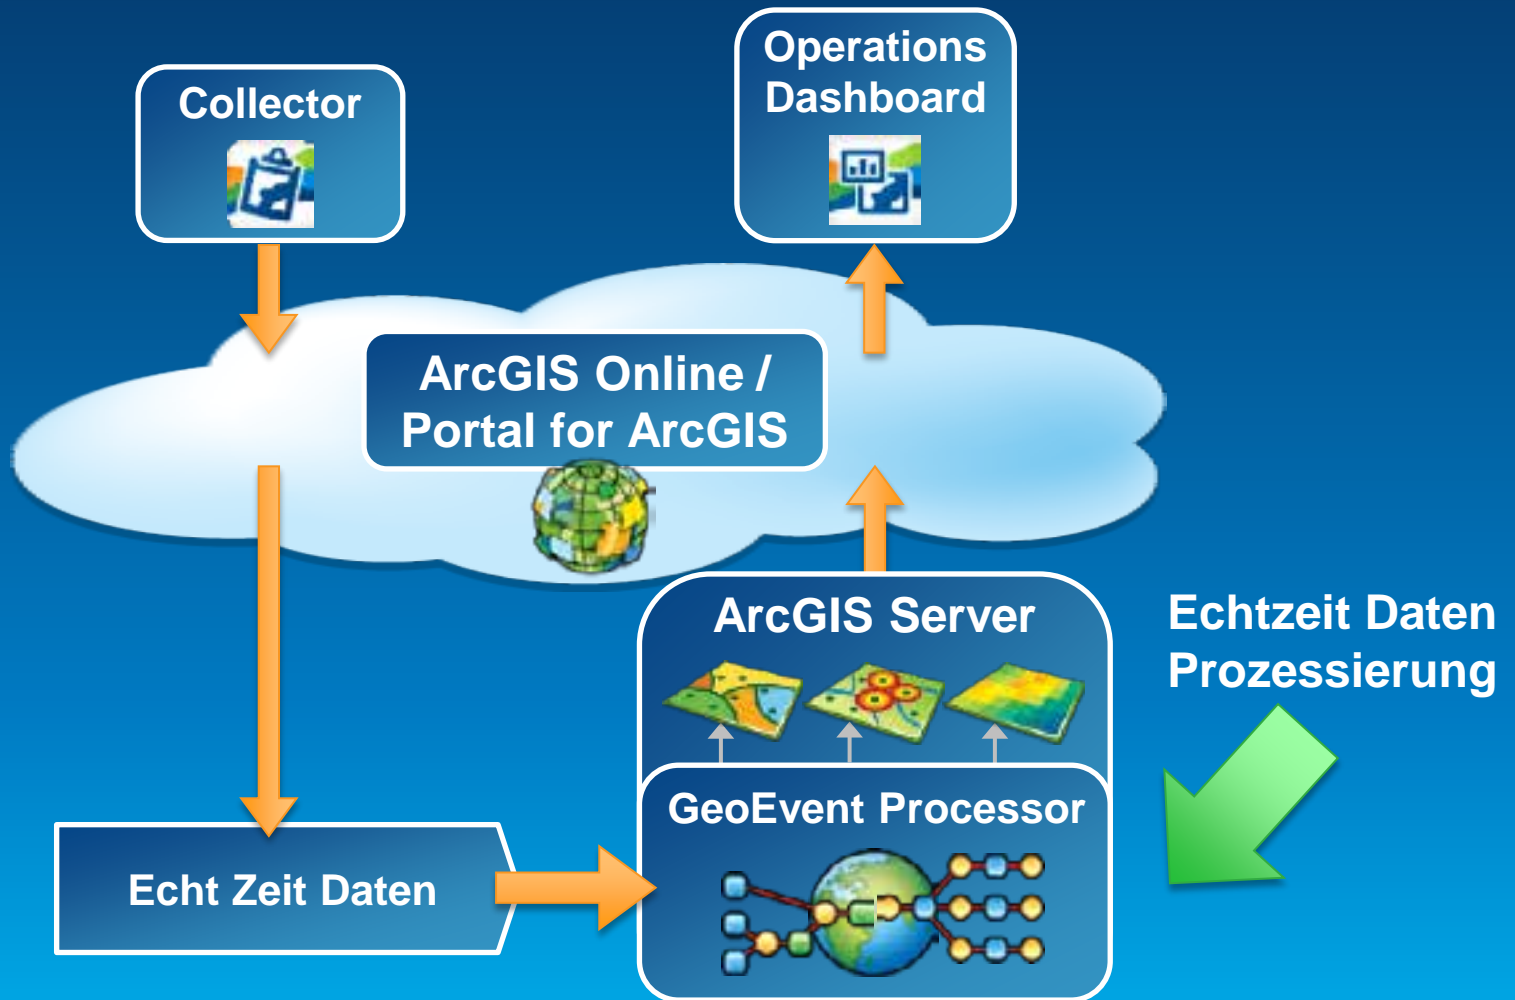

- Bevölkerung
- Agrarflächen
- Verteilung
- Nutzflächen
- Wahlergebnisse

ArcGIS unterstützt Echtzeit GIS

ArcGIS unterstützt Echtzeit GIS

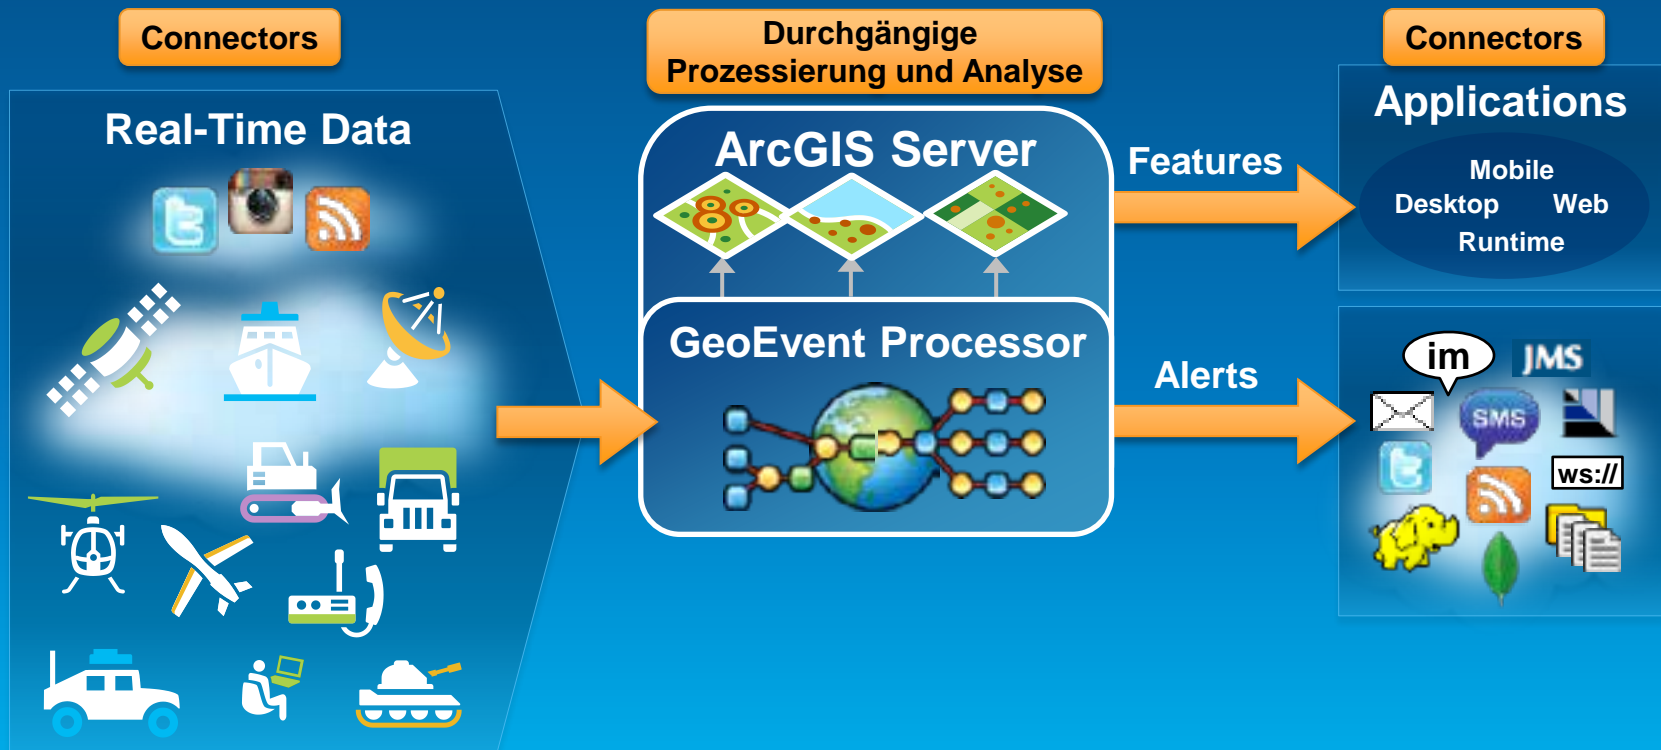

Funktionsweise

GeoEvent Processor

- Empfangen und Senden von Daten
- Durchgängige Datenprozessierung, Überwachung und Analyse
- Versenden von Nachrichten an berechtigte Nutzer und Gruppen

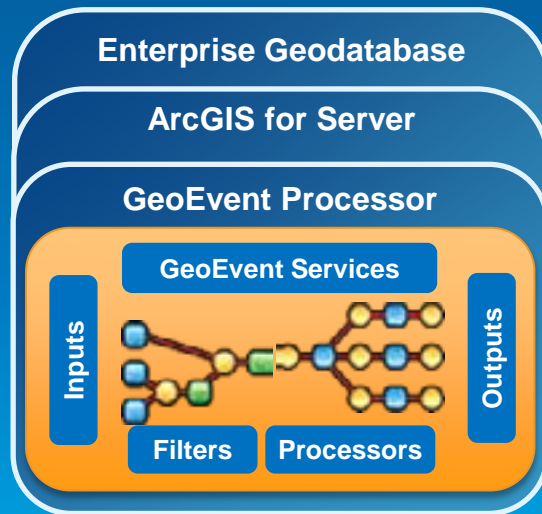

GeoEvent Processor – Systemdesign

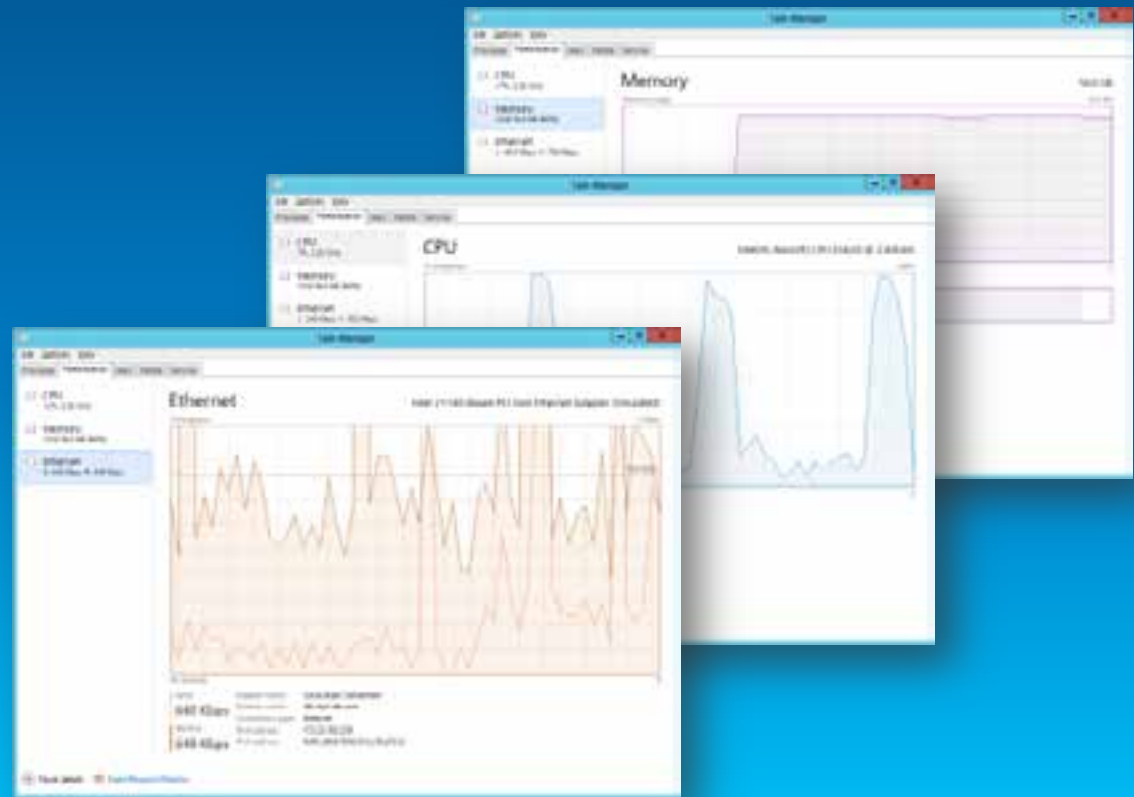

- **Inputs** und **Outputs** bestehen aus Connectors

- Input empfängt Echt-Zeit Datenströme von beliebigen Sensoren
- Output sendet bearbeitete Datenströme zu Clients über definierte Protokolle

- **Voraussetzung**

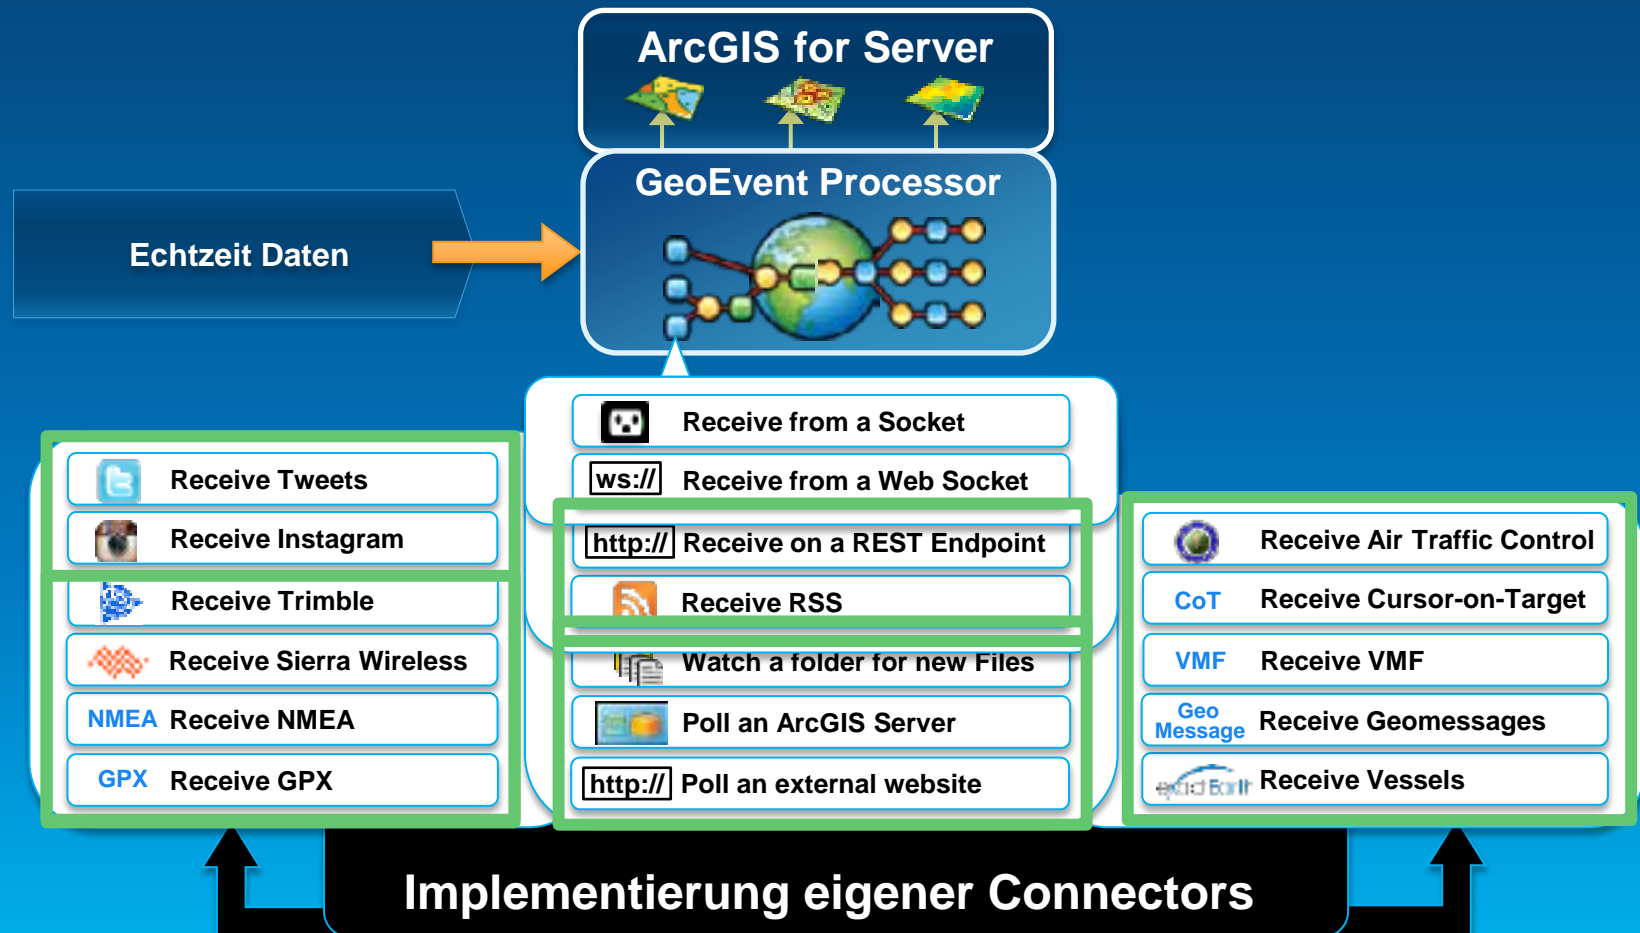

- **Systemdesign!!**

Empfang von Echtzeitdaten

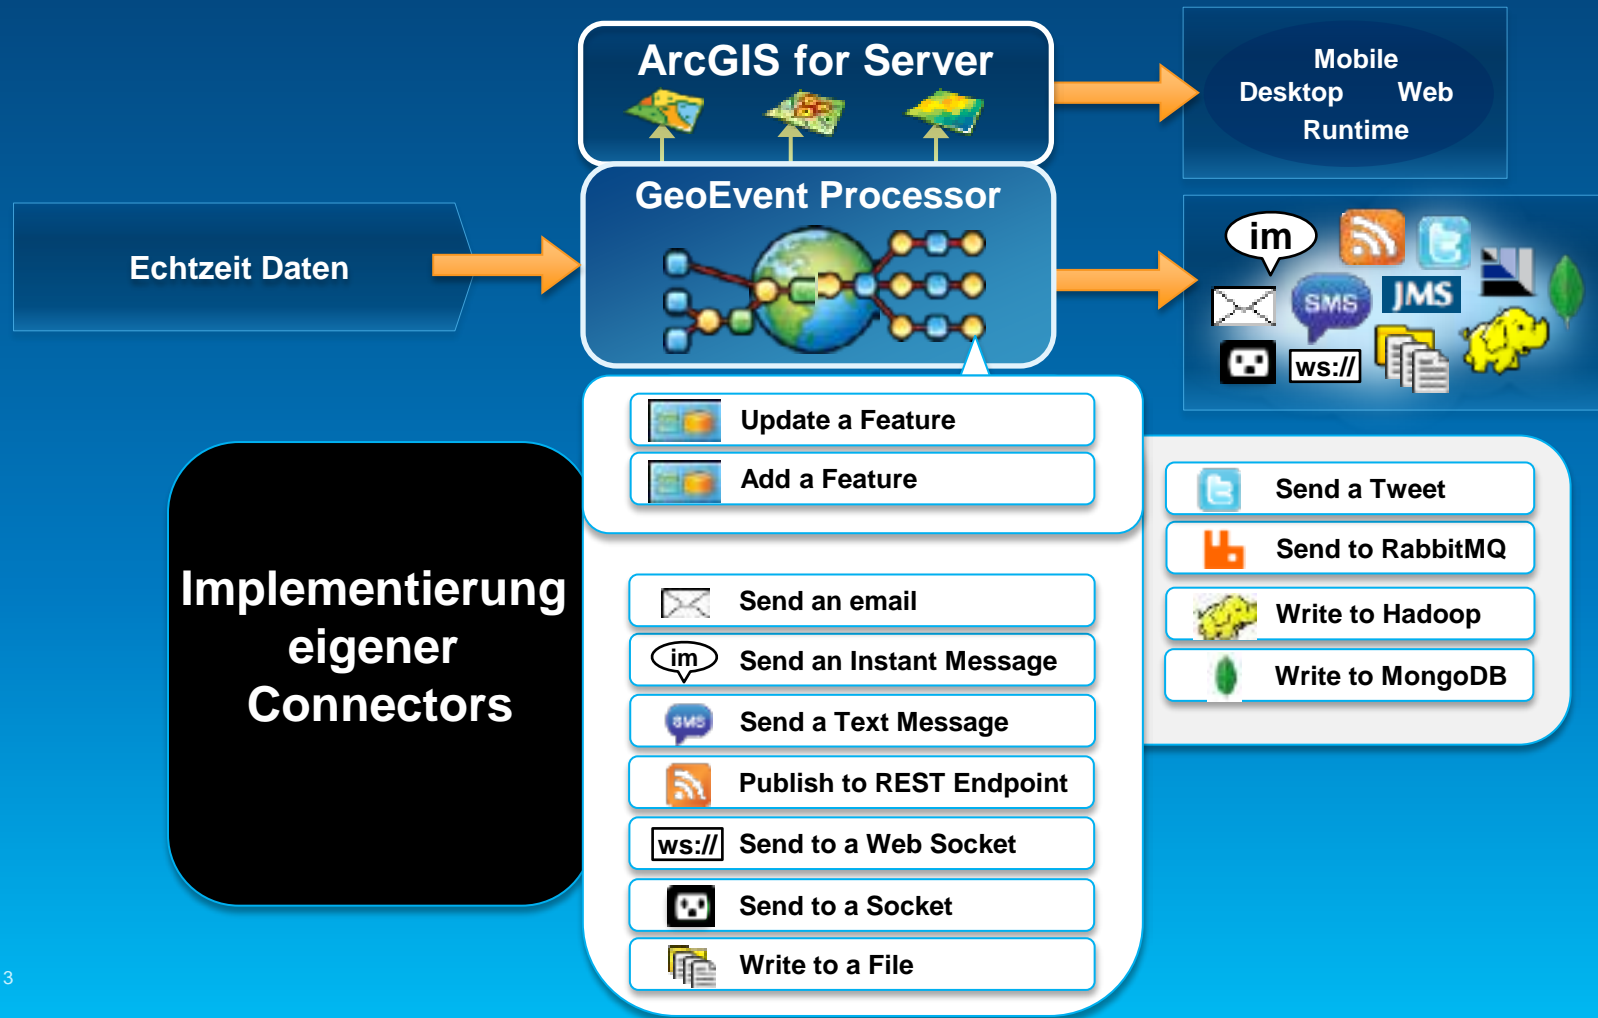

Input Connector

- GeoEvent Processor verbindet sich über (Standard) Connectors mit Sensoren

Senden von Echtzeit Daten

Output Connector

Connectors

Default – Input

Poll an ArcGIS Server for Features

Poll an external website for JSON

Receive Features on a REST endpoint

Receive JSON on a REST endpoint

Receive JSON on a Web Socket

Receive text from a TCP Socket

Receive text from a UDP Socket

Subscribe to an external Web Socket for JSON

Watch a folder for new .csv files

Watch a folder for new .json files

Receive RSS

Default – Output

Add a Feature

Update a Feature

Publish GeoEvents on a REST endpoint

Publish json to a UDP Socket

Publish JSON to a Web Socket

Publish text to a TCP Socket

Publish text to a UDP Socket

Push JSON to an external Web Socket

Push JSON to an external website

Send a text message

Send an email

Send an instant message

Write to a .csv file

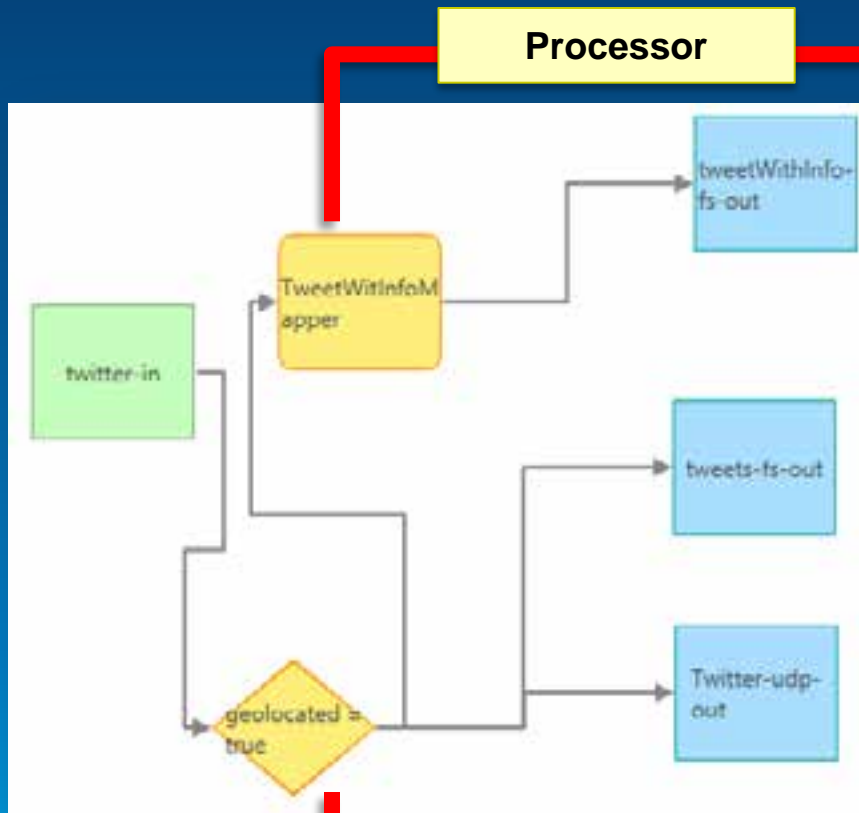

Write to a .json file

Stream Layer
 View the sample
 Download as a zip file
 Explore in the sandbox

Description
 Receive and display a stream of data using the StreamLayer class. The StreamLayer relies on WebSockets and is only supported in browsers that have WebSockets. The service used in this sample is for demonstration purposes only and needs an ArcGIS GeoEvent Processor for Server. To publish your own streams of data, please refer to the GeoEvent Processor documentation.

Code

```
