

The improvement of production of the GDR50LT in Lithuania

**Kęstutis PAPŠYS, Lina PAPŠIENĖ, Julius D. BUDREVIČIUS, Marius MARMA,
Evaldas ROŽANSKAS, Mindaugas PAŽEMYS / GIS-Centras
Jurgita ŠPŪRAITĖ / National Land Service**

The company - The National Center of Remote Sensing and Geoinformatics „GIS-Centras“ (SE „GIS-Centras“)

- Since 1992
- Supervised by the National Land Service
- Headquarters in Vilnius, branch in Kaunas
- Leader in distribution of geographic data and maps
- Official manager of State Information Systems:
 - Portal of the National Spatial Data Infrastructure (www.geoportal.lt)
 - (Geo)reference data cadaster (GRPK)
 - (Geo)reference spatial data set at the scale 1:10.000 (GDR10LT)
 - National GNSS permanent network (LitPOS)

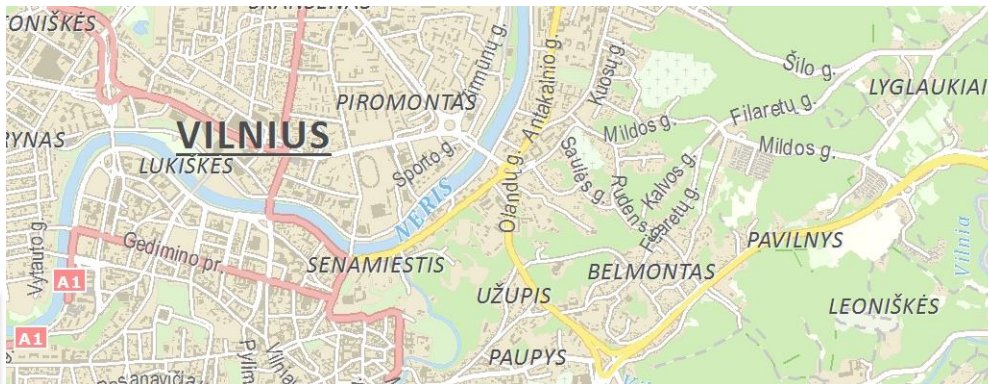

Reference data

(Geo)reference spatial data represent:

- natural (the land cover, water bodies, etc.) and
- anthropogenic (buildings, roads, etc.) objects of the landscape.

Scales: 1:10 000, 1:50 000, 1:250 000

from 2013-07-01

Traditional updates of GDR10LT and GDR50LT

The beginning (2013)

 Project:	The research of the possibilities for automated or semi automated update of GDR50LT
 Contractor:	National Land Service
 Implementer:	GIS-Centras
 Duration:	5 months
 Main task:	to analyse the possibilities of the automated or semi automated update of GDR50LT by using the spatial data of GDR10LT in territory of Lithuania

PRECONDITIONS

Have to be use:

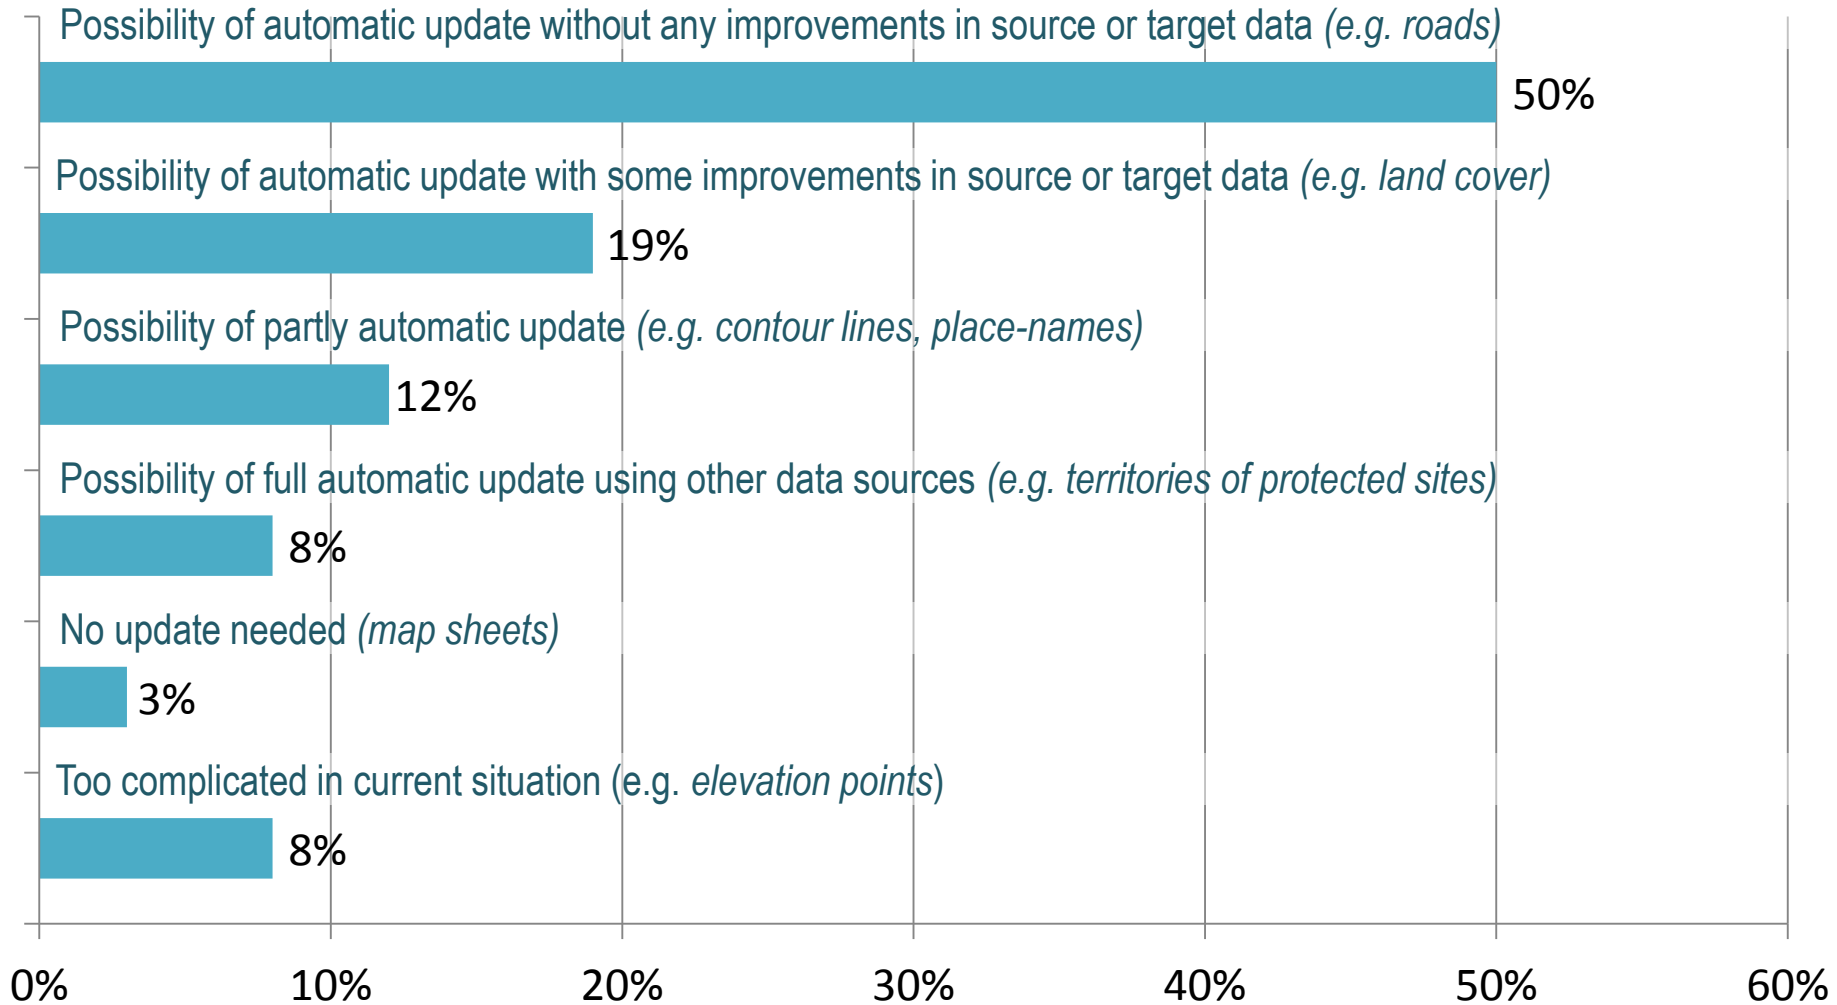

- ✓ Current specifications of GDR10LT and GDR50LT
- ✓ Current spatial data of GDR10LT
- ✓ ArcGIS software 

Tasks of the Project

The results

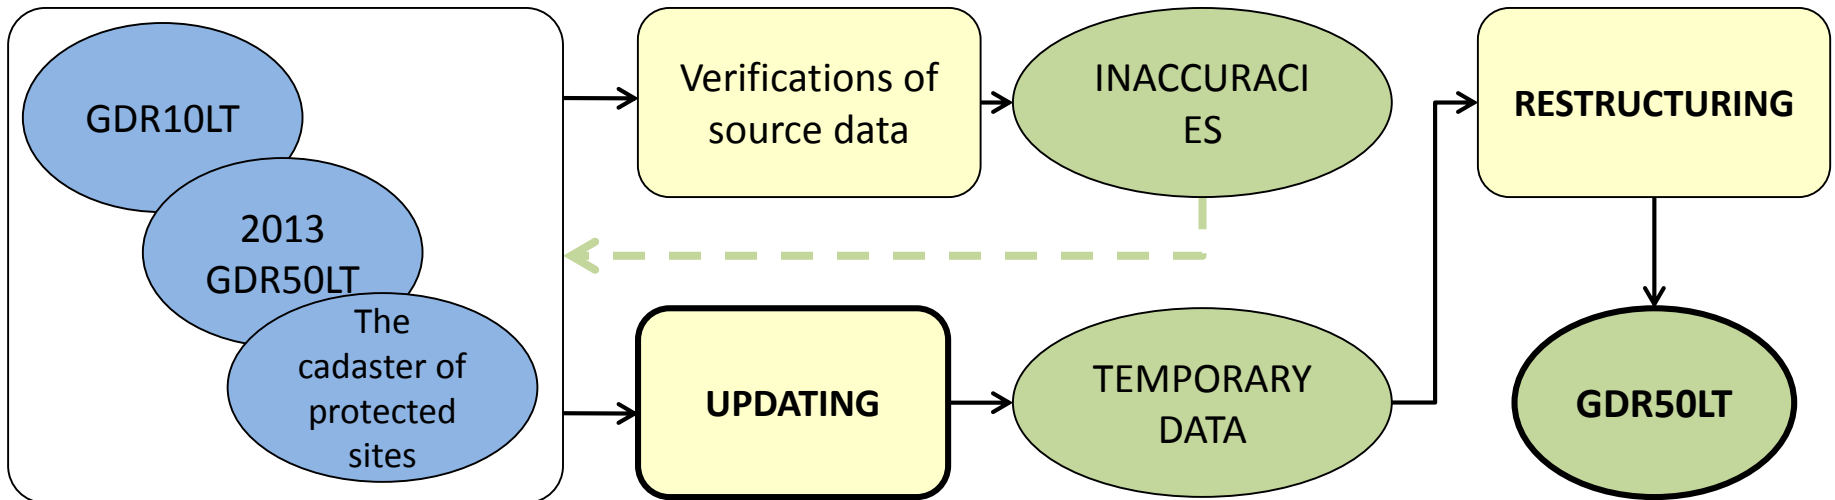

Possibilities of automatic updates in territory of Lithuania

Follow up (2014)

 Project:	The automatisisation of updating GDR50LT
 Contractor:	National Land Service
 Implementer:	GIS-Centras
 Duration:	5 months
 Main task:	To develop models for automatic updating GDR50LT

Generalization in the Project

GDR50LT sluoksniu GEODEZ atnaujinimas

Title GDR50LT sluoksniu GEODEZ atnaujinimas

Summary
Modelis skirtas GDR50LT sluoksniu GEODEZ atnaujinimui naudojant GDR10LT sluoksniu GEODEZ duomenis. Naudojant šį modelį yra sukuriami atnaujinti sluoksniu GEODEZ erdviniai objektai, kurie turi būti išsaugomi tarpiniuose atnaujinto GDR50LT duomenų bazėje. Šis sluoksnis vėliau turi būti pertvarkytas(restruktūrizuotas) naudojant modelį "GDR50LT sluoksniu GEODEZ restruktūrizavimas".

Usage
Modelis turi būti naudojamas atnaujinant GDR50LT erdvinius duomenis.

Syntax
GDR50LTGEODEZATNAUJINIMAS (GDR10LT_sluksnis_GEODEZ, GDR10LT_sluksnis_KELIAI, GKPIIS_sluksnis_GKPIIS_Lietuva_GPS, GKPIIS_sluksnis_GKPIIS_auksčiai, GKPIIS_sluksnis_GKPIIS_vietiniai_punktai, Darbinės_duomenų_bazės_saugojimo_vieta, Tarpinių_rezultatų_duomenų_bazė)

Parameter	Explanation
GDR10LT_sluksnis_GEODEZ	Dialog Reference Pasirinkite GDR10LT sluoksnį GEODEZ iš duomenų bazės _1_pradiniai_duomenys_GDR50LT_atnaujinimui(..._1_pradiniai_duomeni_GDR10LT(GEODEZ)). Pasirenkamas gali būti tik taškiniųobjektų sluoksnis, saugomas kaip ob; Class). Sluoksnis turi būti LKS-94 koordinatų sistemoje.

Advantages of ArcGIS Model Builder

Generalisation tools:

Aggregate points
Aggregate Polygons
Collapse Dual Lines
Collapse Road Detail
Merge Divided Roads
Thin Road Network
Delineate Built-up Areas
Simplify Buildings
Simplify Lines
Simplify Polygons
Smooth Lines
Eliminate Polygon part
Eliminate...

Other tools:

Select
Buffer
Clip
Erase
Spatial Join
Feature to ...
Extend
Topology
Generate Near Table
Spatial Joint
Select by Location
Calculate Field
Append...

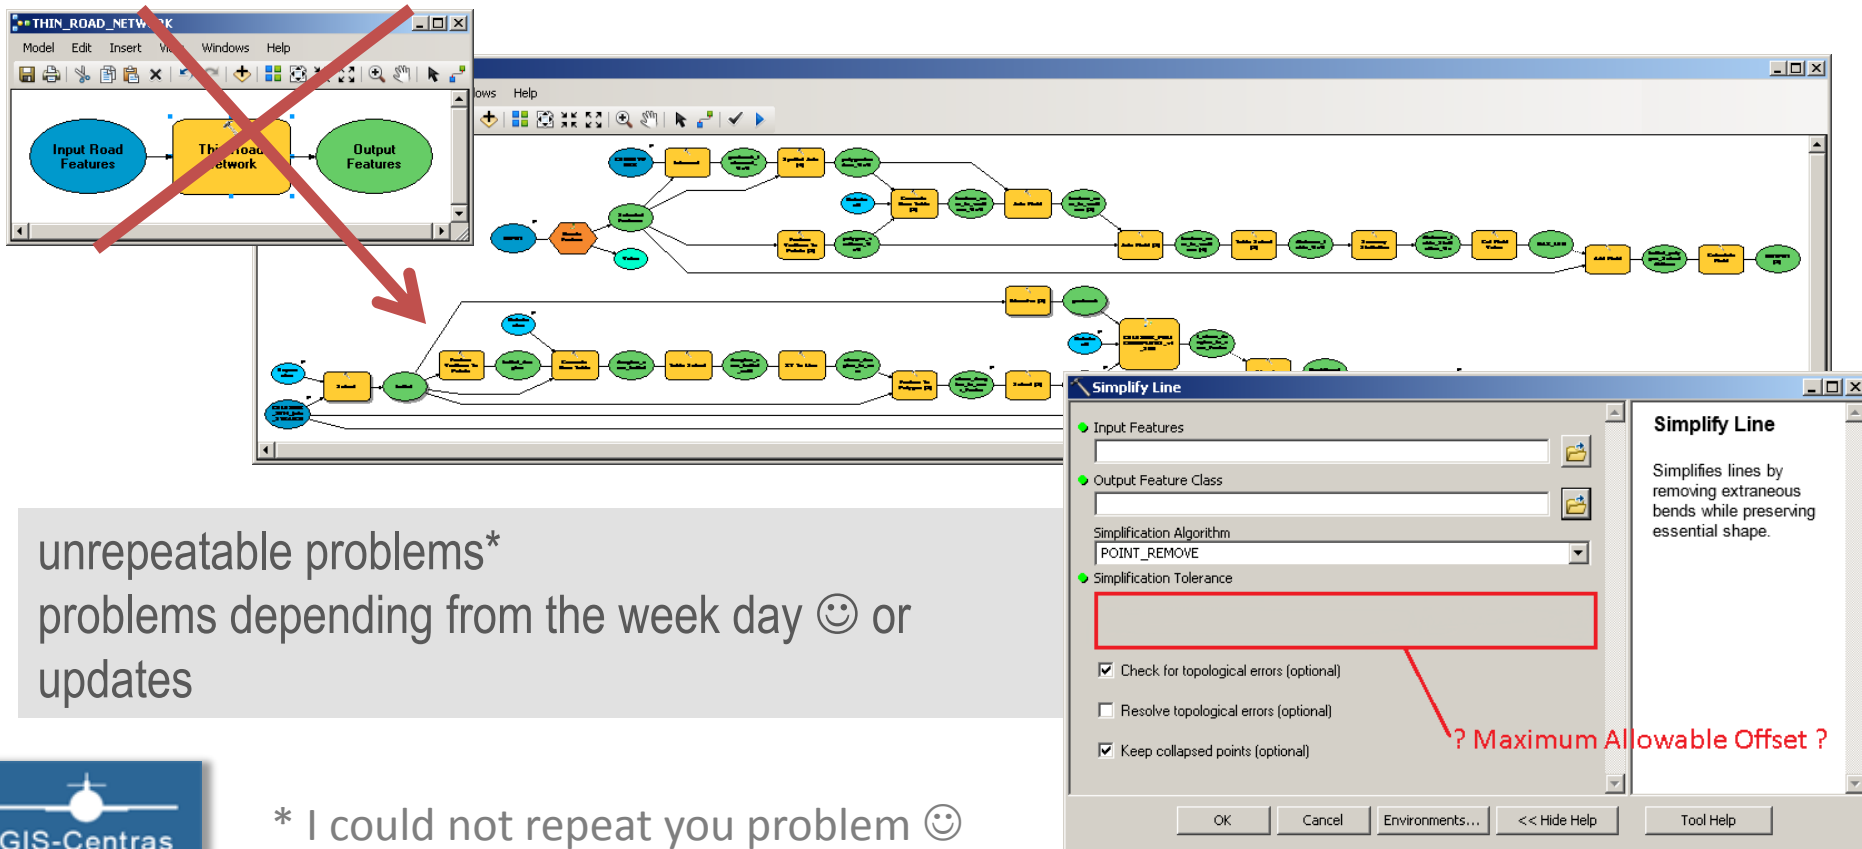

Surprises of ArcGIS Model Builder

Standard generalisation tools do not fulfil our expectation (sometimes):

- Aggregate sometimes don't get good results
- Thin hydro features – source data: perfect network; required Production Mapping
 - Thin road network sometimes don't remove dangles

GIS-Centras prepared several his own algorithm using other ArcGIS geoprocessing tools.

unrepeatable problems*
problems depending from the week day ☺ or updates

* I could not repeat you problem ☺

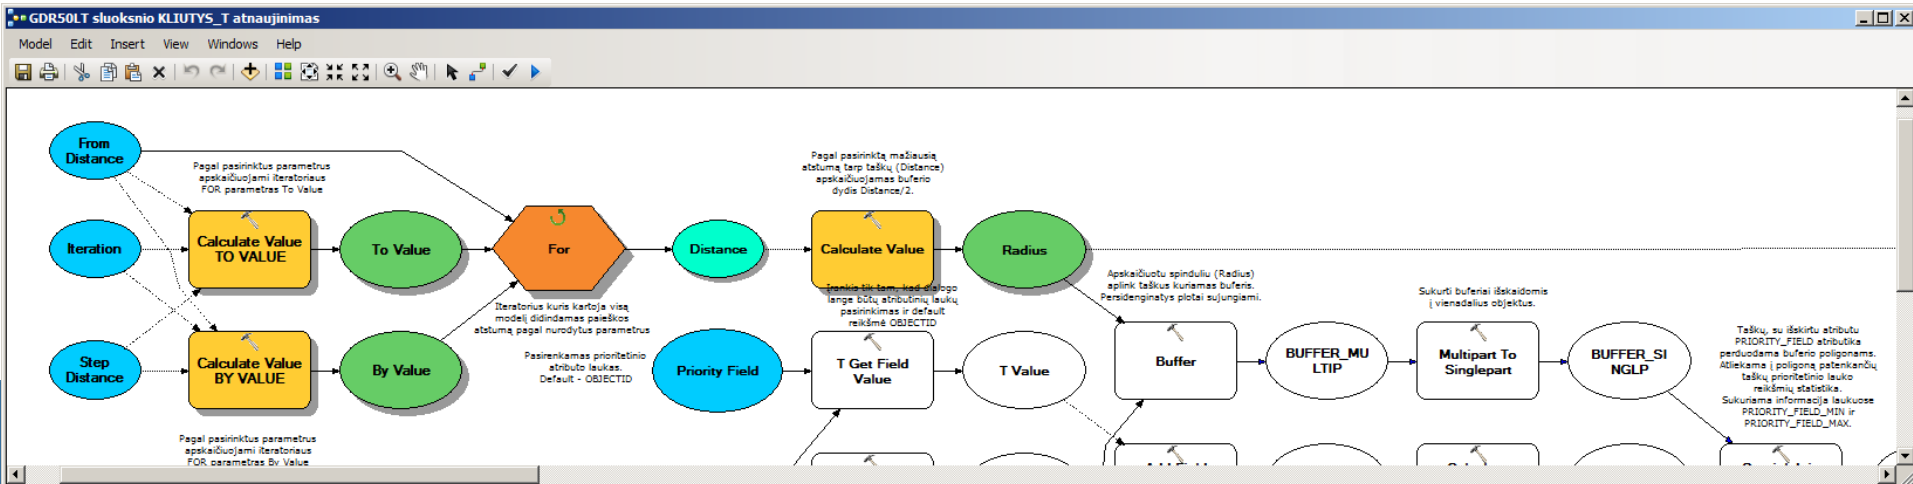

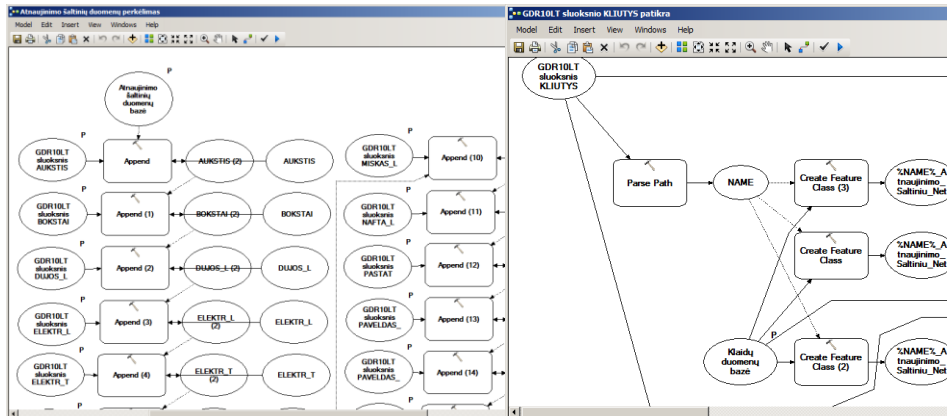

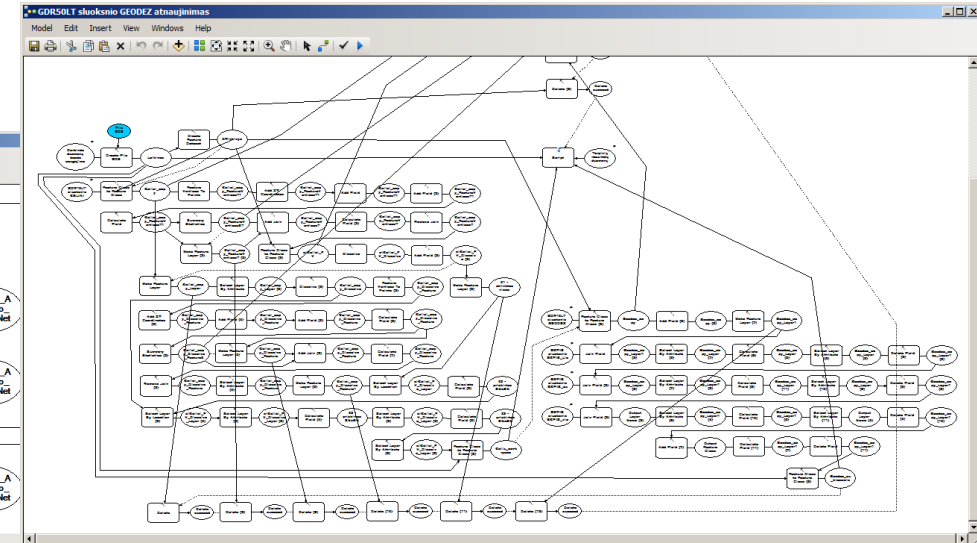

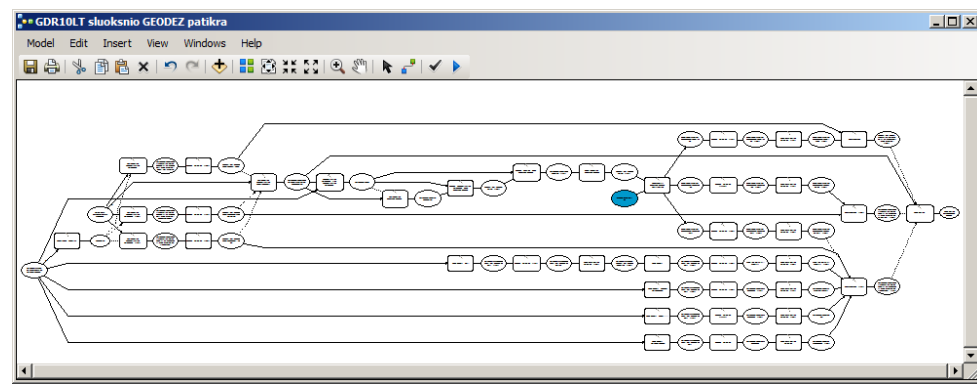

Simplify Line
Simplifies lines by removing extraneous bends while preserving essential shape.

Input Features
Output Feature Class
Simplification Algorithm: POINT_REMOVE
Simplification Tolerance: [Red Box] ? Maximum Allowable Offset?
 Check for topological errors (optional)
 Resolve topological errors (optional)
 Keep collapsed points (optional)

Some statistics

- Five main models
- Each of them have to include models for each Feature Class of GDR50LT
- Each of them might include n submodels
- And we use A LOT OF tools.

We would like...

- To work less 😊
- More flexible Geoprocessing tools
- More friendly ModelBuilder user-interface
- Better compatibility with hardware and software
- Understanding difference between point and comma
