# Love All, Serve All

Building larger eGovernment Geoportals with focussed Apps

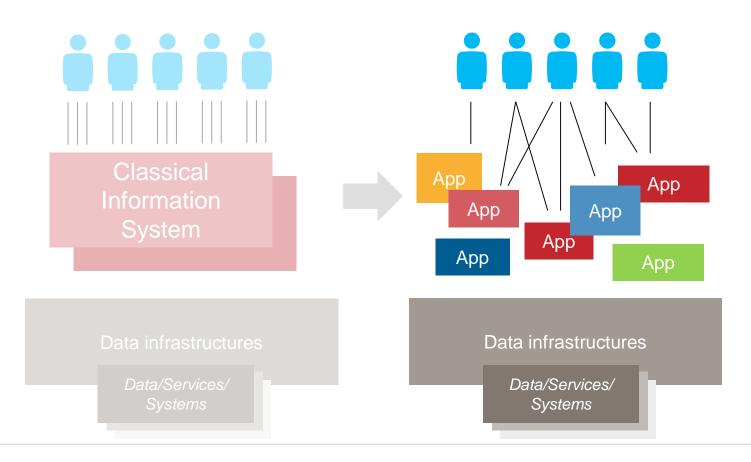

#### con<sup>•</sup>terra

## **The Challenge**

- eGovernment services need to bring value to the society
  - > Provide easy and sustainable access to information
  - > Povide a value, a solution for a problem/task/etc
  - > Based on existing data infrastructures (data, services, systems, etc)
- Consumerization and apps provide a (not so) new paradigm to bring value to the society
  - > Apps, that are focussed, single-purpose, easy to use, appealing and intuitive
- Serve a lot of potential user groups all with their own purposes and specialties
  - > Citizens, government, institutions, public/private organizations

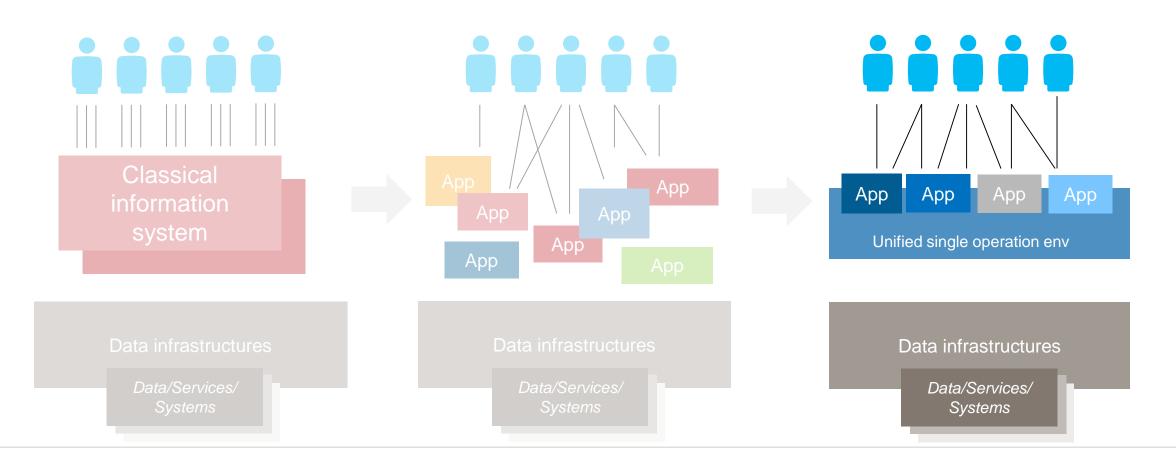

### **The Challenge**

many purposes with different facets lead to potentially many apps

### The Approach

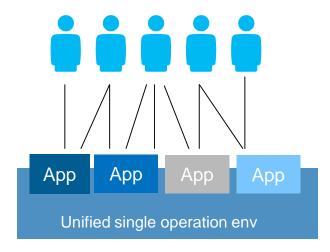

#### **Organize Multiple Apps in a Single Operational Environment**

#### The Approach

**Organize Multiple Apps in a Single Operational Environment** 

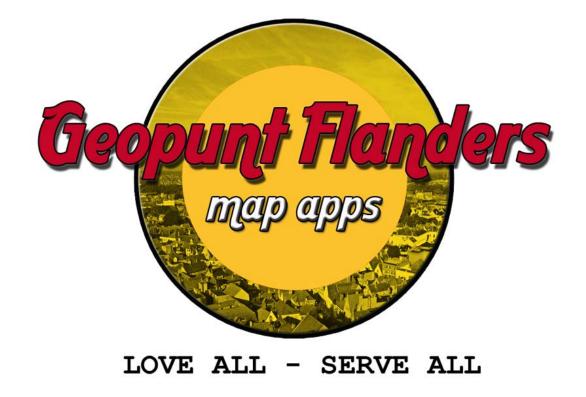

- An overall design pattern is needed for building larger systems as a set of interconnected apps
  - > map.apps covers that using OSGi principles on top of ArcGIS
- Complete decomposition of apps into their components ("bundles"); like a Lego system
- Bundles to be (re)-used many times and combined to deliver new value
- Apps are quickly created configurations (pre-configured or at runtime) from bundles

### **Geopunt Flanders**

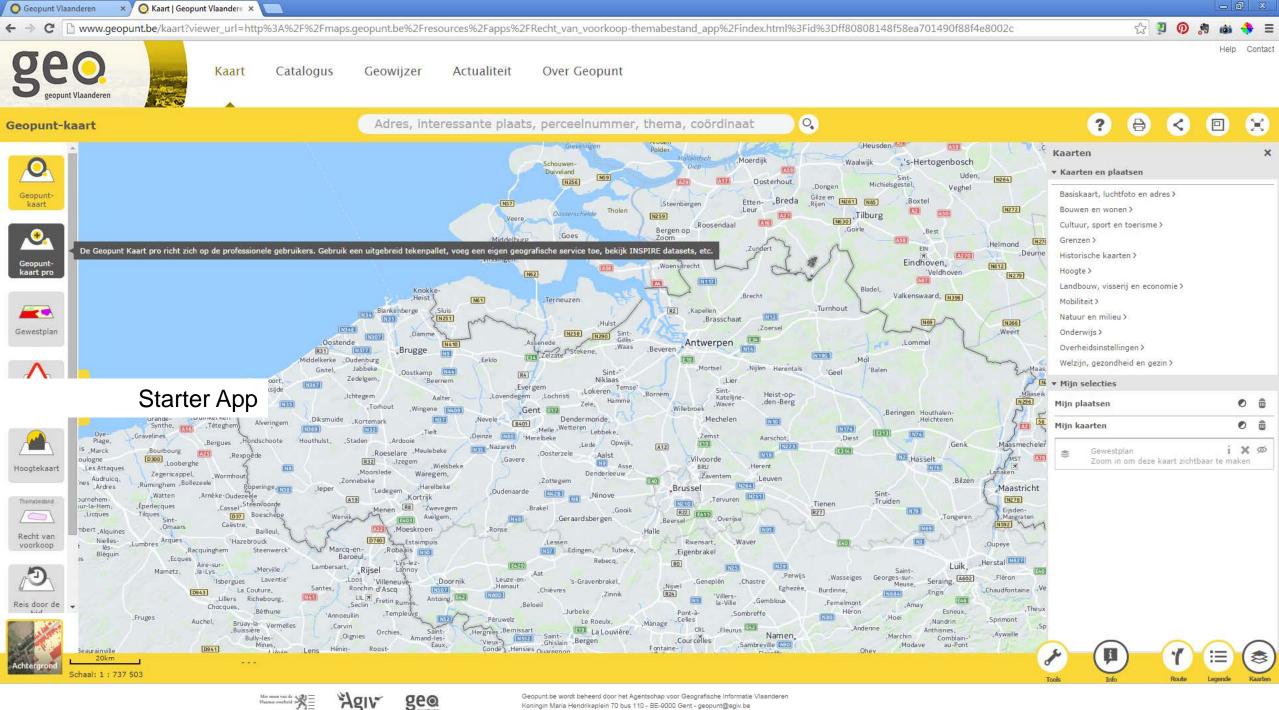

- Geoportal of the Flemish government
- Released in November 2013
- Caters user-friendly solution apps with a spatial focus for a variety of user groups
- Combines location- and layer-based information in an intuitive user interface
- framework of authorative and authentic data sources, backed up by a legal framework
- INSPIRE and OGC

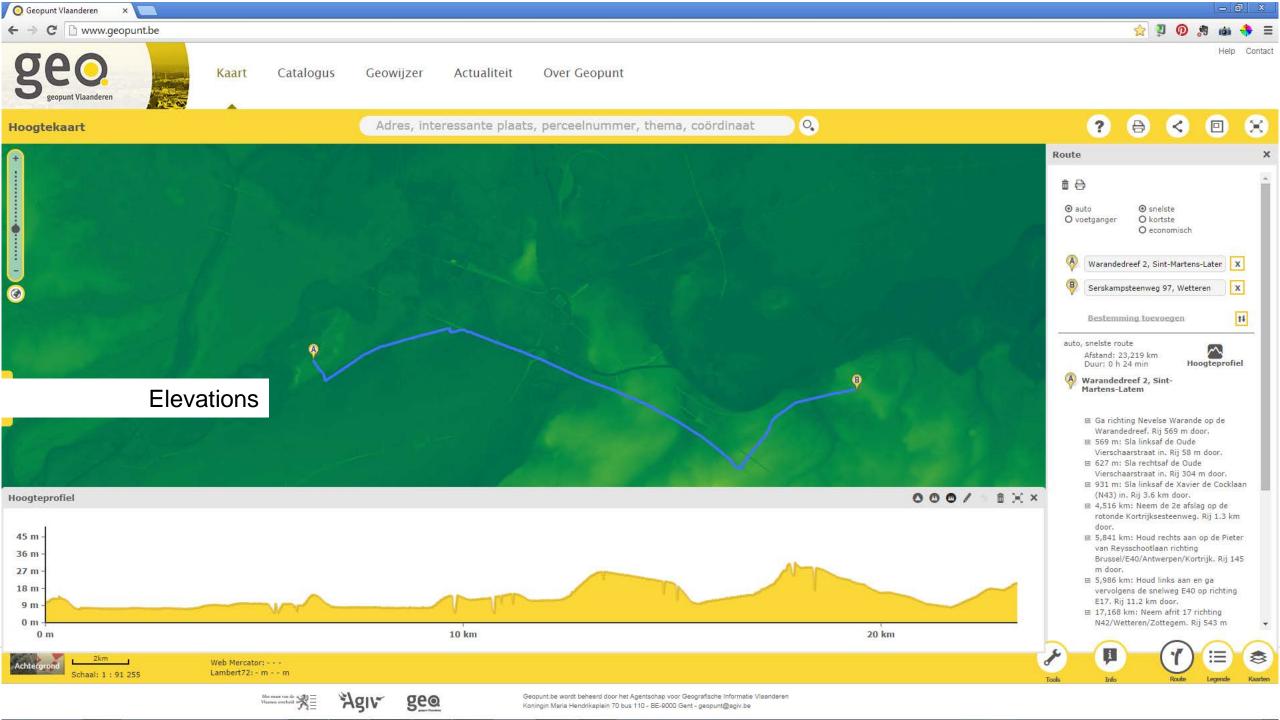

# A Lot of Users to Satisfy

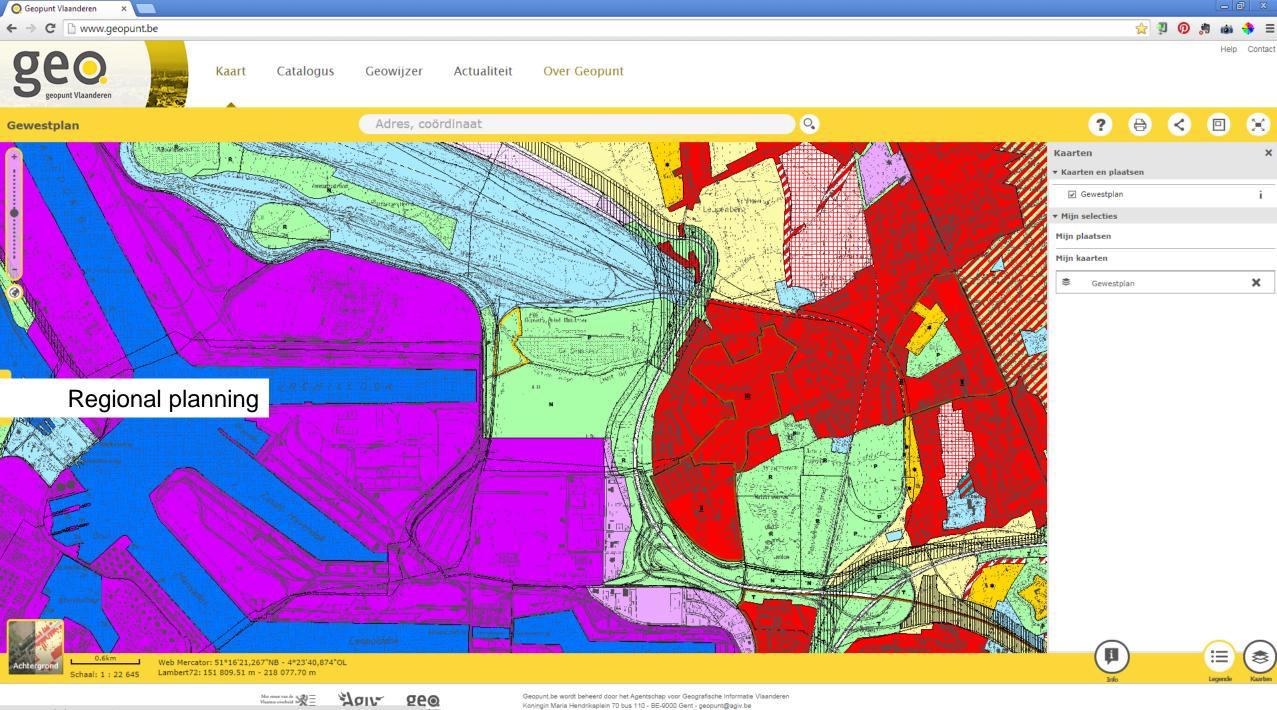

- Primary group:
  - > SDI Flanders participants;
    - > Local governments
    - > Flemish government
    - > Emergency services
    - > Education institutes
    - > Other public institutes
- Utility companies
- Software providers

- Secondary group:
  - > Other governments;
  - > Private sector: Surveyors, notaries, architects
- Tertiary group:
  - > Citizens
  - > Private sector: Building companies, real estate companies, ...

#### The Benefits

- User: Enjoy purpose-optimized, simple and appealing apps; private and professionals ("do business like you do facebook")
- IT Department: a single, central operational runtime and environment supports multiple apps; eases operations/mainteinance/upgrades and integration efforts
- Domain experts: Can build apps and contribute their domain knowledge directly, app's and their creation are not necessarily an it/development-only topic
- Management: Fast return in investment cycles, less upfront investments, extend in small, fast, usable steps
