

US Army Europe Sustainable Range Program

The Army Range Mapper (ARM)

Integrating the Delivery of Geospatial Products and Services Online

*Jimmy Batcheller and Kolade Ayorinde
USAREUR SRP GIS Regional Support Centre
Grafenwoehr, Germany*

Background

- The USAREUR SRP GIS RSC mission is to create, manage, and distribute authoritative standardized spatial information, products, and services for the execution of training on U.S. Army Europe ranges and training lands.
- The Army Range Mapper has been developed as an integrated platform for supporting the USAREUR SRP GIS mission online
- ARM currently disseminates geospatial information for training areas, ranges, Forward Operating Sites/Cooperative Security Locations (FOS/CSL) spread throughout EUCOM, AFRICOM, and CENTCOM
- ARM aims to provide a one-stop-shop for all USAREUR SRP customers, including the training war fighter community, range safety personnel and environmental GIS analysts

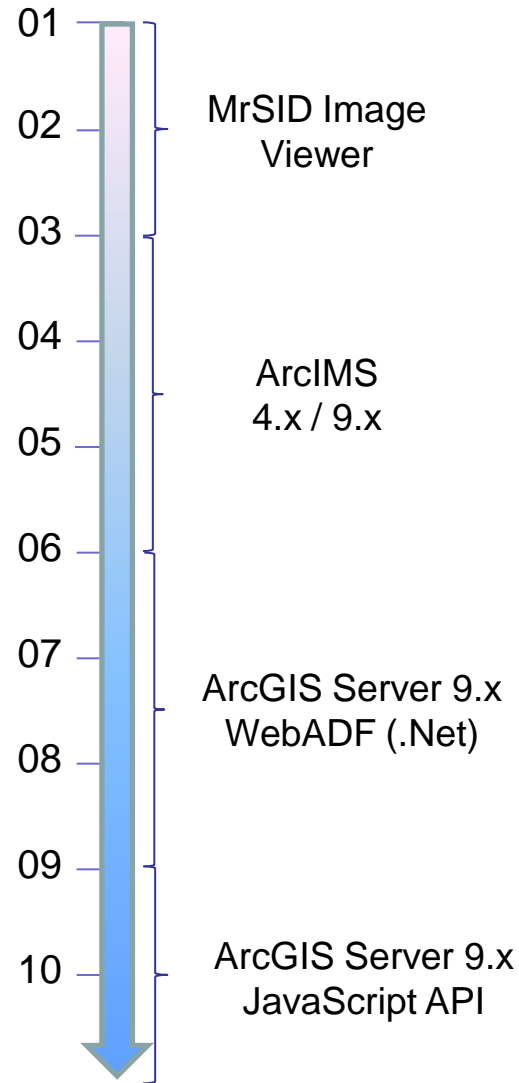

Application Overview

- NIPR solution
- Serving FOUO data
 - 180 training areas
 - across 23 countries
 - 3 commands
- ARM draws upon a 5 GB store of vector data and serves 15 GB of raster data
- Army Portfolio Management System (APMS)
- DIACAP – IATO, ATO pending approval
- Service Certificate of Networthiness (CoN)

A Brief Evolution of ARM

- Out-of-the-box web-based image viewer. No customization, limited functionality, no vector visualization
- ITAM Mapper – USAREUR’s pioneering application, tailored, based upon ArcIMS. Vector and raster data visualization, core GIS toolset. Performed well but little scope for future growth
- Subsequently redeployed using WebADF as an ArcGIS Server 9.2 application – improved service publication workflow and functional scalability
- Advances in functionality tempered by performance degradation. Optimization of application yielded minimal gains. A different approach was required
- Current application represents a move from server-side approach to one that places more of the workload on the client browser
- Significant performance gains, clearing the way for better integration of USAREUR SRP GIS products and services
- New approach – release of initially lightweight application upon which further iterations will build

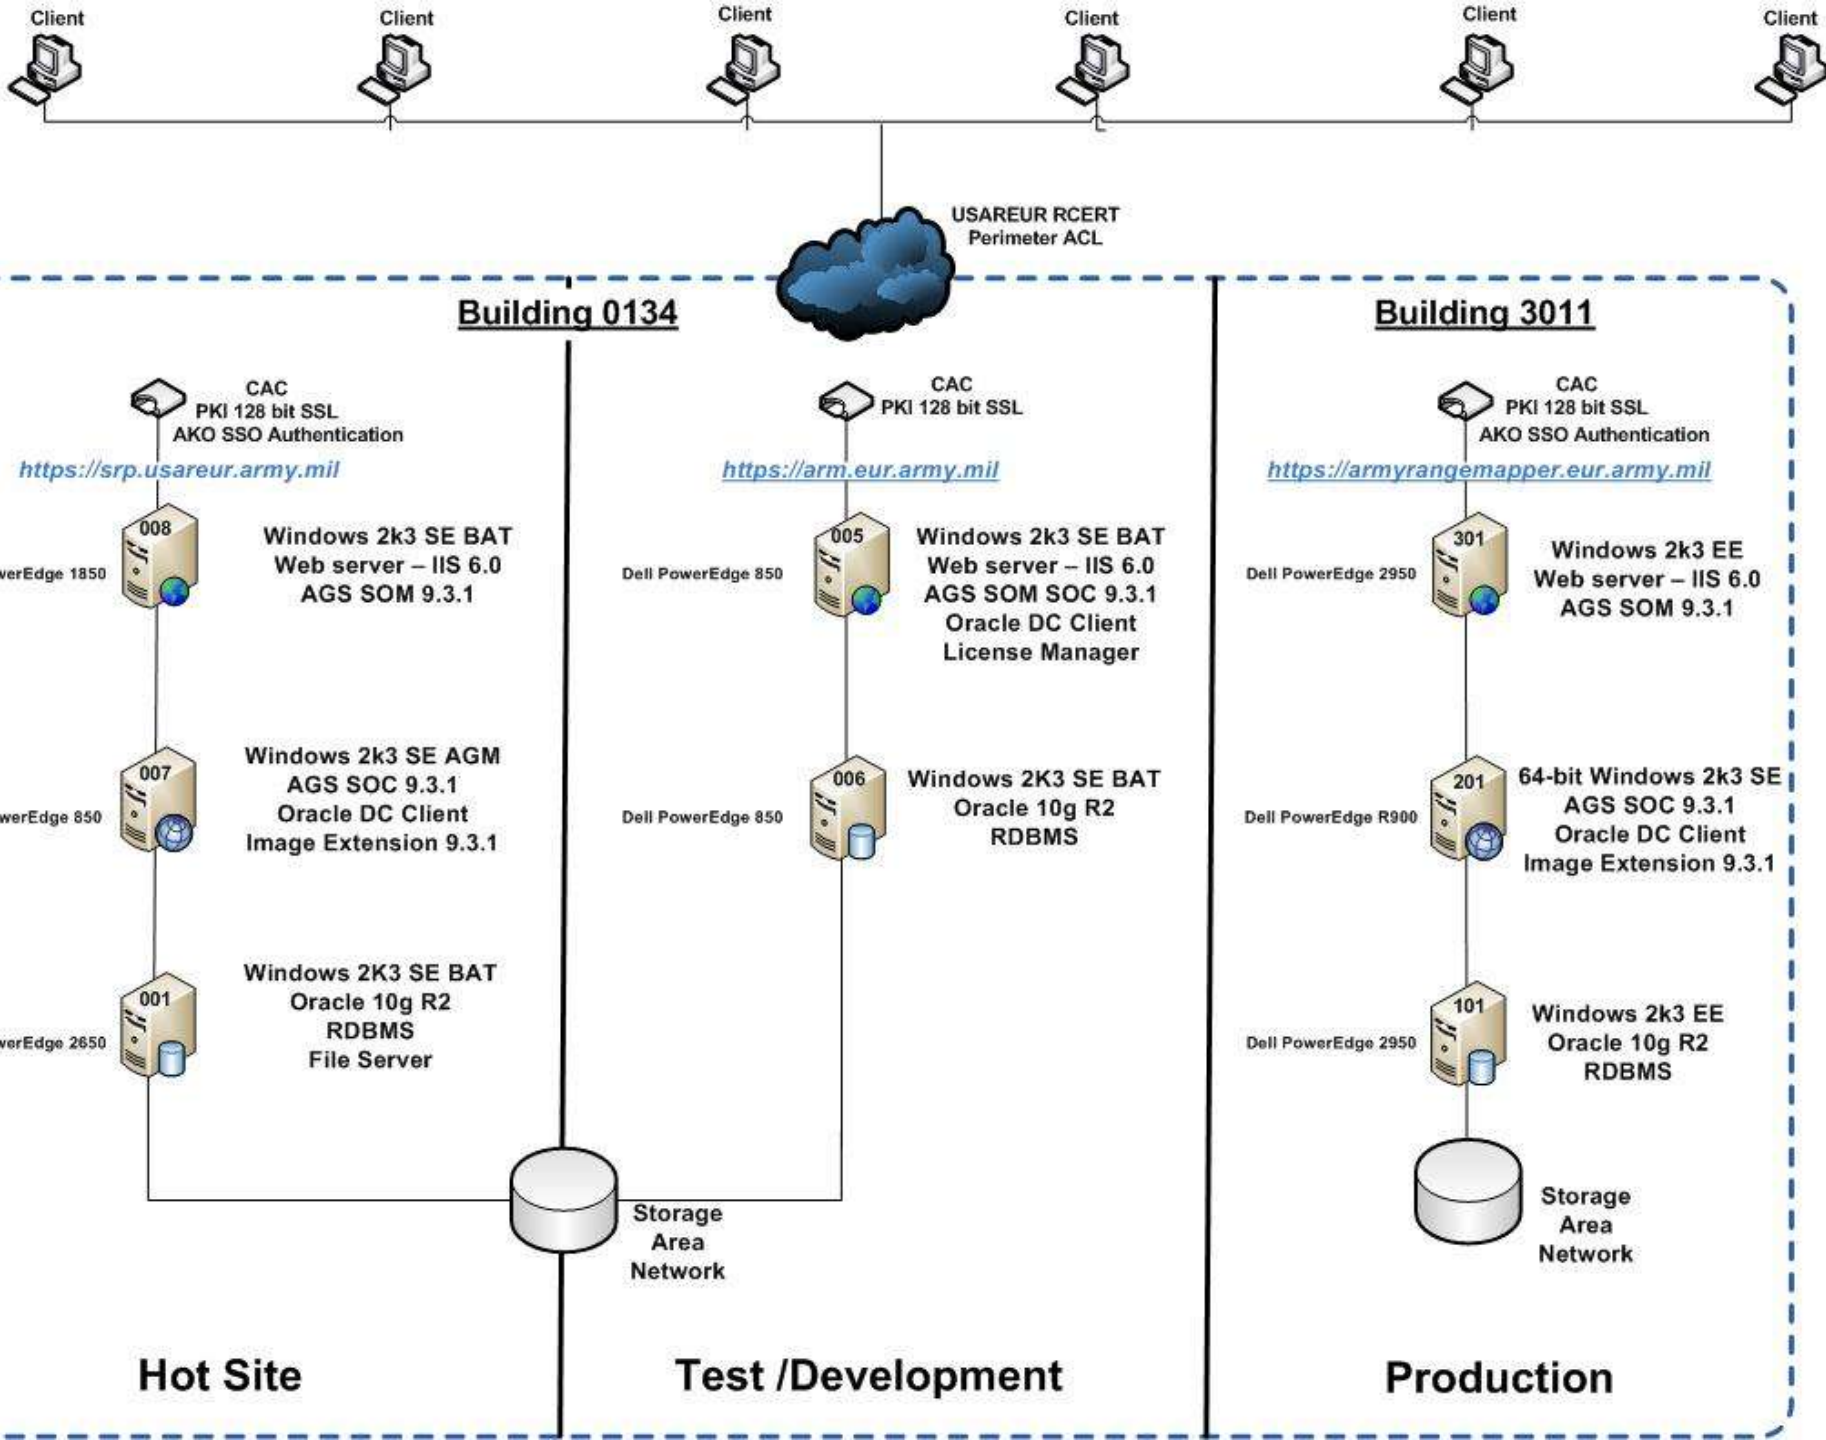

Test, Development & Evaluation Platform

- USAREUR SRP has a recognized role as a Test and Development center in support of DA SRP
- ARM provides a test-bed, integration and evaluation platform for
 - geospatial applications – ArcIMS, ArcGIS Server, Image Extension
 - development frameworks – Java, .Net, WebADF, JavaScript
 - custom utilities – Range Manager’s Tool Kit (RMTK)
 - architecture – role distribution, chipset
 - data storage strategies – vector, raster, projection
 - whitespace – NatureView, ArcGIS Online, Bing, Google
- Lessons learned comprehensively documented and communicated in reports, presentations, orally
 - DA SRP GIS UWG (SRP Mapper)
 - SRP Requirements to Army Mapper
 - DA SRP IT CCB
 - RMTK WG
 - USAREUR GIS UWG
 - DA events (SRP / TSS Workshops)
 - ESRI events – UC, DUG

Current System Environment

- Application: ArcGIS Server 9.3.1, JavaScript
- Webserver: Microsoft Internet Information Services (IIS) 6.0
- Geospatial Middleware: ArcSDE 9.3.1 Direct Connect (Oracle 10g/11g client), ArcGIS Server Image Extension 9.3.1
- Database Backend: Oracle 10g release 2
- Operating Environment: Microsoft Windows 2003 Server
- Client – Server Authentication, CAC enabled DoD PKI/SSL
- User Authentication – AKO SSO

One-Stop Shop

- Dynamic Data
 - Vector – Common Installation Picture (CIP) subset
 - Raster – Imagery, Military Topographic Maps
- Static Products (PDF)
 - Image Maps
 - Military Installation Maps (MIM)
 - Topographic Maps
 - Soldier Field Cards
- Physical Product Request
 - ITAM Viewer
 - Flight Simulator
 - Hardcopy Maps – printed, raised relief
 - Bespoke / On-demand Map

Dynamic Data

- Vector data – 1 global map service
 - Source – multi-user geodatabase
 - SDSFIE, DA SRP QAP profile (“advanced compliant”)
 - 15 Common Installation Picture (CIP) layers
 - Layers reprojected to Web Mercator – Auxiliary Sphere
- Raster data – 2 distinct Image Services
 - Source – flat files MrSID, TIFF, IMG, JP2
 - Imagery
 - Military Topographic Maps
 - Source projection maintained, Web Mercator (AS) services
- ‘White-space’ coverage – Bing Maps Service
 - Subscription
 - Hit-based

Partnerships

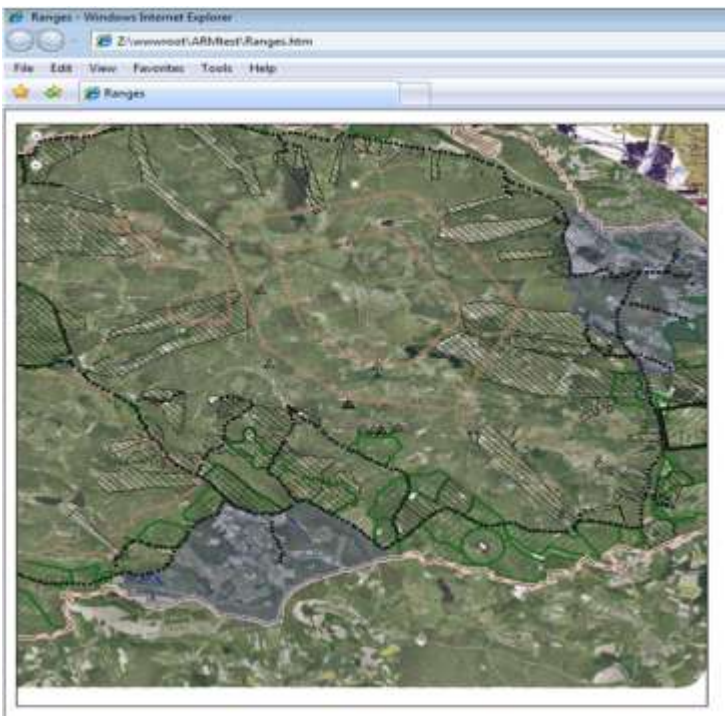

- Training and Resource Management System (TRMS)
- TCM-Live – Range Manager’s Tool Kit Online (WebRMTK)
- Range Facility Management Scheduling System (RFMSS)
- Further opportunities for collaboration...

- Via REST

https://armyrangemapper.eur.army.mil/ArcGIS/rest/services/USAREUR_INSTALLATIONS/MapServer

- Via query string (callable URL) – site-specific

<https://armyrangemapper.eur.army.mil/ARM/rangeviewer.aspx?InstallationName=Grafenwoehr>

•‘ARM-light’ embedded viewer

Physical Products

- Selection of products available for take-away
