National Institutes of Health U.S. Dept. of Health and Human Services

# National Library of Medicine

### **Overall Goals**

- Organize and provide access to healthrelated information
- Encourage use of high-quality information by health professionals and the public
- Conduct and support informatics research

### TOXNET/TRI

Latitude: 29 degrees 53 minutes 6 seconds

Longitude: 95 degrees 24 minutes 42 seconds

TRI 2009
BENZENE
SPRAGUE SEARSPORT TERMINAL
SEARSPORT, ME

#### On-site Releases of Chemical:

Non-Point Air Emissions Estimates:

Non-Point Air Release: 12 lbs./rep yr. 2009

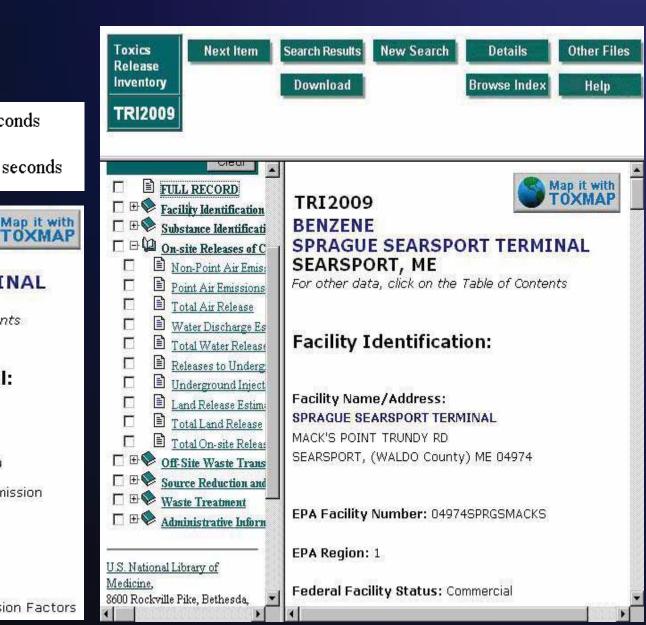

Basis of Estimate: (E2)Site-specific Emission

Factors

Point Air Emissions Estimates:

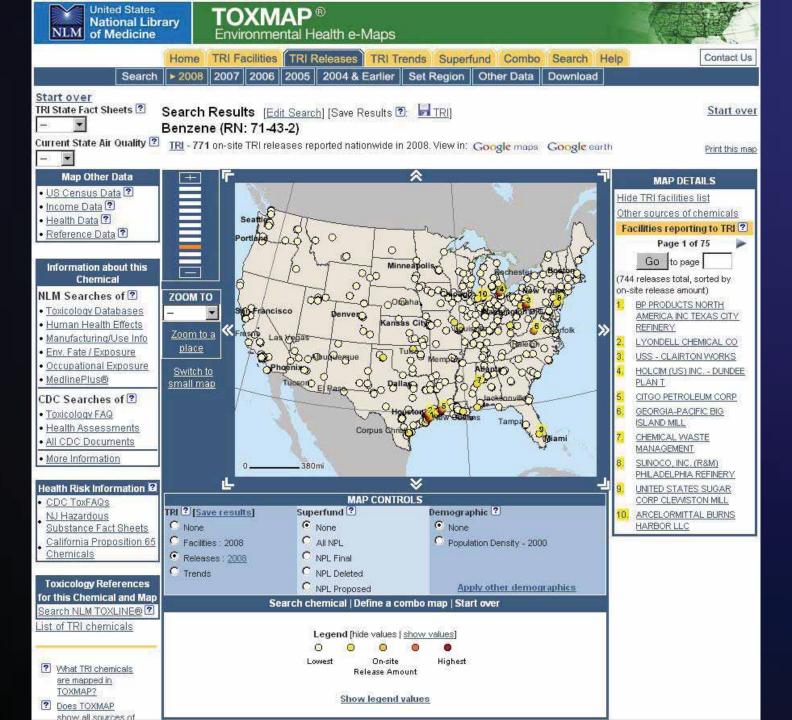

Point Air Release: 2 lbs./rep yr. 2009

Basis of Estimate: (E2)Site-specific Emission Factors

### What is TOXMAP?

- http://toxmap.nlm.nih.gov
- Public-facing NLM resource since Fall, 2004
- Health-centric GIS for EPA TRI and Superfund data
- Links to NLM, EPA, and CDC
- Usable by and useful to a variety of users
- Overlay demographic data
  - cancer/disease mortality, US Census, income
- Focus on area of interest via reusable regions
- ArcGIS Server / Flex version in development

### Old GIS Architecture

- ArcIMS 9.3, no ArcSDE
  - No \$\$\$ for Oracle or SQL Server license
- Data in shapefile or MySQL database
  - ~680 MB
- Construct maps via
  - hide/show shapefile layers
  - MySQL query, then acetate layer
  - SpatialFilter on shapefile layer
  - truncate acetate-based queries at 5,000
- One mortality layer dynamically updated

# Justification for Update

- The technology has evolved
  - In 2004, "interactive maps on the Internet" (e.g., ArcIMS) was a novelty
  - ESRI ArcGIS Server and related client APIs (e.g., Flex, Silverlight)
- User expectations have evolved
  - the "Google Maps Effect"
- Current architecture doesn't easily support new datasets and other growth
- Unify search implementations

# Challenges

- Re-thinking TOXMAP, not just re-implementing
- Deciding on a technology (Java Web ADF, JavaScript, Flex, Silverlight)
- No Flash, Flex, or geodatabase experience
- Technology moving under our feet (FlexViewer)
- Searching 1.9+ million records (TRI releases)
  - Sorting, color-coding, results page
- Only have an ArcView license
  - Use command line for geodatabase creation & editing
- Supporting both old and new versions
  - Requires two separate servers
- Decreased funding

# Demo

### Pre-release

- Revise Quick Search algorithm
- Refine pop-ups facility details
- Install & test on ArcGIS Server 10
- Develop intro screen
- Add cancer/disease mortality layers
- Add TRI 2009 data
- Fix bugs, glitches, snafus

### Full Release

- Conduct formal usability testing
- Incorporate feedback
- Update FAQ and other static content
- Add place finding and place history
- Add "some" advanced search
- Improve printing options
- Conduct all varieties of testing
- Fix bugs, glitches, snafus

# Beyond the initial release

- Regional filters (by state, county, shape)
- Add more advanced search capabilities
- Browse by facility, total releases, top chemicals (via clustering)
- Time-series release data
- Save search results
- Download TRI and Superfund data
- Fix bugs, glitches, snafus
