

2010 ESRI Health GIS Conference

Health Workers Retention: Spatial Analysis of Basic Services Using GIS

Benjamin K. Mayala

October 19, 2010

NATIONAL INSTITUTE FOR MEDICAL RESEARCH, TANZANIA

NIMR

Introduction

- ❑ Lack of basic services in some areas is one of the reasons for a health worker to migrate to a areas with better services
- ❑ Understanding the spatial distribution of basic services in a community is important
- ❑ Data on the existence of basic services in not well known

Infrastructure

NIMR

Objective

Determine the availability of basic key services that are important for health workers

- Focus - how health Workers can access services in terms of travel distance using GIS techniques

NIMR

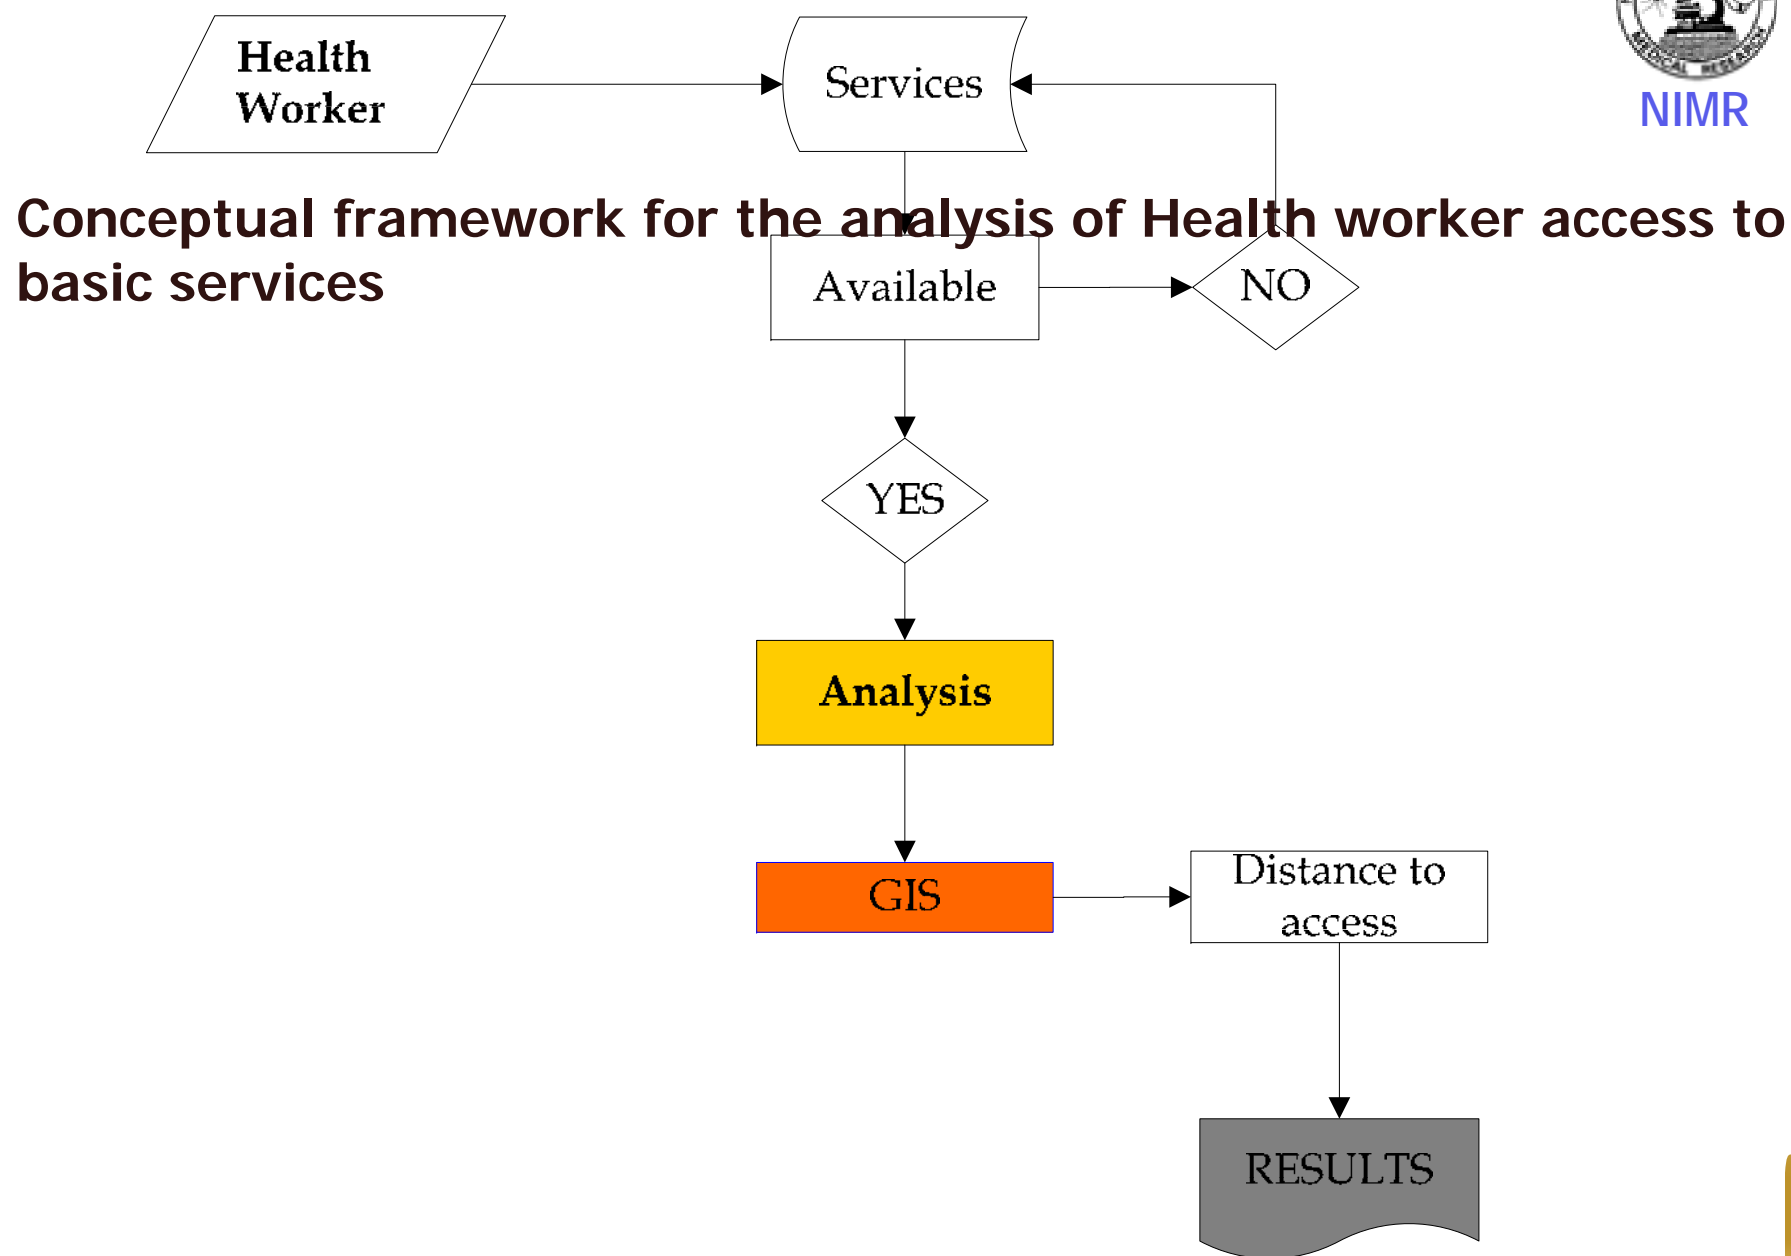

Specifically

GIS was used to establish a network that will consider *geographic position* and existence of key services that could influence retention of health workers (e.g. *bank, police post, markets, schools, post office, and water sources*)

NIMR

Methods

- ❑ 16 districts were selected
 - ❑ Urban and Rural
- ❑ All health care facilities (Hospital, Health Centre and dispensary)
- ❑ Interview health workers
- ❑ GPS locations of basic services
 - ❑ Health Facilities, Health workers HH, Water sources, Banks, Post office, Police post, Referral hospital, Shops/markets, schools
- ❑ Buffer and Point distance analysis

NIMR

Methods Cont...

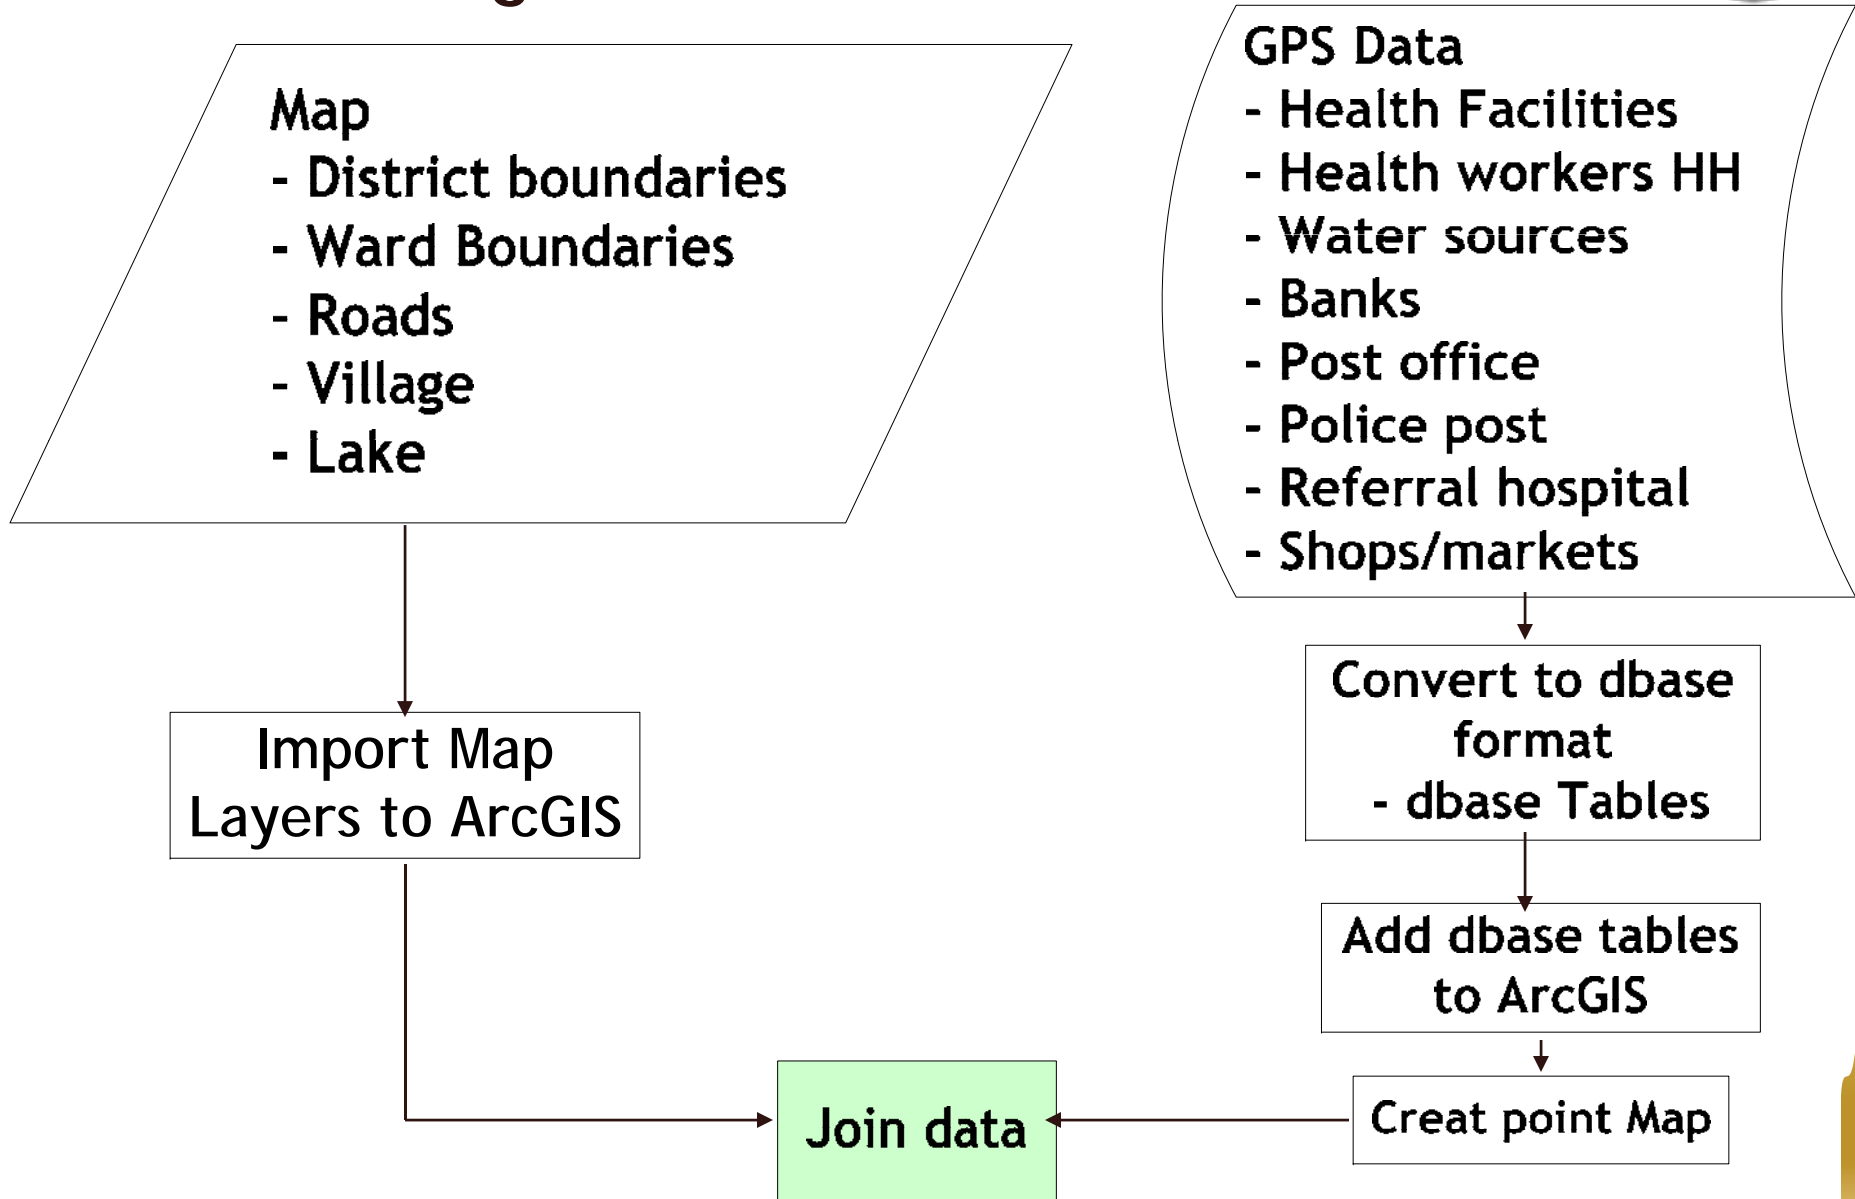

Health Facility

Water source

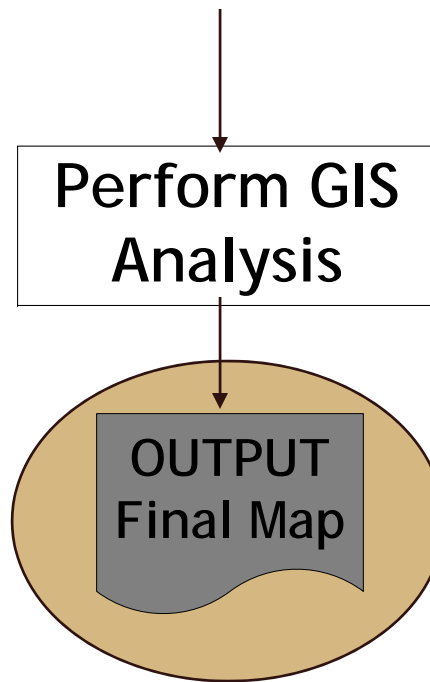

Methodological Flow

NIMR

NIMR

Results

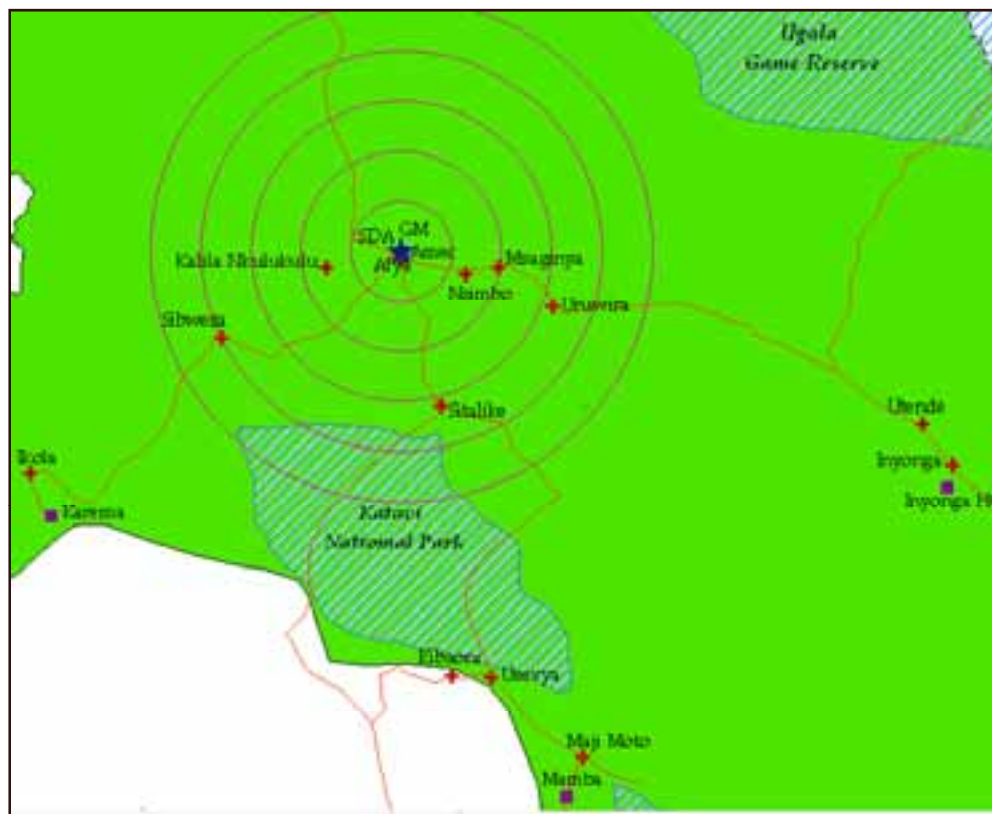

NIMR

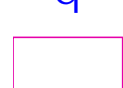

Location of Services

- Analysis revealed areas that were significantly accessible and/or underserved
- Results from GIS point analysis show that HW might travel a distance up to 200km to seek for services (bank), with an estimated travel time of 4 to 6 hours or more

NIMR

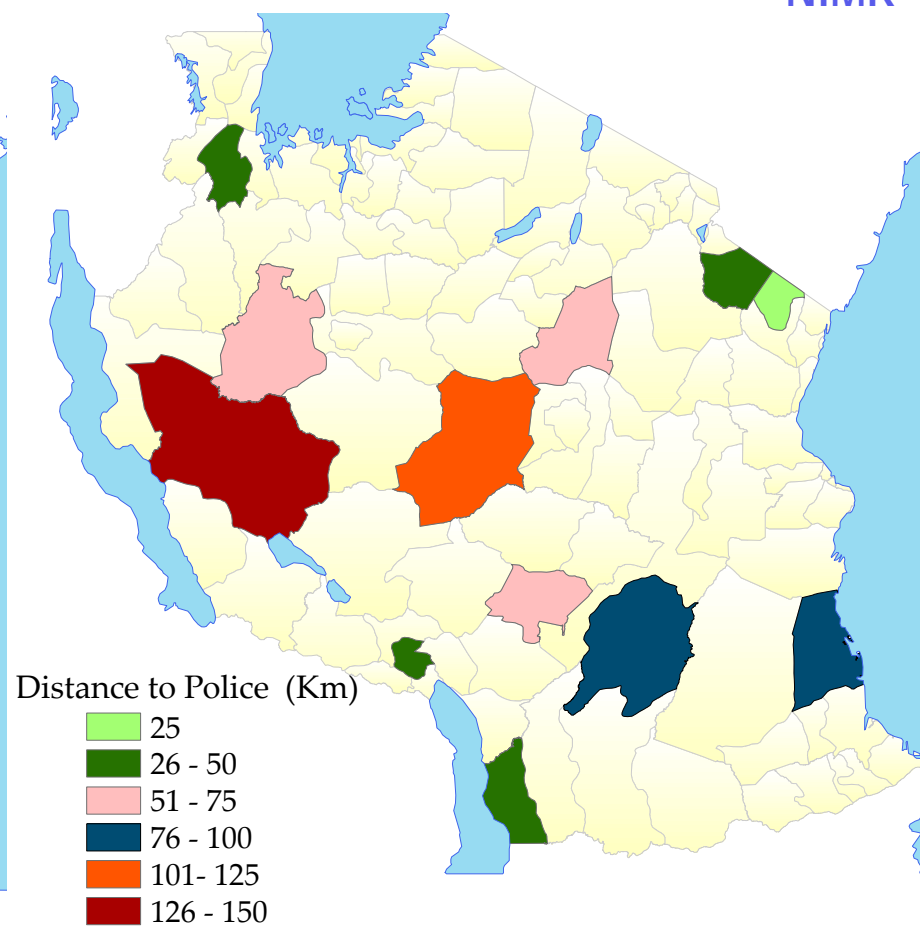

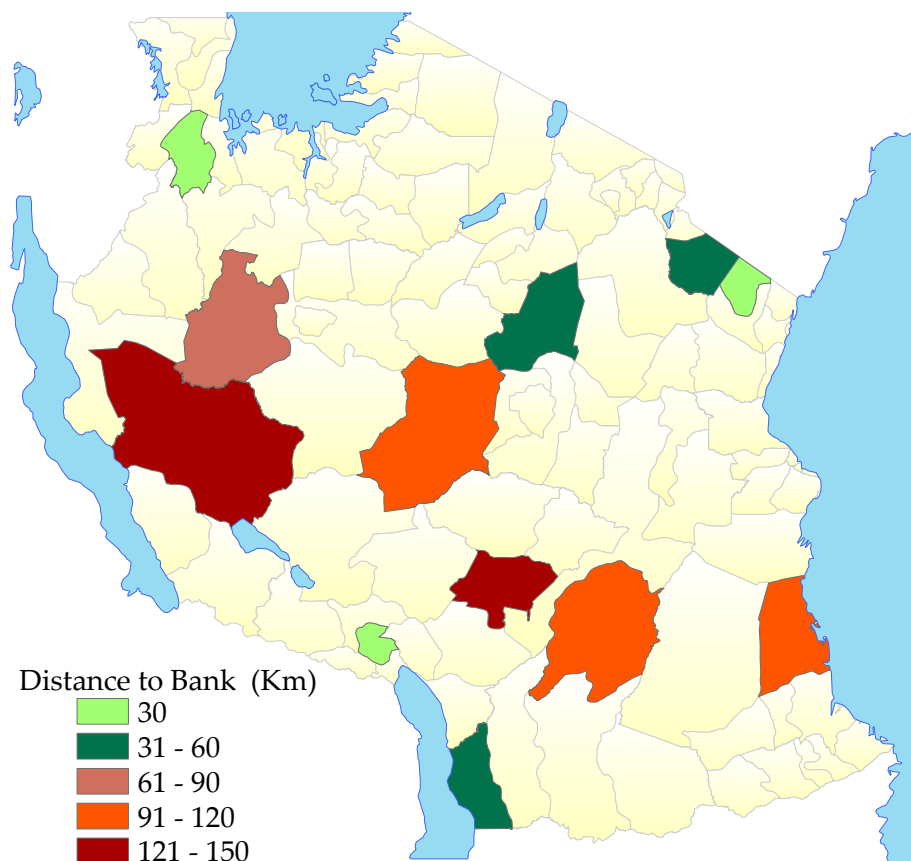

-  Road
-  Bank
-  Dispensary
-  Health Centre
-  Hospital
-  Distance 10-50 km

3km buffer
from a road

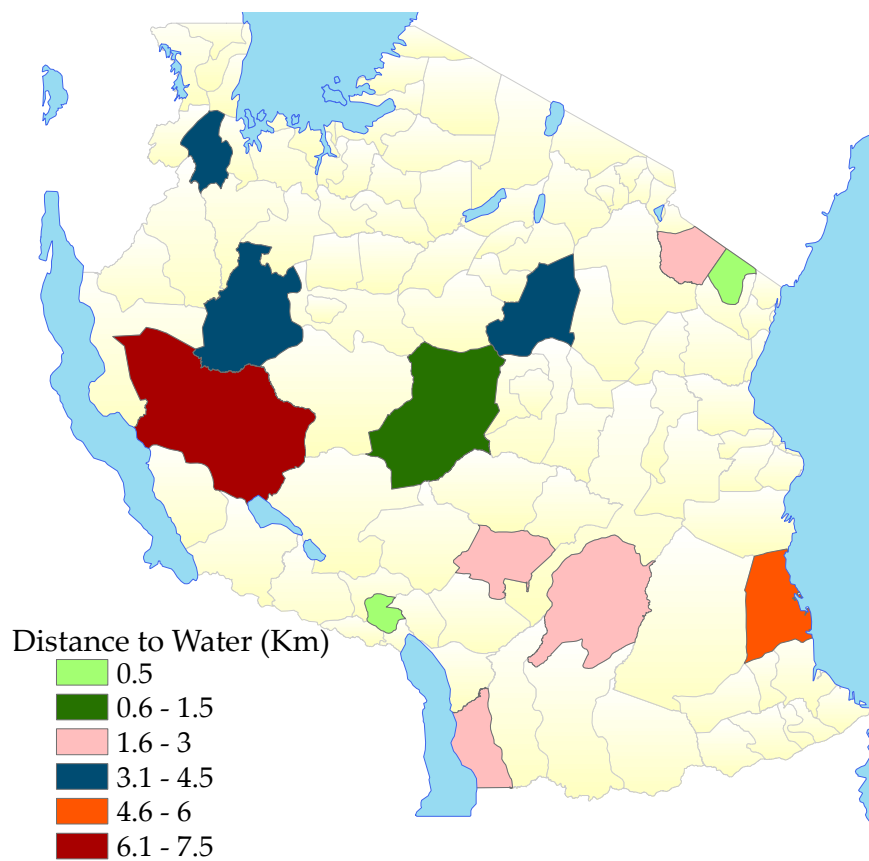

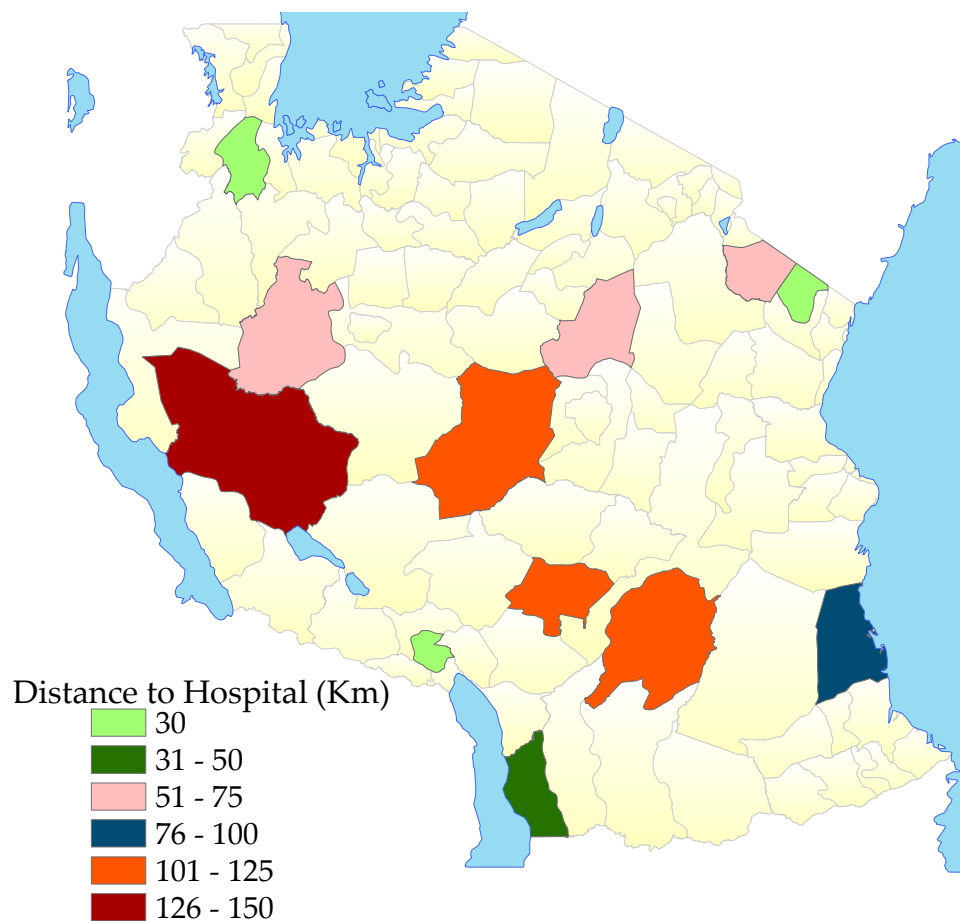

NIMR

Conclusion

- ❑ GIS - an approach to determine spatial distribution of existing basic services
- ❑ GIS - demonstrates how health worker can access services
 - ❑ Overlay different maps
 - ❑ More weight (i.e. planning) can be given into those areas which lack services
