Abstract

Salmonid Habitat Restoration Cost Database and Analysis
Track: Forestry, Wildlife, and Fisheries Management
Author(s): K. Hildner, Cindy Thomson, Robin Carlson

Twelve California salmonid stocks are currently listed as threatened or endangered under the Endangered Species Act (ESA). Although the ESA requires that recovery plans incorporate cost information, to date very little has been published on salmonid habitat restoration costs. To help fill this void, the California Habitat Restoration Project Database (CHRPD) was created through a collaborative agreement between the National Marine Fisheries Service, the California Department of Fish and Game, and the Pacific States Marine Fisheries Commission. We will present the integration of this database with GIS and the results of preliminary analyses relating costs to spatial variables.
