Abstract

At Sanborn we have developed a client tracking and status system that is called SanTrack. This paper covers the migration of this tool from ArcIMS 3.1 to 4. We cover problems, enhancements that we were able to add, and tricks and tips that were uncovered along the way. We will address issues and solutions found in installing ArcIMS 4. The paper will also address how Sanborn uses the ArcMap Server for ArcIMS 4 with SanTrack.
