Abstract

Describing How ASP, ColdFusion, and JSP are Used With ArcIMS
Track: Application Development
Author(s): Karen Robine

As ArcIMS continues to lead the way in Web-based geographic mapping software, this presentation describes three internet technologies, namely ASP, ColdFusion, and JSP, and outlines how each is used with ArcIMS for building dynamic, interactive Web sites. ArcIMS examples utilizing these tools are shown and some differences between each of them are described. Finally, some ideas as to where each of these technologies is heading will be discussed.
