Abstract

Army ITAM GIS: Program Strategy to Support Sustainable Army Ranges
Track: Defense and Intelligence
Author(s): Paul Dubois

The Army Integrated Training Area Management (ITAM) Program is operated by the Office of the Deputy Chief of Staff for Operations (ODCSOPS/G-3) to ensure sustainable and realistic training and testing on Army installations. The ITAM Program includes four components that provide standardized data collection, decision support, soldier education, and land rehabilitation of training and testing ranges. The ITAM GIS Program strategy incorporates standardized databases, mapping formats and layouts, centralized support and training, and effective business practices to provide war fighter decision support on all ITAM installations.
