Abstract

Geospatial One-Stop Efforts at USDOT
Track: Federal Government Systems
Author(s): Carol Brandt

The Bureau of Transportation Statistics is the lead within USDOT for one of the major e-government initiatives, the Geospatial One-Stop. Major goals include developing geospatial data content standards, developing a Web portal to provide easier access to these data from various sources, and posting information about planned Federal geospatial data collection activities to encourage partnerships. This initiative will have a positive impact on the GIS community by promoting standards, data accessibility, and collaboration. We anticipate the private sector will develop tools to take advantage of these standardized geospatial data to better serve government agencies and the public.
