Abstract

What's Your Score? Implementing the Geospatial Technology Competency Model

Track: Education

Author(s): Heather Annulis, Cyndi Gaudet, Jon Carr

The Geospatial Technology Competency Model (GTCM) identifies the knowledge, skills, and abilities needed for employees to be successful in the geospatial industry. The value of this model is measured by its implementation as a tool for performance management, employee recruitment and selection, career development, and as a curriculum framework for training and education. Learn to evaluate an organization's preparedness to implement the GTCM with the Competency Model Implementation Scorecard. This innovative tool will help geospatial companies respond to workforce needs.
