Abstract

GIS for Modeling and Analysis of Commercial Data Compilation
Track: Database Design, Automation, and Management
Author(s): Todd Crane, Brian Scaffidi

This paper will discuss the benefits of using GIS internally at GDT.

We will review the data compilation process and describe how GDT has successfully incorporated ESRI software with proprietary systems to produce high-quality spatial database products. We will discuss how ESRI technology is utilized 'out of the box' as well as how it's been deployed within custom-built tools and applications.
