Abstract

DC Atlas: A GIS Tool for DC Agencies
Track: State and Local Government
Author(s): Mohammad Tariq, Amir Razavi

The District of Columbia (DC) Office of Chief Technology Officer has implemented a citywide Geographic Information System (DC GIS). One of the main objectives of the DC GIS is to provide access to GIS data to the DC agencies through the DC WAN. The DC Atlas, an Intranet application built with ArcIMS, is a user-friendly way to browse and analyze the GIS data that DC GIS has created. Several generic applications have been developed as part of DC Atlas to help the DC employees in viewing and analyzing GIS data.
