Abstract

Building the USDA-Service Center Geospatial Data Gateway Using ArcIMS
Track: Global and National Spatial Data Infrastructure
Author(s): Wendall Oaks, Steven Nechero, Carol Lloyd

Using ArcIMS and ArcSDE, for three years the USDA Service Center Agencies including NRCS, FSA, and RD have been building the Geospatial Data Gateway. This Web-based application is a "One Stop" shop for cataloging, discovering, and delivering geospatial data resources. The unique interface allows easy and convenient access to terrabytes of geospatial data. The Gateway has become a cornerstone to the management and delivery of the agencies' geospatial data.
