Abstract

This paper will describe the Watershed Boundary Dataset (WBD)/National Hydrography Dataset (NHD) Query Tool ArcView Extension developed by the Wyoming Geographic Information Science Center (WyGISC) at the University of Wyoming. The Bureau of Land Management funded development of this tool to facilitate the use of the WBD, NHD, and Proper Functioning Condition (PFC) riparian summary data. This tool can be used to query either the WBD with the NHD or the NHD with the WBD and receive a summary of query results. With this extension both experienced and inexperienced GIS users can work with two important high resolution national datasets.
