Abstract

**Corporate GIS Management**  
**Track:** System Implementation for GIS  
**Author(s):** Marc van Nes

Shell Expro (UK) has rolled out ArcGIS 8.2 as a corporate GIS system, with currently more than 150 registered users throughout the business. Although most of the corporate data resides in Oracle databases, available through ArcSDE, a lot of (project) data and all layer files and templates are maintained and accessed from a central W2000 server. Final maps are stored in a corporate EDMS. The presentation discusses issues around maintaining GIS layer integrity, GIS project management (local and corporate), and final map storage.
