Abstract

Applying ArcGIS to Focus Shell’s Hydrocarbon Expiration in Europe
Track: Petroleum
Author(s): Gerard Bosman

Shell builds a portal to access data, information, and knowledge (KID) stored in its corporate databases and document management systems. Current access includes data and documents held in all North Sea-based Shell companies (UK, Norway, and the Netherlands). ArcIMS is an elementary part of this portal, as it provides spatial search and browsing functionality to complement textual searches. Through synchronising spatial and textual search screens (listening windows) users can easily navigate and access the KID, regardless of whether this is stored in the UK, Norway, or the Netherlands.
