Abstract

Commerce GIS Integration in the Kingdom of Bahrain, Middle East
Track: Business, Banking, and Insurance
Author(s): Neeraj Dixit

Recent advancement in Internet technology and its reach to common peoples has made many organizations think globally, cutting across local/regional barriers. Today, applications of GIS in business are seen as an advantage. In the Kingdom of Bahrain, Bahrain Center for Studies and Research and Ministry of Commerce have taken the initiative to spread the spatial factor to common businessmen. They will be using GIS to spread their geographical presence everywhere by reaching locations for the first time in this region. ArcIMS, Oracle, and other Web technology are used to develop the integrated Commerce and GIS application solution.
