Abstract

The Ministry of Economy within plans of the National System of Public Investment, has initiated a test Pilot to share geographic and statistical information at inter-ministerial level. The objective is to demonstrate the viability of sharing standard information GIS at the level of the State to help tasks of identification, formulation, evaluation, and planning of projects of public investment. This Project used the Shape Format, geographic projection and datum WGS84. The generating Organizations of Information keep information in the server from the Ministry of Transports with interchange format and soon the usary Organizations accede to this server and use the information.
