Abstract

Integrating ArcIMS Into an Online Title Insurance Collaboration System
Track: Application Development
Author(s): David Askov, Dina Blackstone

Commonwealth Land Title Company developed a prototype Internet application to allow its clients to collaborate with each other and Commonwealth staff during the preparation of title insurance reports. Commonwealth contracted IGIS Technologies to integrate ArcIMS web mapping functionality into this system. This Internet application uses ArcIMS to find any recorded documents that overlap their development plans, display them for the user on the map, open scanned copies of the documents, and open the attribute tables of the features. The user can follow hyperlinks from their title reports to view the maps, or they have the option of viewing a report that ArcIMS creates showing all the documents that overlap their lots.
