USAFE GeoBase: Developing and Deploying an Enterprise GIS Throughout USAFE
Track: Defense and Intelligence
Author(s): James Irvine

USAFE GIO started operation April 2003. The office consists of a USAFE DOD Project Manager, with four contractors: GeoBase lead, a DBA, and two GeoReach personnel. USAFE switched from MicroStation/GeoMedia to AutoCAD/ArcGIS 2003. Data is stored in Oracle/ArcSDE using SDSFIE. ArcIMS is the window for general users. Dell is the hardware platform. December 2003 culminated in hardware/software deliveries and data conversion. GeoBase configured hardware/software. DBA uploaded data. GeoReach started mapping, serving initially from a desktop as world events evolved. February-April 2003, systems were deployed to the MOBs and GSUs with refinements May 2003. June 2003, MOB/GSU GIO positions are hired.
