Paper UC1173

Imperial County: Web Deployment of GIS Basemap

Author(s): Jose M. Rodriguez, Jr., Srinivas Suryanarayanaiah

This presentation will describe and showcase Imperial County's Internet based deployment of their GIS Basemap (parcel, centerlines, tax roll, recorded document scans, etc.). Since creating their GIS in 2003, Imperial County and its ICGIS users (cities, Caltrans, etc.) access the GIS Basemap data using a GIS application service provider and consultant that employs ArcIMS and SDE software together with Microsoft.net technology. This solution provides Imperial County and its partners not only with the latest in GIS technology, but also provides them with some value added features such as red lining tool, query builder, document manager, mailing label wizard, etc. This presentation will also include a demonstration of the solution.
