

# Utility Asset Management Solutions

Improving Capital Project and Asset Management Success with ESRI Technology

Gary McFarland, Goleta Water District

Jerry Colwell, TAG The | Asset | Group

# Abstract

Goleta Water District is implementing an end-to-end asset management solution to support its multi-million dollar water treatment system upgrade. The solution manages project and asset data during the capital improvement design and construction phases and supports long-term operations and maintenance requirements. The solution consists of ESRI ArcInfo and ESRI ArcIMS integrated with Goleta's Work and Maintenance Management and Integrated Content Management systems.

A key feature of Goleta's solution is the ability to capture and view documents, pictures, PDFs, and other unstructured content from within the GIS. Goleta can now leverage information such as operating procedures, maintenance manuals, commissioning reports and record drawings produced during the construction phase to support operations and maintenance activities once the assets are installed.

System development included conversion of Goleta's existing AutoCAD and MapGuide applications to an enterprise ESRI ArcInfo GIS and ArcIMS Web solution. This paper will discuss Goleta's project objectives, implementation process, and benefits achieved.

# Goleta Water District Overview

- **Established  
November 17, 1944**
- **Mission is to supply  
quality water at the  
most reasonable cost  
to the present and  
future customers**
- **Serves south coast of  
Santa Barbara County  
to El Capitan**
- **Provides water to  
approximately  
75,000 people  
through 230 miles of  
pipeline**

# Project Overview

**End-to-end asset management solution to support treatment plant upgrade**

- **Manages asset data during design and construction**
- **Supports long-term operations & maintenance**
- **Integrates ESRI ArcInfo, ESRI ArcIMS, Work & Maintenance Mgt, Content Management**
- **Provides ability to capture and view documents, pictures, and other unstructured content from within the GIS**

# Project Goals

**Effectively manage \$22M treatment plant upgrade project**

- Design iteration drawings
- Project communication and coordination with contractors
- Transition as-built asset data to operations and maintenance functions

**Implement a work and maintenance management system**

- Manage the new treatment plant assets
- Manage existing transmission and distribution assets

**Migrate GIS to ESRI platform and provide Web portal for asset information**

- Manage GIS related asset data
- Easy Web accessibility to GIS asset data

# Project Approach

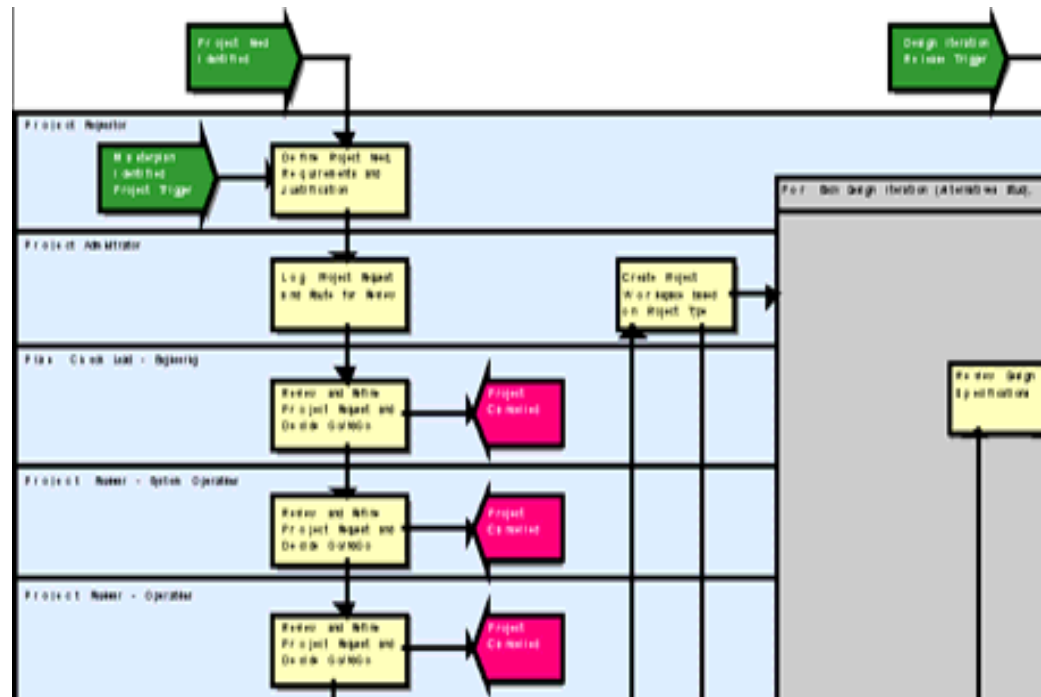

- Strong executive sponsorship with clear business objectives
- Focus on end-to-end business process optimization
  - Three major processes required to enable business objectives
  - Model to-be business processes and roles
  - Defined required capabilities for the solution
  - Not a technology focus
- Design, configure, and implement integrated solutions to provide required capabilities
  - Used iterative design approach

# Process Overview

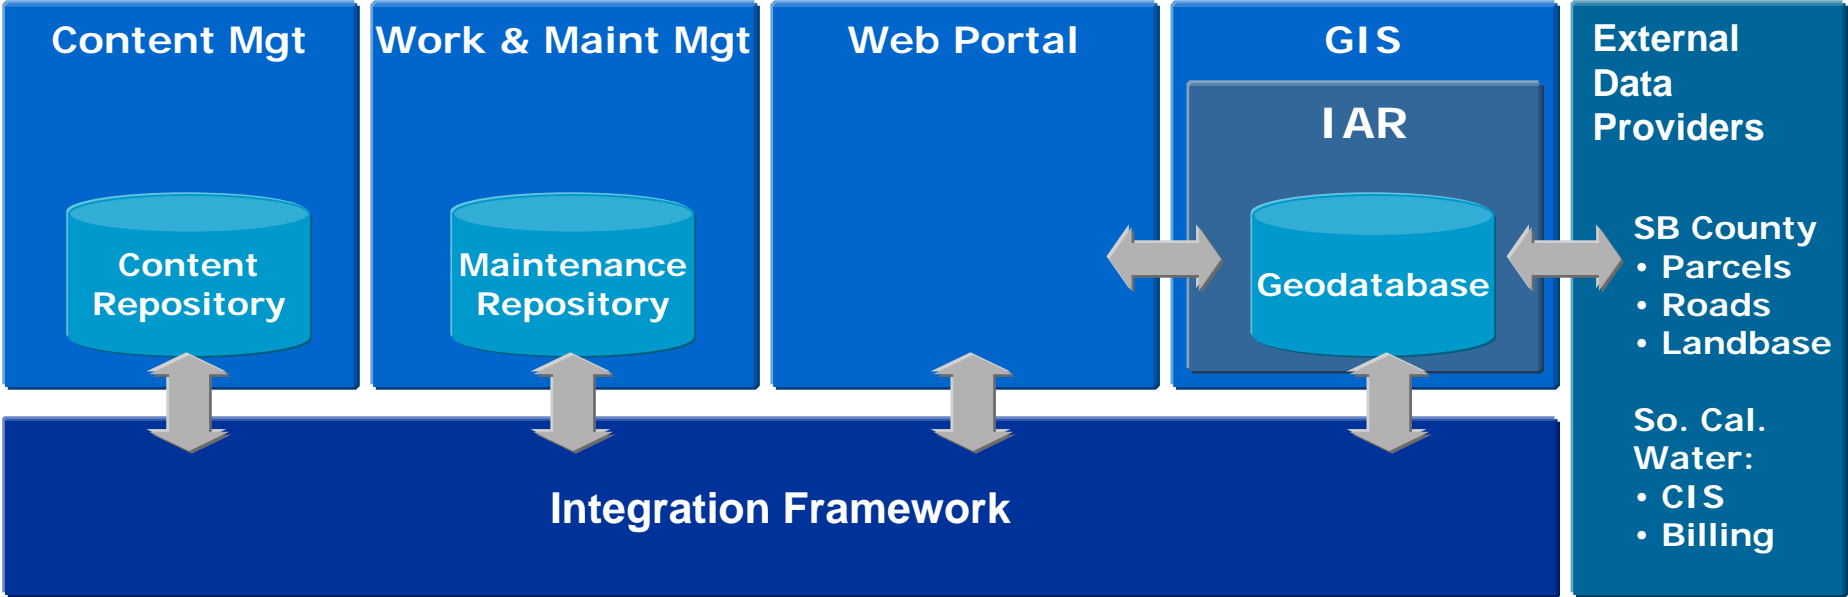

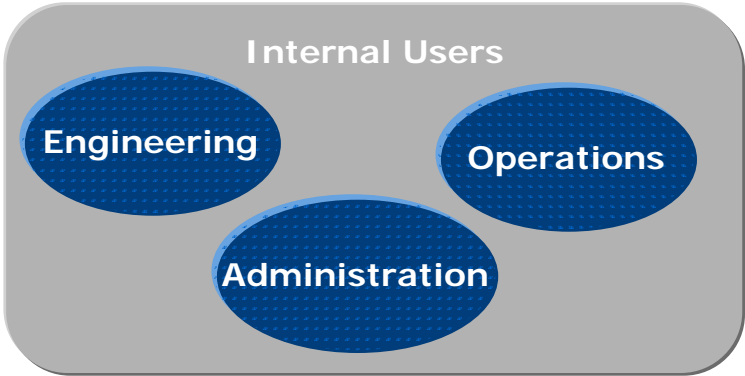

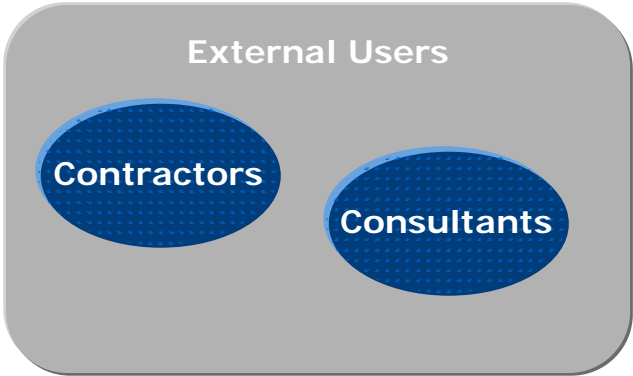

## Primary processes:

- Major capital projects
- Planned system maintenance
- Manage developer/new customer projects
- Define business roles and map to people
- Define end-to-end processes and activities

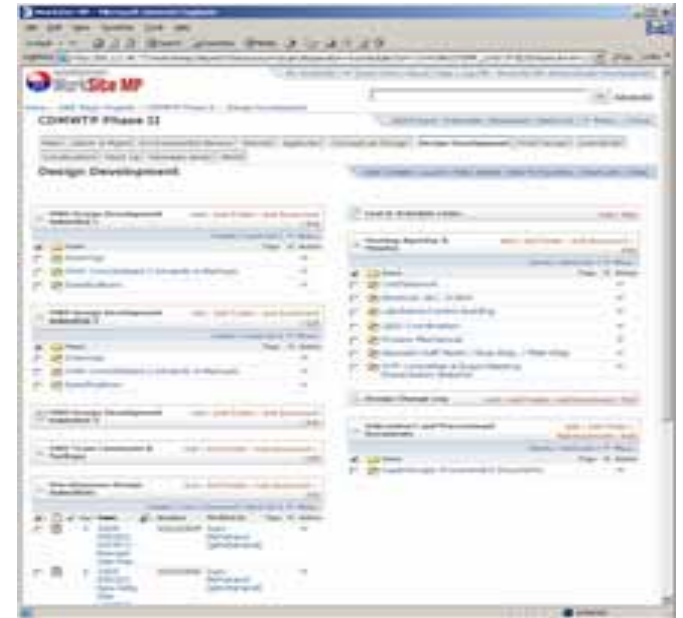

# Technology Overview

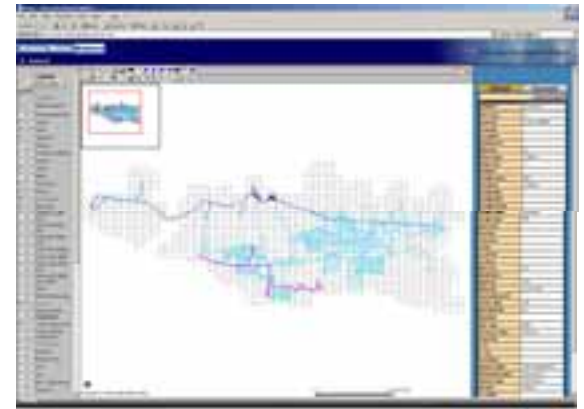

# Content Management Solution

- **Interwoven WorkSite MP - easy-to-use, secure web-based interface**
- **Manages maintenance manuals, reference manuals, legal documents**
- **Powerful content categorization and search capabilities**
- **Manages and controls versions and access to unstructured content**
- **Auditing features decrease risk and increase regulatory compliance**
- **Collaborative project workspaces allow consultants and contractors to interface with the utility**
- **Submittals, designs, invoices, etc. can be uploaded for review and redline via approval workflow process**

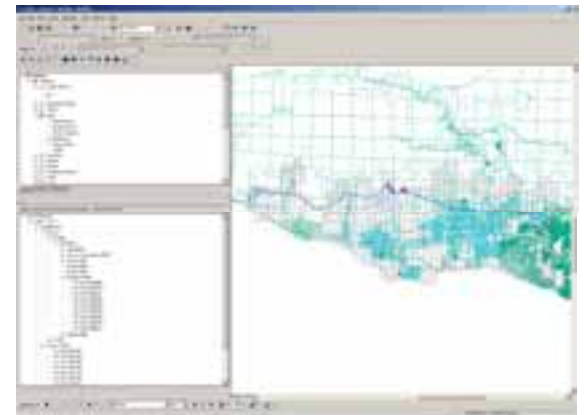

# GIS Solution

- **AutoCAD MapGuide converted to ESRI**
- **ArcSDE Geodatabase**
- **Web GIS portal**
  - **Integrated with Content Management and Work & Maintenance Management**
  - **Provides easy access to spatial and non-spatial asset data**
- **Integrated Asset Register**
  - **Built on the ArcGIS platform**
  - **Provides standard hierarchical structure for assets**
  - **Integrates hierarchy with non-spatial asset systems**

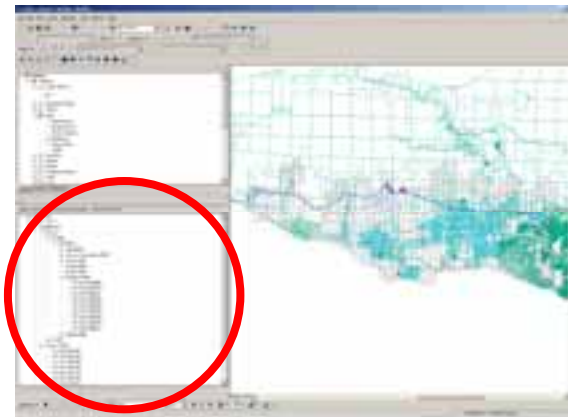

**Web GIS Portal**

**Integrated Asset Register**

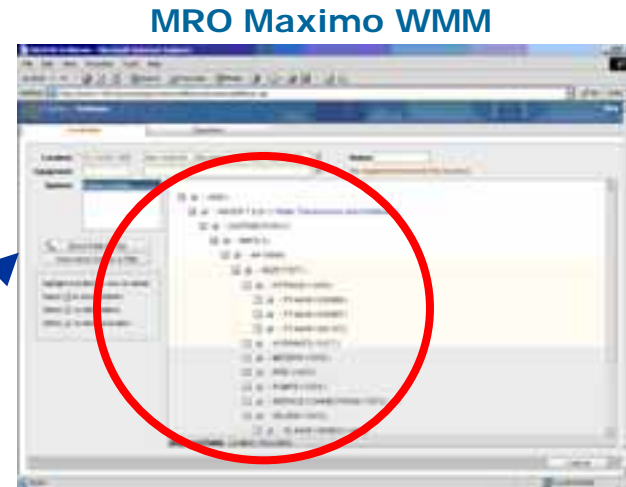

# Asset Hierarchy

- Provides common way to organize and locate assets
- GIS integration synchronizes spatial assets and asset hierarchies with non-spatial systems
- Spatial and attribute-based business rules allow system to automatically place assets within the asset hierarchy

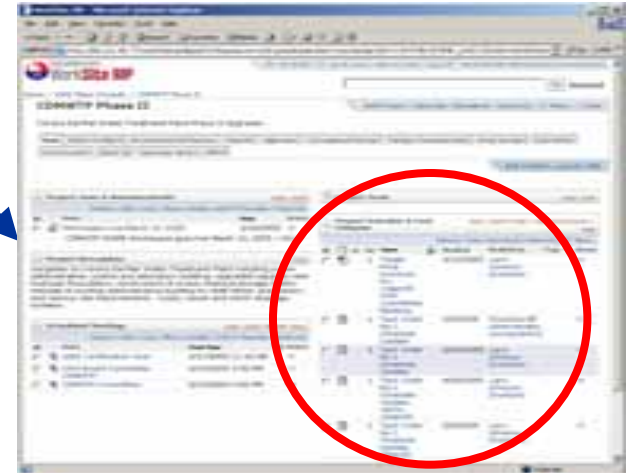

Integrated Asset Register/GIS

Systems  
Integration

Operations Reports

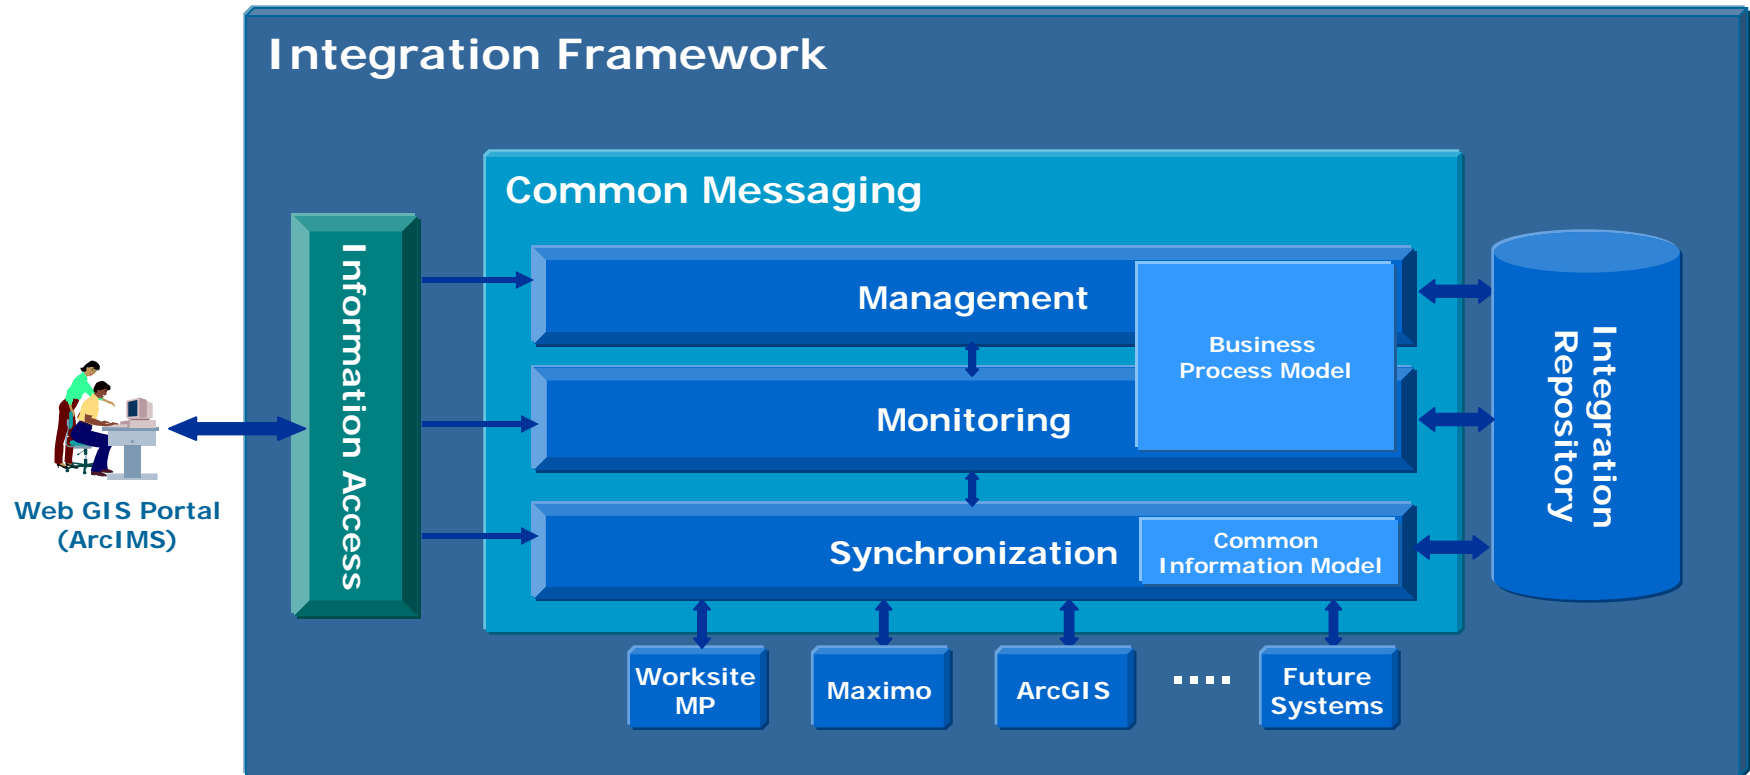

Month	Year	Area	Value	Unit	Notes
Jan	2008	Area A	100	sq ft	
Jan	2008	Area B	200	sq ft	
Jan	2008	Area C	300	sq ft	
Jan	2008	Area D	400	sq ft	
Jan	2008	Area E	500	sq ft	
Jan	2008	Area F	600	sq ft	
Jan	2008	Area G	700	sq ft	
Jan	2008	Area H	800	sq ft	
Jan	2008	Area I	900	sq ft	
Jan	2008	Area J	1000	sq ft	

# Work & Maintenance Management

- **MRO Maximo**
- **Organizes and schedules preventative maintenance work plans**
- **Implements workflow and key performance indicators for major WMM processes**
- **Integrated with the Asset Register/GIS**
- **Automatically synchronizes GIS asset hierarchies in Work & Maintenance Management and Content Management**

# Systems Integration

# A Platform for Future Integration

- Integration framework allows solution to be easily extended to encompass future integration requirements
- Enhance Web GIS
  - Access and display asset work related data (work history, asset failure data, asset maintenance costs)
  - Tighter integration with customer billing/CIS systems
- Mobile GIS for viewing and collecting asset related data in the field

# Summary of Benefits

- Improves communication and coordination between contractors and GWD staff during design and construction
- Contractors/consultants directly upload documents into the system, reducing the effort required by GWD staff
- Provides seamless transition of content from *project-centric* design/build to *asset-centric* operations/maintenance functions
- Provides a consistent asset organizational structure (asset hierarchy) across systems and workgroups
- Synchronizes data between core asset data systems (GIS, Work & Maintenance Management, and Content Management)
- Provides easy, integrated access to asset data via GIS-enabled information portal
