Platform Performance Baseline

The world we live in today is experiencing the benefits of rapid technology change. Technology advancements are directly impacting

platform increase, the memory requirements will increase to accommodate the additional concurrent user sessions. Heavier workflows can require more memory per session than lighter workflows. Servers must be configured with sufficient physical memory to take advantage of the higher platform processing capacity.

Figure 7-21 Geodatabase Server Platform Capacity is Changing

	Windows 2008 Server Standard, Enterprise & Datacenter (64-bit (EM64T))	Final

Physical Memory Limits: Windows Server 2008 R2

The following table specifies the limits on physical memory for Windows Server 2008 R2. Windows Server 2008 R2 is available only in 64-bit editions.

Version	Limit on X64	Limit on IA64
Windows Server 2008 R2 Datacenter	2 TB	
Windows Server 2008 R2 Enterprise	2 TB	
Windows Server 2008 R2 for Itanium-Based Systems		2 TB
Windows Server 2008 R2 Foundation		
Windows Server 2008 R2 Standard	32 GB	
Windows HPC Server 2008 R2	128 GB	
Windows Web Server 2008 R2	32 GB	

Compare Editions—Enterprise and Standard

Enterprise

SQL Server 2008 Enterprise is a comprehensive data platform that meets the high demands of enterprise online transaction processing and data warehousing applications.

Standard

SQL Server 2008 Standard is a complete data management and business intelligence platform providing best-in-class ease of use and manageability for running departmental applications.

KEY: = Full = Partial/Limited = Not Available

	SQL Server 2008 Enterprise Edition	SQL Server 2008 Standard Edition
Number of CPUs	OS Maximum	1
Scalability & Performance		
High Availability (Always On)

Welcome to the ArcSDE Post Installation for new geodatabases

ArcSDE for SqlServer

This setup helps you create a spatial database, an ArcSDE DBA user, set up the ArcSDE repository, and create the ArcSDE service.

☐ Complete _____

This helps you create a spatial database, an ArcSDE DBA user, setup the ArcSDE repository, and create the ArcSDE service.

☒ Custom _____

Use this option to select from the available Post Installation Setup options. This option is recommended for advanced users, or users upgrading their license keys of their ArcSDE service.

Next >

Cancel

Help

Select ArcSDE Setup Wizard Option

Select from the following options

- ☒ Define Database and SDE DBA User

Creates a Spatial database and SDE DBA user.

- ☒ Repository Setup

Sets up the repository. The SDE tablespace and user must already exist.

- ☒ Authorize ArcSDE

Select this option to register ArcSDE for use. This must be done for every new geodatabase.

- ☐ Create ArcSDE Service

Creates the ArcSDE service. The SDE tablespace, user, and SDE repository must already exist.

< Back

Next >

Cancel

Help

Select schema

Choose the schema for the spatial database

☐ DBO Schema

The repository objects will reside on the dbo schema, or be owned by the dbo user.

☒ SDE Schema

The repository objects will reside on the sde schema, or be owned by the sde user. Use this schema if you wish to create a multiple spatial database instance.

Help

ArcSDE for SqlServer authorization

ArcSDE for SqlServer

ArcSDE must be authorized before use. The process involves authorizing ArcSDE for use on your computer.

If the repository setup failed in any way, this may not be successful as a result.

Click Next to start the ArcSDE authorization wizard.

< Back

Next >

Cancel

Help

Authorization Options

You must authorize the software prior to use. Select from the options below.

Authorization Options

- ☐ I have installed my software and need to authorize it.
- ☒ I have received an authorization file from ESRI and am now ready to finish the authorization process.

r_offline_auth_files\Server_Ent_Adv_10.0_ECP_073011.ecp

Browse...

< Back

Next >

Cancel

Authorization Complete

You have authorized the following features:

bingmapsvr
arcgisserver
svradvanced
arcadeserver
svrenterprise
spatialserver

If you want to enter authorization information for any additional features, Click Back.

Congratulations, your software has been authorized and is now ready for use.

Users and Privileges

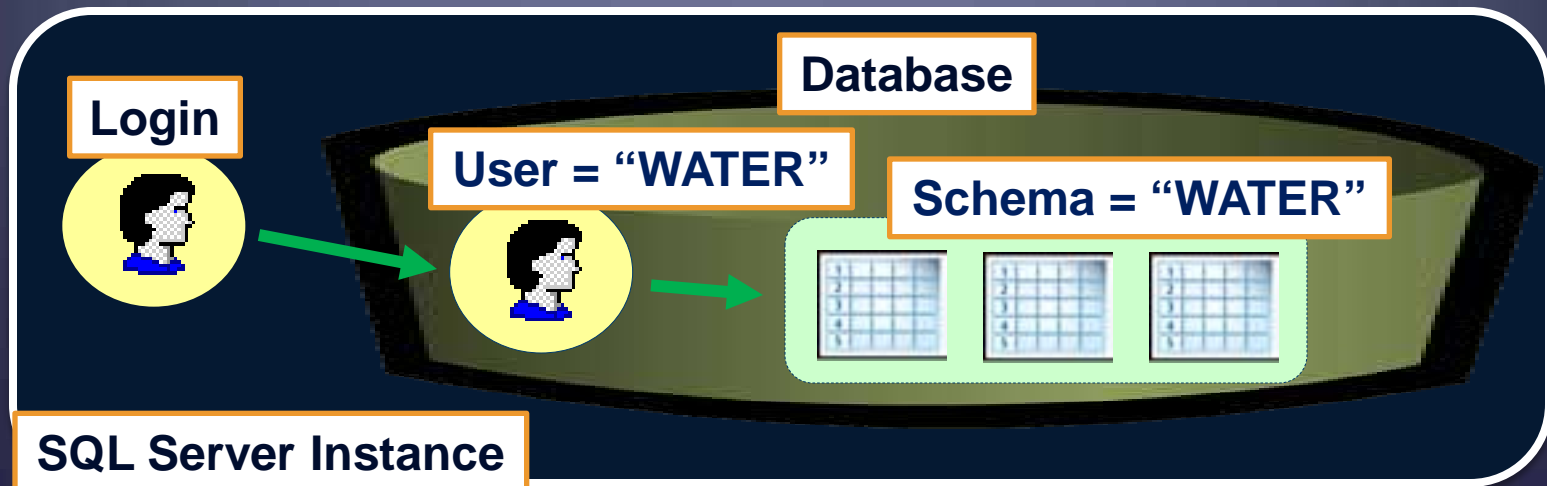

- u Login – Instance-level authentication to connect
- u User – Database-level authorization to access data
 - u A login is associated with a user in each database
- u Schema – Database-level logical grouping of data

ArcSDE Data Owners

Creating a data owner in SQL Server

1. Add a login to the instance
2. Create a user in the database
3. Associate the login to the user in database
4. Create a schema with a matching name
