

ArcGIS 3D Analyst – Publishing 3D Globe services

Sharing 3D GIS data can be done in a variety of ways, one of which is via 3D Globe services. This session will provide details on the types of 3D services that can be created, and an overview of the publishing process.

The session includes:

- When to create Globe services and when to use another sharing technique
- Key optimization techniques to investigate before publishing
- Definitions of the three different types of Globe services:
 - Rasterized services, Vector services, and Elevation services
- Recommended workflows for publishing new Globe services
- An overview of the supported client applications

All content is based on the publishing capabilities available with ArcGIS 10.
