Strengthening Global Midwifery with Better Data
Mapping headquarters locations for 131 autonomous midwives associations, in 113 countries.

These associations represent 7,821 midwifery educational institutions and over 500,000 of the estimated 1.1 million midwives in these countries.
Zoom in to explore midwifery dynamics in specific countries.

Look for detailed information in the side panels on key health indicators, midwifery education and midwifery regulations for that country.
Use the Map Layers to explore relationships between different factors of importance to midwifery in your country.
Which countries have the most midwives?
Which areas are at greatest risk of maternal mortality?
Which areas have the lowest rates of contraception and family planning?
Who has the greatest number of institutions for educating midwives?
Which countries are graduating the greatest numbers of midwives?
Data for the map comes primarily from member associations through an online survey.

The ICM Map Survey is available either directly through the map itself or as a separate link.
Use the Open Data Portal to download data in multiple formats and use it in your own applications.
Engage with stories of midwifery associations in action throughout the world.
Discover locations and profiles of midwifery educational institutions throughout the world.

Special thanks to everyone who made this project possible, including:

Jessica White  Direct Relief
Jessica Koval  Direct Relief
Janet Lewis  ICM
Martha Bokosi  ICM
Frances Ganges  ICM

Thank you as well to the initial round of countries who have completed the map survey:

South Africa
Argentina
Canada
Nepal
Ireland
Morocco
