## A powerful Python library for spatial analysis, mapping and GIS

ArcGIS API for Python is a Python library for working with maps and geospatial data, powered by web GIS. It provides simple and efficient tools for sophisticated vector and raster analysis, geocoding, map making, routing and directions, as well as for organizing and managing a GIS with users, groups and information items. In addition to working with your own data, the library enables access to ready to use maps and curated geographic data from Esri and other authoritative sources. It also integrates well with the scientific Python ecosystem and includes rich support for Pandas and Jupyter notebook.

Install the API | Get started | View samples

### Understand your GIS

This "hello world" style notebook shows how to get started with the GIS and visualize its contents.

> Get started with the GIS class

### Manage your GIS

The ArcGIS API for Python provides APIs and samples for ArcGIS Online administrators to manage their online organization.

> Clone a portal

### Perform Spatial Analysis

Call sophisticated spatial analysis tools that work with online content, using a few lines of code.

> Chennai floods analysis

# ArcGIS API for Python and ArcPy

## ArcGIS API for Python

- Script against a portal
  - ArcGIS Online or ArcGIS Enterprise
  - Python 3.x
- Analysis, Portal Admin, Content Creation, Big Data Analysis

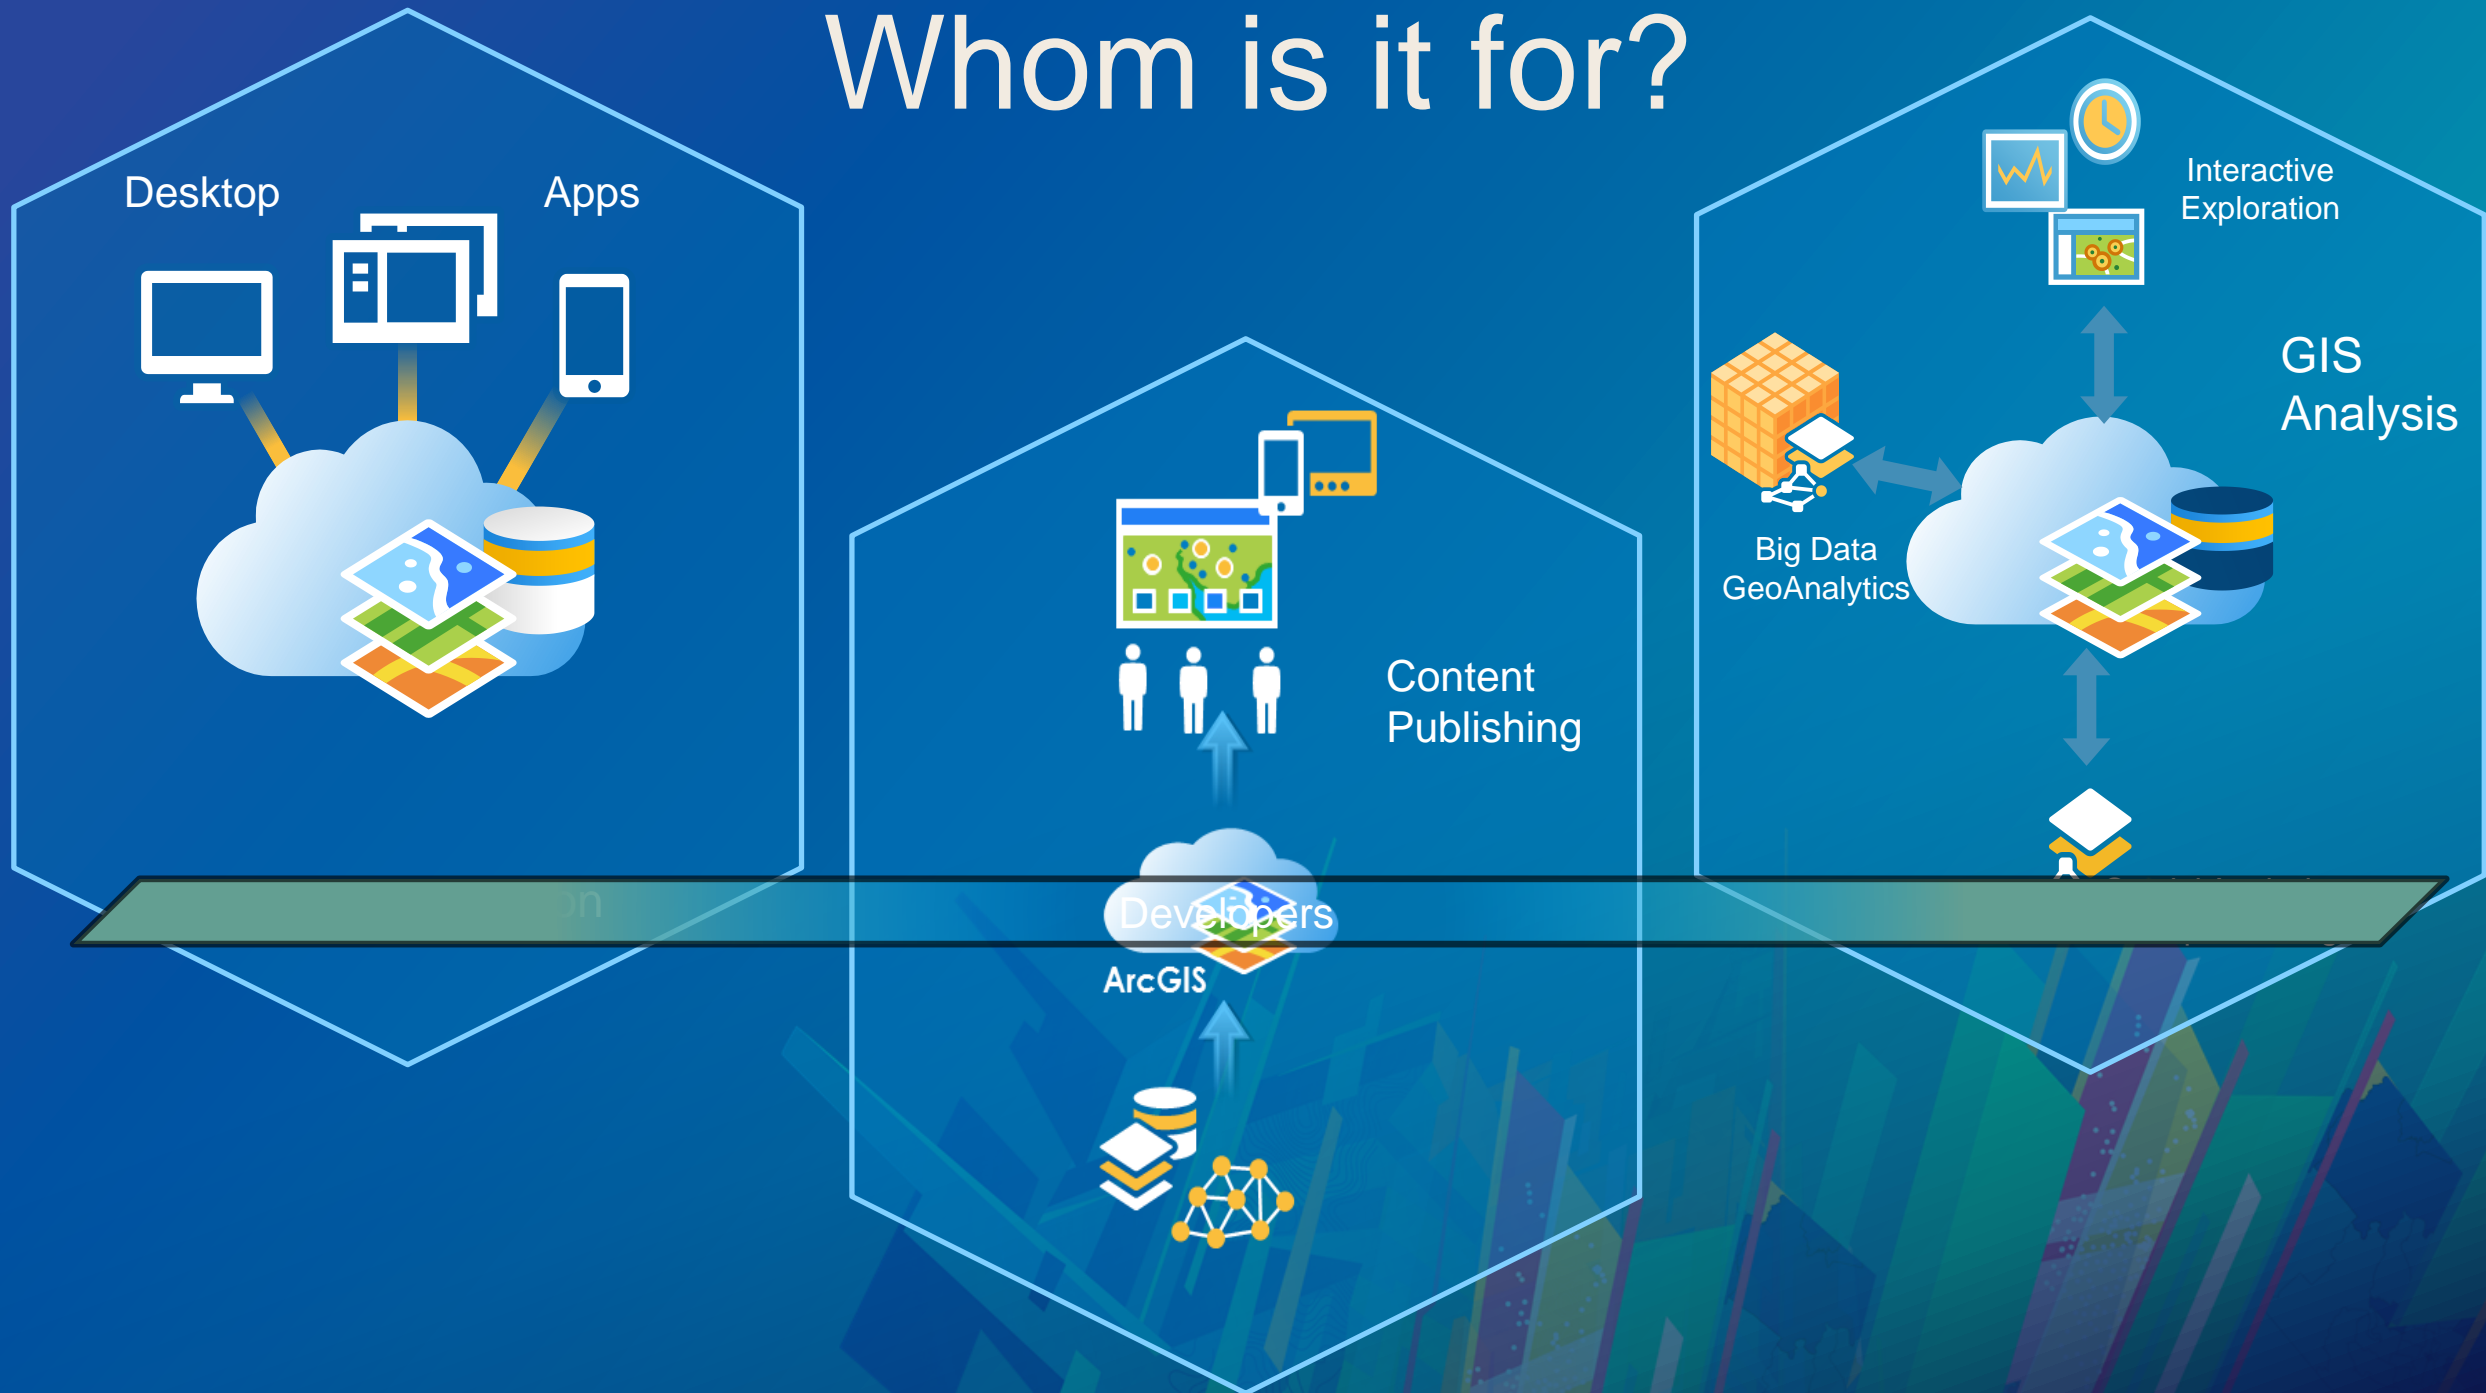

## ArcPy

- ArcGIS Desktop
  - ArcMap – Python 2.x
  - ArcGIS Pro – 3.x
- Mostly geoprocessing
- Some map automation

## **Four different groups working with the ArcGIS API for Python**

- **Org Administrators**
- **Content Publishers**
- **GIS Analysts and Data Scientists**
- **Power Users/Developers**

# Whom is it for?

### Automate Web GIS management

- Populate portal with users, groups
- Clone portals
- Re assign user content
- Perform comprehensive content search
- Determine item relationship
- Create reports of users, their items

### Automate content creation

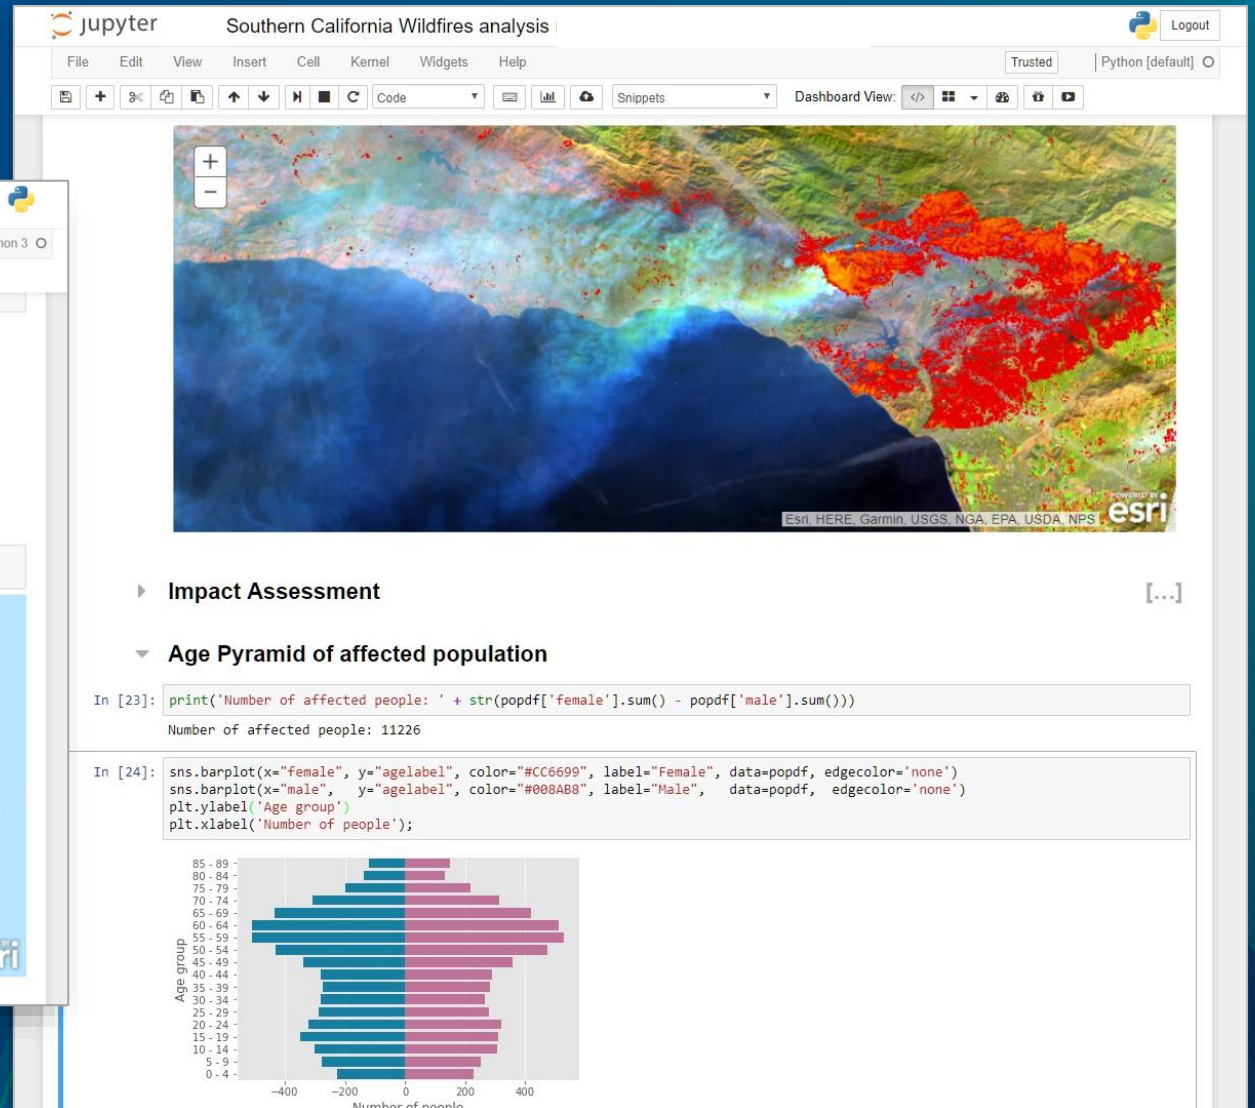

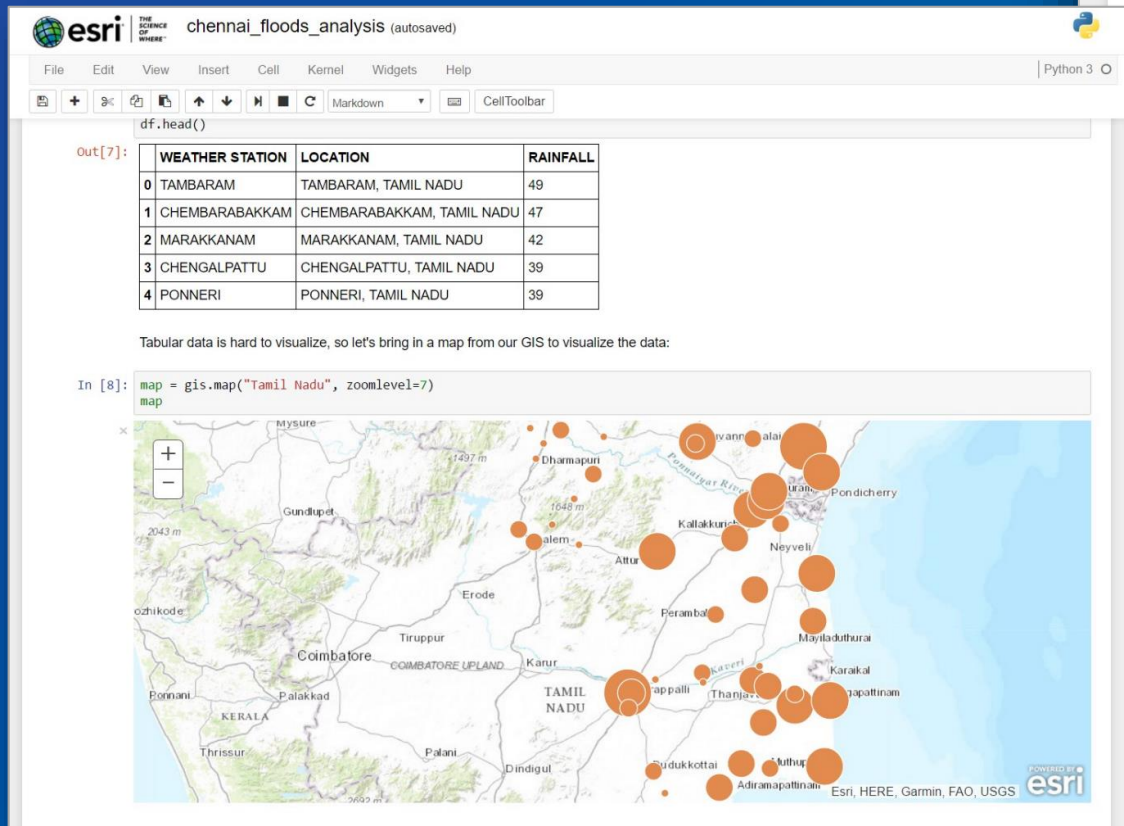

- Automate content publishing during off peak hours
- Update tiles and features from a known database
- Replicate development environment content to production
- Inspect and update items with broken service links

### Reproducible research

- Access big data tools programmatically
- Utilize rich 3<sup>rd</sup> party Python packages for data analysis
- Create rich charts, graphs, embed 2D and 3D maps in Jupyter Notebook environment
- Share your research with data and notes with peers

# ArcGIS + Jupyter = ❤️

# It all starts with your GIS

```
In [1]: from arcgis.gis import GIS
```

```
In [2]: gis = GIS('https://deldev.maps.arcgis.com', 'demo_deldev')
```

```
In [3]: enterprise = GIS('https://python.playground.esri.com/portal', 'arcgis_python',
```

## Search for content

```
In [34]: rest_content = gis.content.search("DC Restaurants", item_type= "Feature Layer", max_items=10)
rest_content
```

```
Out[34]: [<Item title:"Restaurants (Washington DC) HeatMap" type:Feature Layer Collection owner:cgabris_blueraster>,
<Item title:"DC_TapIt" type:Feature Layer Collection owner:mbass6_GISandData>,
<Item title:"Sidewalk Cafe" type:Feature Layer Collection owner:DCGISopendata>,
<Item title:"restaurants_dc" type:Feature Layer Collection owner:sfoss_solutions>,
<Item title:"Restaurants CSUSM AT_fieldworker" type:Feature Layer Collection owner:tanou001>,
<Item title:"Commercial Kitchen Food Incubator Space" type:Feature Layer Collection owner:DCGISopendata>,
<Item title:"restaurant" type:Feature Layer Collection owner:lkt_151119_lktmc>,
<Item title:"Parking Meters" type:Feature Layer Collection owner:Justin.Mank@SMGOV.NET_smgov>,
<Item title:"Restaurants (Washington DC)" type:Feature Layer Collection owner:cgabris_blueraster>,
<Item title:"New Business Openings in DC (2013)" type:Feature Layer Collection owner:wdcep>]
```

```
In [36]: from IPython.display import display
for item in rest_content:
    display(item)
```

### [Restaurants \(Washington DC\) HeatMap](#)

## Visualize layers on map widget

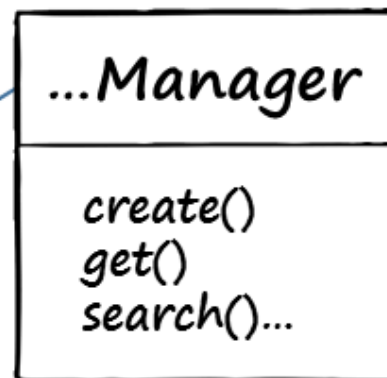

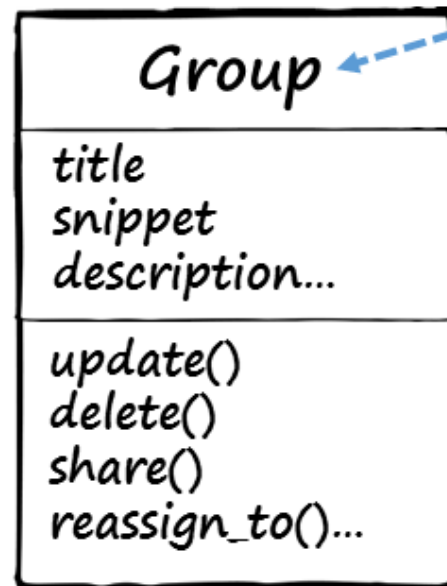

```
In [44]: map=gis.map("Washington, DC, USA")  
map
```

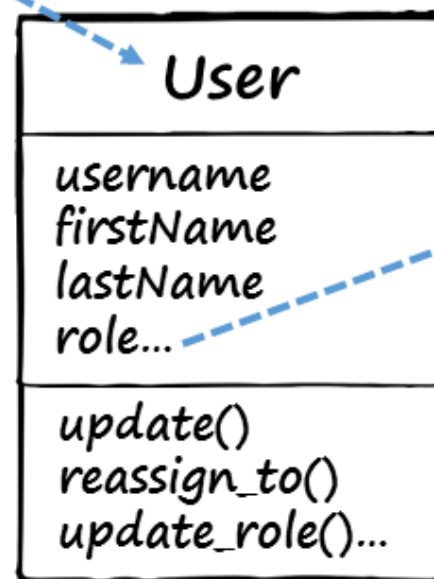

```
In [51]: rest=rest_content[2]  
map.add_layer(rest)
```

# GIS Module

get()  
search()

User

Role

# How do I get it?

- Try it Live! – <https://notebooks.esri.com>
  - ArcGIS Pro 2.3 – included
  - **pip** install arcgis
  - **conda install -c esri arcgis**
  - **docker pull esridocker/arcgis-api-python-notebook**
- 

```
<hello-map/>
```

# Different authentication schemes

- anonymous users
- built-in users
- users using LDAP, via
  - Basic authentication
  - Portal tier authentication
- users using Integrated Windows Authentication (IWA) through NTLM or Kerberos
- smart card users / PKI authentication using certificate and key files
- users connected to an ArcGIS Enterprise instance using ArcGIS Pro

# Workflows for Org Administrators

```
from IPython.display import display
for group in source_groups:
    target_group = copy_group(target, source, group)
    if target_group:
        display(target_group)
```

**Central Services**

**Summary:** The authoritative service catalog.

**Description:** This Group contains an inventory of map services for our organization. These map services serve as building blocks for all maps and apps throughout the organization.

**Owner:** admin

**Created:** April 04, 2017

**Compliance**

**Summary:** Regulatory compliance tracking & reporting.

**Description:** A group dealing with government and industry association regulatory compliance and reporting.

**Owner:** admin

**Created:** April 04, 2017

**Customer Service, Finance, Billing and Accounting**

**Summary:** The Water & Sewer Billing and Collection Division manage the water and sewer accounts for residents.

**Description:** Typical types of users and roles that part of this group: Human Resources/Payroll/Administrative Services Officer I, II, Administrative Aide/Accountant/Account Clerk/Payroll Clerk/Department Analyst/Risk Management Analyst I, II, III/Accounting Technician/Engineering Technician/Common Task or Responsibilities of the users in this group: Customer Service/Real Estate Services/Budgets/Accounting/Long Range Financial Planning/Safety/Risk Management/Financing/Records Management/Clerical Services/Auditing/Bill Collection and payment/Connections/Disconnects/Reduced Rates / Leak Adjustments/Pool Adjustment/Irrigation and Hydrant Meters/Employee Development

**Owner:** admin

**Created:** April 04, 2017

**Demographic Content**

**Summary:** Esri demographic data with national coverage

**Description:** A catalog of Esri provided demographic content for use at the utility.

**Owner:** admin

**Created:** April 04, 2017

# Workflows for Content Publishers

```
