

Introduction to the Web AppBuilder for ArcGIS

Jake Skinner

Solution Engineer, Philadelphia RO

jskinner@esri.com

What is Web AppBuilder?

- Web AppBuilder provides a foundation for building web applications in ArcGIS
- Build intuitive, focused apps that run anywhere, on any device, without writing a single line of code
- Integrated within ArcGIS Online and Portal for ArcGIS platforms
- Similar to ArcGIS Viewer for Flex & Silverlight Application Builders
 - Flash and Silverlight are being deprecated

Benefits:

- Create HTML/JavaScript apps that run on desktops, tablets, and smartphones
 - No plug-in required
- Build the apps you need using ready-to-use widgets
- Customize the look of your apps with configurable themes
- Host your apps online or run them on your own server
- Create custom app templates
- Extensible framework for developers to create widgets and themes (developer edition)
