## **Guaranteed Pavement Information System: Coordinating Disruption**

**Track:** State and Local Government

**Author(s):** Marion Storey

The City of Philadelphia Streets Department developed an application to allow Highways Right of Way managers to coordinate all street opening activity in the City. The application allows utility companies to input their work plans. It also allows the Highways Division to track it's resurfacing and street reconstruction activity. The application is constantly looking for scheduling overlaps and work that is planned during the one year guarantee period after resurfacing occurs. This allows Right of Way Managers to work with the utilities to reschedule work so that disruptions to the road surface and to citizens are minimized.
