

Abstract

Digital Imagery Solutions for Western GIS Communities

Track: Remote Sensing Imagery

Author(s): Jaymes Pardue

From satellite imagery to digital aerial photography, more GIS users are incorporating imagery into their every day applications. This presentation will discuss digital imaging technologies for the management of Federal, State and local governments in the Western United States. Multiple GIS and remote sensing applications will be discussed that are specific to western communities including growth management, transportation, and environmental applications. A case study featuring watershed and cadastral mapping applications in Los Angeles County will be included.
