GIS Supports Urban Planning in Prague

Track: State and Local Government

Author(s): Lukas Lebr, Jana Irova

The urban planning and city development in Prague has been taking advantage of GIS for nearly 10 years. The City Development Authority, as the municipal planning department, has successfully integrated GIS into the common planning process and gave users a powerful tool for exploration, analyses, and presentations. Although the core GIS application maintains the well structured and detailed City Master Plan 1:10,000, the attention has also been drawn to the development of tools in favor of more efficient and wider use of spatial information: intranet and Internet map applications, metadata catalogue, and other tools.
