

# Abstract

## **Facilities Inspection and Maintenance**

**Track:** Electric and Gas

**Author(s):** Graham Morgan

This paper will discuss the management of facility events recorded during scheduled or unscheduled work. Scheduled work (Programs) is defined as areas where work will take place. Events describe work done on targets associated with a specific facility or location. The paper will discuss how events are recorded, how targets are calculated and how exceptions (work that is not completed) are stored. The paper will also discuss how to link these events to facilities stored within ArcSDE or a personal geodatabase, and how a user might report upon programs utilizing the ArcGISs Crystal Reporting system.
