Enterprise Architecture for EGIS, Bureau of Land Management

Track: System Implementation for GIS

Author(s): James Scrivner, Jim Turner, Jerry Sempek

During the Spring and Summer of 2002 the BLM contracted with ESRI for an Architectural Study for Enterprise GIS. The architecture needed to accommodate day to day GIS operations and spatial applications deployed within the BLM (NILS, ePlanning, and others). This paper presents the results of a pilot phase in which the architecture underwent testing in real business situations in order to validate the recommended architectural solution.
