

Abstract

[LINK TO PAPER](#)

Enterprise GIS, Testing, Deploying and Training for Custom Software

Track: New Technology and Technology Integration

Author(s): Christopher Kroot, Michael Smith, Stuart Rich

Last year MDEP focused on the development, testing, deployment, and training plan for its custom Enterprise ArcGIS applications. This panel has four papers. Paper one summarizes the technical and functional architecture for Atlas Creation System, Query System (Linking ArcMap features to data in Oracle), and MOSIS (Maine Oil Spill Information System). Paper two discusses the testing environment, hardware and software policies, testing scenarios, documentation, and evaluation. Paper three focuses on deployment, scalability, implementing standards for data management and analysis, and preparing for storing files in the geodatabase.

Paper four focuses on development and delivery of custom ArcGIS training classes.
