Innovative Aspects of Property Maintenance

Track: Cadastral and Land Records

Author(s): Travis Smith, Steve Yoder

Johnson County, Kansas has been progressive in updating the quality of their land record data, even though they have yet to transition from tiled property coverages. These innovative procedures involve more than adding information to the parcel dataset; they redefine workflow and use existing resources to give new perspectives to the dataset. In the process they have created more efficient ways of retrieving and sharing data, including using engineering drawings, maintaining a complete spatial history, access to a comprehensive IMS application, and the ability to relate parcels lying in three-dimensional space--all of which improve the quality of the base layer.
