

# Abstract

## **High Accuracy GPS for GIS Data Collection**

**Track:** Surveying

**Author(s):** Myles Sutherland

Advancements in High Accuracy GPS are driven by the ever-increasing need for improved accuracy in GIS data. High Accuracy GPS can be defined in a multitude of ways, depending on the application the GIS data is employed in. However, often this consideration is not taken into account when determining the most appropriate solution for GIS data collection. The purpose of this paper is to discuss High Accuracy GPS and outline considerations in determining the most appropriate solution for your GIS data collection needs.
