MultiSpeak Integration Strategies

Track: Electric and Gas

Author(s): Tom Taber, Scott Koehler

MultiSpeak is a software interface specification that supports the sharing of specific information between software applications, such as GIS, that are common in rural electric authority (REA) and municipal utilities. This presentation will discuss the data modeling considerations, interface requirements and implementation issues involved in integrating MultiSpeak compliant software. The talk will focus on the MultiSpeak interfaces between GIS, Engineering Analysis tools, and Customer Information Systems (CIS).
