

Abstract

GIS Asset Management System Implementation for GASB34: City of Saco

Track: State and Local Government

Author(s): Gary Volta

To support GASB34 requirements, ArcGIS was integrated with Azteca Systems' Cityworks to develop a customized GIS asset management system. The City of Saco, Maine was one of the first seventy communities in the U.S. to adopt GASB34 using the modified approach. It has served to facilitate resource tracking and monitoring, financial reporting, and community responsiveness for multiple city departments. Saco's proactive approach resulted in early implementation and led to an improved bond rating upgrade which will save residents \$2 million over a 20 year period.
