AgriStats

Track: Agriculture

Author(s): Gavin Sulewski, Steven Couch, Thomas Fairhurst

The Potash & Phosphate Institute (PPI) and Potash & Phosphate Institute of Canada (PPIC) have developed a software application called AgriStats that tracks nutrient use data in the regions where PPI and PPIC have programs. ArcGIS software is used to support the interpretation and analysis of data contained in the AgriStats MS Access database. Maps generated show where nutrient use in crop production might be lacking, overall nutrient use within each region, and correlations between nutrient application rates and yields. This information helps PPI/PPIC regional directors focus their efforts in identifying potential nutrient use opportunities that will benefit the crop production system.
