

Abstract

Fleet of Feet: Keeping the Navy a Step Ahead Using Innovative Planning Tools

Track: Defense and Intelligence

Author(s): Brad Dailey, Dhruv Jain

The Regional Shore Infrastructure Planning (RSIP) program keeps the Navy "Fleet Footed" by developing long-term strategic plans for its facilities. This presentation looks at GIS tools and techniques being used as a decision support tool in the RSIP process. Spatial data is linked with facility level information to develop maps that identify the spatial relationships between buildings, and at an activity level. The maps also provide a visual comparison across the activities, and display relationships between facilities, constraints (natural, operational, or man-made) and natural features.
