

Abstract

GIS Emergency Management System (GEMS) 2.0

Track: Education

Author(s): Michael Thorne

GEMS is a geographic information systems-based Emergency Management tool that empowers the University of Redlands Department of Public Safety and Facilities Management and administration to develop and execute plans that respond to and recover from natural and human disasters. The focus of this presentation is the recovery module of GEMS 2.0 and how it will improve the efficiency of the University in responding and recovering from disasters.
