GIS Analyst

Transportation Department

THE TRIGGER:

2009 FHWA Retroreflectivity Requirements

May 2012 Revision

2014

Implement assessment/management method
only for regulatory & warning signs

2015

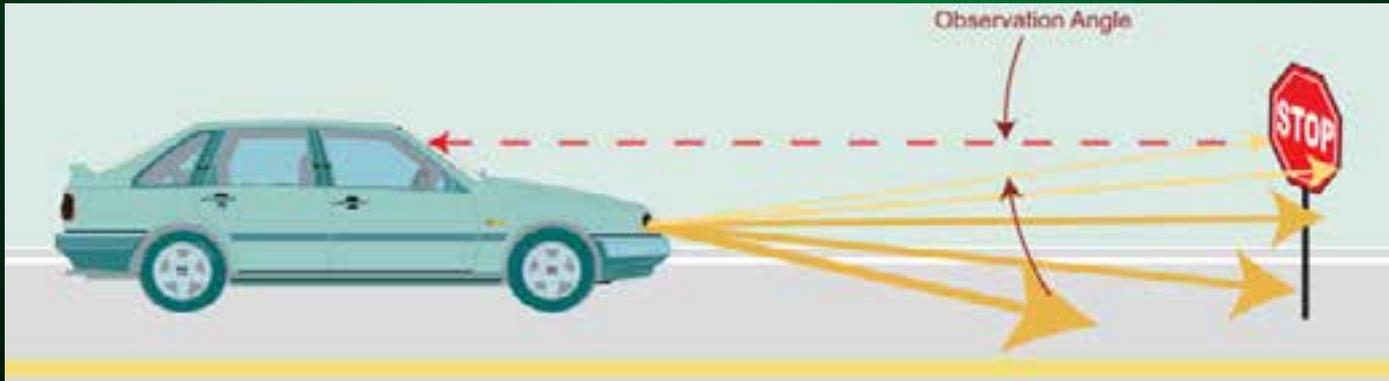

~~Replace all sub-standard signs (except street names)~~

2018

~~Replace all sub-standard street name signs~~

PREVIOUS MAINTENANCE METHOD

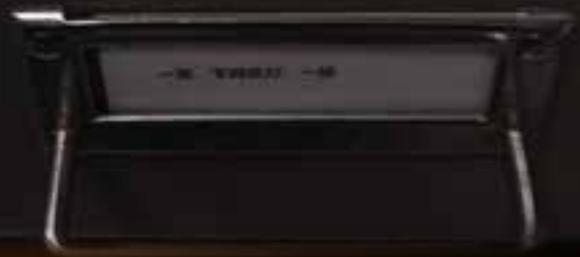

Authorized overtime to find substandard stop & yield signs using headlight illumination

But no management method in place to predict sign change-outs

Before we can manage our signs, we need to know what signs we have

HOW TO BUILD THE SIGN INVENTORY?

In-House

vs

Out-Source

- ESRI software & licenses already available enterprise-wide
- Inventory to be collected and maintained by sign shop staff, not engineers
- We do the work & we own the data
- Custom map and tools as requested by staff to reduce training time

- Purchase software & pay annual license fee per laptop/desktop
- “Built for transportation engineers by transportation engineers”
- Data ownership varies per company
- Factor time and money to train staff to new program and GUI

HOW TO BUILD THE SIGN INVENTORY?

FLEX

VS

GPS

Laptops/tablets = \$0
Air cards = \$

EQUIPMENT

GPS Receivers = \$\$\$

Live update to SDE

DATA

Download
(& post-process)

3" resolution aerials

ACCURACY

Depends on receiver,
surroundings, satellites

Mainly in vehicle

ESRI ArcGIS Flex API & Viewer

- Flex is designed to get a working web-based mapping application up and running quickly with minimal time spent coding
- Leverages great design tools from Adobe
- Uses pure HTML and JavaScript – no add-ins to your browser are required
- Created apps load fast and perform well
- Can create custom widgets for map behaviors, functionality, and layouts
- Design your own basemap from existing GIS data
- Design map layout the way YOU want it to look
